Yowza! Ok-Ok, I screwed up on that Pro-43. My Pro-39 has a little "reset" button in a teeny hole on the left side of the scanner. I thought maybe the Pro-43 had the same thing. I was wrong. Several posters advised me of that.

But thanks for running with it Jack! (Jeeez, cut me some slack JACK!)

: realize this may be a lame question, but new to scanning.
: Thanks,
: Tommy

Cordless is from 30.075 to 30.300 MHz in 25 KHz steps.
Cell is from 825 to 845 MHz for phone TX and 870 to 890 MHz for cell TX
in 30 KHz steps.

From: cdeviney@ipa.net
Message-ID: <35d3ae61.143326929@news2.ipa.net>
Source record: 147775

The Excel frequecny manager template, which can also be used to program a PRO-64 and/or PRO-2041, has been updated (08/06/98) with a few tweeks. The biggest change is that it will now program any bank, one bank at a time (or all 400 channels). It is available at Ken Plotkin's website:

http://www.access.digex.net/~kplotkin/scanner.htm

I must say, mine just came from there (uniden) and it's a great unit!
Looks and works like brand new, well worth the $175 + $5 shipping!

I bought a Uniden Exp95 Cordless Telephone. It is very clear and has a comfortable headset for hands-free operation. [I'm amazed that this type of phone hasn't caught on. It is one of my favorite pieces of black plastic]. It is 900MHz, but I know that it is not Digital Spread Spectrum. Is this phone easily scannable?

Your best choice would be to find a capable two-way unit and talk
someone in the radio shop into programming it as receive only!
If not plan on spending $300-$400 for a computer controlled radio
another $50-$100 or so for a scanner for the control chan and another
$150 for an old 486 66 to run it! ($300 if you want to be mobile with
an old laptop) ..oh yeah, another $20 or so for the dataslicer ($5 if
you build it)
Good luck!

group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally

generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot

be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test

results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated August 12, 1998 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 8 (Sat), Quincy, IL Western Illinois Amateur Radio Club Quincy, Illinois. Ham Radio and Computer SWAPFEST 1998 8:00AM to 2:00PM. The Western Illinois 1998 Swapfest will be held at the Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy, with easy access from US Highway 24. Admission is $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. Card Checking for ARRL awards at 9AM, 10AM, and 11AM. For additional information contact N9JF, jfunk@adams.net.

Aug 30 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $12.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 13 (Sun), Joliet, IL. Bolingbrook ARS. Inwood Recrea- |
tion Center. 3000 W. Jefferson St. Joliet, IL. Talkin on |
147.330 (+6020KHz), 224.540 (-1.6 KHz), and 146.820 (- |
600KHz). VE Testing 9AM-Noon. Outdoor flea market area (no |
charge for space) and indoor dealer tables ($8-$12). Admis- |
sion $5 at the gate. Gate opens at 8AM. For additional |
information contact N9GH at (630) 759-4955 or listen to the |
weekly BARS Net, Thurs at 8PM on 147.330 (+600) or 224.540 |
(-1.6). You can also E-Mail dshourd@juno.com.

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club.
Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127
North Monterey Ave., Norridge, IL 60656-3245. tel.
708-457-0966 (the biggest and best hamfest in northern IL -
AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of
DuPage, Main Arena of the Physical Education Building Park
Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5
admission with card, normal admission $6.00. Opens 9:30 am
- 3:00 pm.

Giant Computer shows are usually held at the Orland Park
Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or
at the DuPage County Fairgrounds, County Farm & Manchester
Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM
- 3 PM. To get on the mailing list or get more information,
call (847)974-3123. See http://www.gicancomputershow.com

I bought one here in Germany a while ago but I did not think that it
is so hard to get other IF- Filters with smaller bandwidth - because
IF-frequenc is 450 khz - to modify the hardware. It would improve
performance on shortwave a lot if one could change the 2,8 khz -filter
to a more narrow one with a good shape-factor.
Without the DSP- Unit UT-106 the sw-performance is like the Sony2010
(2001D). For SW- Listening the DSP-Unit is very good. But for the
digital modes there is an adjustable peak -or better doublepeak-filter-
missing. I hope it will be available in the future -maybe by programming
the DSP in another way ????- .

Yes, my dad's 42. I hope he doesn't "do it", and I've tried to ask him not to "do it", but he's only thinking of his own 'miserable future' rather than looking at his family's possible miserable future.

Steven Fritts wrote:

If it's an analog phone, then yes. If it is digital [with no encryption], then it is fairly easy with a decoder. If it is digital and encrypted, it is much harder. With spread spectrum, about 99.9% impossible.

SteveK wrote:

I will also add MAlexder to my small list of people who are really giving me
a hard time and bringing me beyond being only irritated.

Try using Cathy de Viney's instructions. When I tried Ken's, they didn't work
for me either, even with the right parts. Cathy's worked great!

Cathy's site has a link to it on Ken's site.

Barry: You must realize that *you aren't in America* -- there are different frequencies here.

Cellular phones operate at 824-849 (mobile) and 869-894 (tower). Cordless phone bases operate from 43.72 to 46.97.

For those who don't know what MS is, it is a a debilitating, myelin-eating disease that can progress to blindness and being a quadriplegic.

***** Look at what malexder@aol.com wrote (regarding my dad wanting to kill himself because of Multiple Sclerosis) !

malexder@aol.com said, "If I had a whiny, punk kid like you I would kill myself."

That was totally inappropriate, and that really saddens me, almost to the point of crying. If you would like to talk with this loser, his email address is malexder@aol.com.

Ryan Faricy

If I had a whiny, punk kid like you I would kill myself.

First of all, K Patterson's real email address is <kandtp@fiai.net>.

His comments are also inappropriate and saddening (just like loser
MAlexder's).

Some people just think of themselves, and themselves only. MAlexder and
K. Patterson are two of them -- they are Gods of selfishness and
stupidity. It just shows how INSENSITIVE they are to others' problems.

i seem to recall reading several articles over the years dealing with
this observation. i think that the conclusion was that RS reduced the
sensitivity on the 2004 to reduce intermod in urban environments from
pagers, etc. this change was noticed and complained about to RS which
then corrected it in the 2006....

2364. Scanning a EDACS system?

Newsgroup: rec.radio.scanner
Date: 1998-08-14 00:00:00 UTC
From: rnkimba@aol.com
Message-ID: <1998081401403900.VAA05354@ladder03.news.aol.com>
Source record: 147921

I really liked listening to the local public safety folks on my old scanner, then they swiched to something my husband said is called edacs. He said we need two new scanners and a computer. I really don't want to buy all kinds of stuff, but he said if we only buy one scanner, it would still need over $100 of work and we would have to put up with the water, sewer, schools and parks and everyone else.

QUESTION!
What is the bare minimun I can spend, or the very basic equipment to buy (It has to be plug and play, as neither of us is technical) so we can listen to the police and fire only. He wont let me tie up his computer, because it is our only source of income. I would also like to use the scanner in my car, but I don't want to lug all kkinds of stuff around.

Please help

2365. I want to recognize someone special!

I won't identify him publicly because he might not want to be recognized as being what I consider a good example of what we should see more of on this and other NG's and all around true scanner fanatic. I recently asked for help aquiring a manual for my newly purchased (at a yardsale) BC 760 XLT scanner. I received several replies from people telling me how to purchase one from Uniden, a couple of people were good enough to say they would sell me thier old manuals for a fair price and one guy who tried to convince me to hack into Uniden and steal it online! Well one individual stood up and did what I feel warranted this acknowlwedgement. Today I received a high quality, unfolded, correctly stapled photo cpoy of the manual I needed!!!!! I was thrilled because I am on a limited budget and sinply couldn't afford the minimal ammount Uniden wanted for the manual. This person, using his own money copied the manual, placed it in a correctly sized envelope, placed neatly written lables, both e return and addresseand paid the going US Postal rate to ship it to me... first class even! Now I know this person had to take time out of their schedule to do all these things, had to take the time to actually "DO" what he said he would do and did it within a few days of saying he would. Well to say the least I am impressed and plan on paying back what this gentleman did for me. You see my job just picked back up again, I am working now and can afford to do something in return for the good deed done for me. You can expect $15.00 in the mail on payday sir, you have earned it! And I wish that more people like you still lived in America, if they didwe wouldn't be going to hell in a hand basket and getting no better. Thank you and God Bless you...

In an effort to assist with MTrunk/Trunker & ETrunk usage a new mailing list
has been set up.

Trunker

This list is for the discussion of the MTrunk aka Trunker and the ETrunk
trunking radio control data channel decoding programs. Discussion on how to use
MTrunk & ETrunk along with information on Motorola & E/GE EDACS TRS systems is
welcome.

You can subscribe by going to the MTrunk & ETrunk Home Page at:
http://www.geocities.com/CapeCanaveral/Lab/1060/trnkv3x.htm

You can also subscribe by following the link below:
http://www.onelist.com/subscribe.cgi/trunker

Look forward to seeing all the MTrunk & ETrunk Users!

I am Geek Spice, who do you wannabe?

Today, aug 15th, many stations were heard by SpE.
As I mentioned before, US English was audible on 37.250 Mhz.
Now I also heard on 44.675 British English with radiochecks "Tango one zero".
Also digital noise on this frequency.

Message-ID: <35d58c88.17263202@news.wxs.nl>
Source record: 147579

At this time 10.30 UTC I am listening to a lot of SpE on the OIRT bands, but also between 30 and 50 MHz.
I wonder what is this:
American English on 37.250 FMn : call sign "India zero one" and talks on a speedboat, coastguard, a harbour and a beach full of civilians 9(US Navy??).
This type of communications remember me on the reception of US Navy between 30 and 50 Mhz and F2 conditions during the last high sunspot activity.
Can anybody help?
Max, The Netherlands

2373. Re: OPINIONS Wanted For PRO-90 TRUNKTRACKER

Newsgroup: rec.radio.scanner
Date: 1998-08-15 00:00:00 UTC
From: Joe Morris <jmorris@i-55.com>
Message-ID: <01bdc87e$0ecea4a0$3765e7d0@default>
Source record: 147580

I have a Pro-60 and a Pro-90 (Trunktracker). The Pro-90 seems to me to have a better speaker and better display. The display is more visible in existing light, and the backlight display stays on for 5 sec. when the light button is pushed. The Pro-90 also has 300 channels (30 per bank). It is easier to input frequencies as well: there are fewer steps and the numeric pad has oversized round keys for ease of data entry.

The trunking features are very powerful. You scan one talk group ID or several at a time (as long as they are in the same bank). You can even lockout certain IDs.

You can always scan frequencies in the traditional way--even the ones entered in your trunking bank(s). I am very please with my Pro-90 so far.

The only thing I'm not totally happy with is the car adapter (optional). The Pro-90 comes with an AC adapter charger. My car adapter for my Pro-60 won't work on the 90 becauase the 90 runs on 12 volts, where the 60 runs on 9 volts. In addition, the recommended 12v car adapter from RS is actually an adapter for a radar detector (270-031). The 1.3mm plug is long and does not seat into the scanner with a definite click. It appears as if it the coiled cord could pull out from the scanner with a little pressure.

Just my $.02.

Joe

Mine also continued to beep after changing the battery. The problem was the battery connector terminals were spread apart and not making good contact. I removed the battery, crimped up the "acorn" terminal and reinstalled the battery. Make sure you get a tight snap on both terminals.

Military narrow band FM frequencies, mainly PRC-77 transcievers used by
ground troops and support boats or aircraft.

Mostly likely training exercise involving National Guard or Reserve units in
Joint Services Operation.

English military also uses same band.

Sure! Give me a time (please send by email) and I shall try to get on
the air then. I know that I will be unavailable from 9:30am to 1:00pm,
but otherwise, I should be home all day.

Hopefully, there won't be a Weather Net going on then. There may be some
strong storms building here around 4-6 pm.

I apologize for this message, but this must be cleared up.

It seems that a couple people here think I don't exist. Well, I do. Don't believe it? Ask Ed Walsh, KC0CKK by emailing him at emw-1@att.net (we even use the same online service). I exist as much as all of you exist.

My QRZ address information is all correct (except my 4 digit appendage to my zip code -- it really is 2946), I was born August 10, of 1982, I just turned 16 five days ago, I live near Edina with my mom.

I've talked with Ed several times on the repeater here in the Twin Cities.

In article 357a93d4.269548@news k5kip@qsl.net (Kip Chatterson) wrote I need help with a bearcat '250 it is stuck on 51.175.
It will scan
I can enter freq but can't write it to memory.'

Did anybody reply to this message. I also have a bearcat 250, which exhibits the same fault, which I have been unable to fix.

Have tried to email Kip Chatterson but e-mail returned as not known on server.

Also does anybody have an e-mail or fax address for newly incorporated Electra Corporation in Cumberland IN for the purpose of obtaining service manuals for the Bearcat 250 and 20/20 scanners?

Any information would be appreciated.
Pse e-mail me at warrmack@fl.net.au

I am not sure if any of the Radio Shacks have any left, but I just picked up a PRO2040 on closeout for $89.95. This scanner regularly goes for $229.99. I thought this was a pretty good deal.

They also have thier PRO2046 mobile scanner on closeout for $69.95 which is normally $229.99. Thats a really great deal on a fine mobile scanner.

: > work well?

Brian, your best bet is to just get the external powered speaker from Radio Shack. Part #21-541 $24.99. It uses 12VDC. This is a great speaker.

They also make an unpowered version, 21-549 which sounds excellent and might be loud enough for you even without the amp. I like these little speakers so much that I screwed the mounting bracket to a small piece of nice pine and I use it for my table-top scanner in the house. These are definately great communication speakers.

Source record: 147681

>If anyone comes up with specific discrete frequencies assigned to the
>tropical weather program, please let me know.

The three acft that have been working the last few days are:
NASA 806, the ER-2 (i.e., U-2)
NASA 817, the DC-8
N77ND, the U of N Dak Citation.
The freqs are:
133.75 Patrick Twr
134.95 Patrick Appr/Dep N
126.65 CCAS Grd Ops-Air (main freq)
378.8 ER-2 Discrete for Patrick

The ER-2 operates at 50-60,000 feet; the DC-8 operates at 36,000 feet.
Yesterday I heard the Citation work up to 31,000 feet.

Tomorrow, Sat 98/8/15 the ER-2 and DC-8 will take off at 1430 local and work until 1930 local. The Citation will take off at 1530 local and work until 1830 local.

>> First of all, K Patterson's real email address is <kandtp@fiai.net>.

Yes it is! Its the only one I have ever had. Except that a year ago it was just kandtp@fia.net. The service changed hands. I have never disguised my address, I just clicked on one of my posts and it came up as the one Ryan mentioned.

>> His comments are also inappropriate and saddening (just like loser
>> MAlexder's).

The post Ryan is refering to below was sent from an AOL account (looks like to me) I do not have AOL. Its not my post. Believe me or not, I guess I don't care. But none of that was my doing! Looks like it came from CA. I live in Iowa. On second thought ,this does makes me a bit upset that people may think I wrote this. I am not perfect, but I'm no jerk. And I am not mean spirited. Had I known of Ryans "situation" I would have never replied to him at all.

>> Some people just think of themselves, and themselves only. MAlexder and
>> K. Patterson are two of them -- they are Gods of selfishness and
>> stupidity. It just shows how INSENSITIVE they are to others' problems.

Insensitivity? You wrote me that VERY mean e-mail, and you can call others insensitive? Some one used my name Ryan. Plain and simple. I don't expect an appology, lets just drop the whole thing.

2416. LSP Trunk Tracking Problem

Newsgroup: rec.radio.scanner
Date: 1998-08-15 00:00:00 UTC
From: Joe Morris <jmorris@i-55.com>
Message-ID: <01bdc80c$0f1c0820$7464e7d0@default>
Source record: 147686

Hi Anyone in South Louisiana:

I recently purchased a RS Pro-90 primarily for scanning the Louisiana State Police who use the Motorola Type II Smartzone System. I have obtained the frequencies from several internet sources for confirmation. I can trunk track the Baton Rouge area O.K., but I'm having trouble tracking the Hamond Site. The frequencies listed by several sources are 866.1023, 866.1750, 866.7500 (DATA), 867.2750, and 868.8375. I am fairly sure I have programmed the frequencies into the scanner correctly. When starting the trunking mode on the bank in which I have these frequencies the scanner searches for the data channel but never finds it. It just keeps searching. When scanning these same frequencies in the conventional way (not trunk tracking), all of the traffic appears to be on 866.75, supposedly the data channel. I am new to trunk tracking, but have thoroughly read the Pro-90 manual. Could it be that the Hammond Site is not yet using the trunking system with these frequencies? Are there more frequencies that have not yet been identified (including the data channel)? Am I doing something wrong?

Any suggestions or theories would be appreciated. Thanks.

Joe

I got a Radio Shack PRO-23 and i got a problem with it. First of all, it powers on, and scans the bank channels but i can't pick up anything. I've also done a scan of freq ranges and don't get anything either. I've checked the antenna and tried another, as well as cracking it open and resoldering the connections, still nothing.

Does anyone have an idea of what could be causing this and how i go about fixing it?

Dave,

Interesting review, thanks.

I just wanted to add a note re. something you mention on your review page re. the Saitek Charger (I have one from Real Goods, which is called ECO Charger, but it's the Saitek - it says so on the bottom).

I've been using it for NiCads for about 9 months and it's great! I also top up my alkaline batteries with it. The readout shows charging time nicely and it discharges NiCads before re-charging.

I was told by Real Goods last week that it might not do a full charge on NiMh batteries - (I've just bought a Nikon Coolpix 900 camera and am switching to metal hydride for that) so I found your review of interest.

The cells cool down during the top-off period, so if you're going to judge
temperature the only accurate way to do it is to interrupt the charging
and pop the top at the end of the fast-charge to look for hot potatoes.
(Or tape the lid latch down so it thinks it's closed, and leave it open).

> Thank you,

No need to move any resistors. Put away your soldering iron. Surf yourself
over to http://hoth.gcn.ou.edu/~jahern/home/pcr1000/ and follow the links to
Patrick Masotta's downloadable EEPROM backup/restore utility. Not only will
it backup your EEPROM data, but the restore has some interesting capabilities
to modify the 'nationality' of your bandplan. Enjoy! Just be safe and keep
a copy of the original EEPROM data file it creates so you can always get it
back to OEM setups.

I have one and think it's a great deal especially at $199. You will
only be able to scan trunk systems using Motorola Equipment. If they
use G.E. as they do in the Tucson area, you won't be able to follow
the conversation. If the trunking technology changes, you'll still
have a good scanner for general use in non-trunked systems (probably
90% of all systems are non-trunked.

Set your scanner volume to about 50%, and set the Line In volume to just
about the second notch. This works ok for me.

How much money do you want to spend? For racing you might try the Uniden Sportcat or the new Relm (www.strongsignals.net for more info). Some RS scanners are good; some aren't.

It's also about a "bunch of geeks" that like to meet and talk to people from all over the world. It's also about helping in times of disasters. It's about electronics,antennas,digital communications,propagation,satellites,etc.

Yhea, we've heard of cell phones. You can have them. I'm not to keen on paying the prices they want to use them. A few short years ago nobody had them or needed them, now they are another fad that people like to follow. Like pagers.

Ham radio is a lot of fun.

I also own a PCR1000 with DSP-unit UT-106 and it works very fine on voice.-stations. It seems to be equal with the Sony 2010/2001D I own also.
But to to get better performance on the digital modes I`m lookink for better IF-Filters with 450 khz centre-frequency and Bandwidth 2,4khz or less with god shape-factor of 2.5 or better. - It seems to be available nowhere :-(((-
I have modified my Sony with better and switchable IF-filters and switchable AGC and that works very fine.
On the PCR1000 I changed the 6khz -filter to a one with 4khz (MURATA CFWS 450 IT) .
The 15 khz-filter I kicked off and put the 6khz-filter in. It seems to me with this changes I have less noise over all.

Now I`m looking for to upgrade my software to show the new filterbandwidth`s.

IS THERE ANYONE TO FIX THE PCR1000.EXE ???

Have a look at PCR1000 mailing list on
http://www.qth.net

it is a must for all PCR1000 owners

best regards

2470. If police go undercover, so will WE....

Newsgroup: rec.radio.scanner
Date: 1998-08-16 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <35d8e766.81726754@news.mindspring.com>
Source record: 147540

Well we aren't REALLY going "undercover" ourselves. Actually I am happy to announce that the cause of open broadcasting has signed up with LISTBOT.COM to produce its own listserv. So we aren't going undercover, but we are going to be unified under one communication method like never before.

Open broadcasting advocates the maintenance of open public safety radio systems in this era of trunking and digitalization. Our suggestion is that open systems increase public and officer safety, lower the crime rate, and maintain trust between police and the community, particularly as many police departments now tout community policing principles.

If you want to join the discussion list or learn more about this issue, visit:

http://members.aol.com/truth4000/page1.htm

To sign up for the discussion list, use the form there so presented.

Joe,

Try scanning the entire range from 851-868.9875 and see if you can find any data channel in that area. It might be possible that you can't receive the Smartzone site you think you are receiving. Write down all the data channels that you find in the area, and then cross check those frequencies with the FCC licenses....or poste'm here and I'll help

Date: 1998-08-16 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19980816152300001.LAA16681@ladder01.news.aol.com>
Source record: 147545

Suggested likely frequencies for airshow listening. Chicago Lakefront Air & Water Show Sat/Sun, Aug 22, 23. Note: Good listening will start about Wednesday. There may be a media show at Meigs Thursday morning. Theres a Park District show at the main site on Friday. Blue Angels will likely have spotters flying on Wednesday. If anyone spots or hears them in the area please post here, or on the carma list ASAP. Thanks.

123.100 / 319.850 Show Platform Control
121.300 / 257.800 Meigs Tower
134.400 / 308.400 Show Arrival / Departure
120.550 / 290.200 Show Arrival / Departure

126.800 Chicago Radar
134.100 Chicago Radar
122.725 Show Discrete
122.150 Meigs FSS
126.200 Ohare USAF
384.900 Ohare Tanker Command Post
372.200 Ohare Pilot Dispatch USAF
143.800 Ohare USAF (AM)
311.000 ACC Primary
321.000 ACC Secondary
364.200 USAF AICC Primary
303.000 USAF Air-Air
255.400 USAF Flight Service Stations
123.450 Chit-Chat
123.475 Golden Knights
126.050 Meigs Arrival / Departure
148.150 Civil Air Patrol
397.850 Past use as alternate platform UHF freq
045.920 Lifeguards
145.770 (151.4) CARMA Simplex
123.050 Copters
122.750 Misc Air-Air
453.775 (107.2) Police Towing

-All the Marine Channels, especially Coast Guard stuff
-All the Park District Channels, including Lincoln Park Zoo
-All the Chicago Police Citywides
-All the CTA Channels
-All the media Channels
-All the Chicago Center ARTCC stuff
-All other area air traffic control
-All the business itinerant channel at the site

-The 640A/B MINNOW MOA Training area over the lake is often active before, during and after the show, for refuelling, holding and practice. Check:

298.775 BROCHURE Primary
283.775 BROCHURE Secondary
396.900 Air-Air Tac
305.500 640A Refuel Primary
291.900 640B Refuel Primary
320.900 640 A/B Refuel Secondary

Additional military UHF channels needed by the show are often drawn from the same frequency pool used at Wisconsin's Volk Field training facility. Possibilities:

319.850 (usually used for platform w/123.100)
322.450
327.050
335.550
343.750
346.250
348.650
370.950
377.050
(hot freqs year round anyway)

BLUE ANGELS 1998:

Confirmed this year:

164.900 (000.0) Ground Support / Spotters
168.900 (000.0) Ground Secondary (NFM Mode)
170.900 (000.0) Ground Primary (NFM Mode)
238.150 (000.0) Formation Air to Air (AM Mode)
263.350 (000.0) Air to Air Tac (AM Mode)
275.350 (000.0) Solos 1 & 4 (AM Mode)
345.900 (000.0) Air to Air Tac (AM Mode)

Others used last 5 years:

142.000, 143.000, 235.500, 235.600, 251.600, 302.150, 384.400

-At least 3 other VHF NBFM channels in their handhelds (162-174 Mhz) remain unfound.

-If you are coming to the show on Saturday or Sunday, you should be aware that this is the largest spectator event in the country, and usually draws over 2 MILLION people. Forget about parking in the area much after 9 AM. If you park illegally anywhere within miles your car will be towed to a city auto pound, not a fun place for your car to be. Show center is the beach at North Avenue, just east of Lake Shore Drive. Take public transportation. Dont bring your dog or bike. Young children will need hearing protection and everyone will need sun block. Food concessions do what they can, but you might be better off bringing lunch.

-Happy Scanning! - Ted

I was refering to scanner software in general. Not CE232 software exclusively.
I only know of 2 programs for the CE232 the original and the new Pro Turbo. Ira

Your comment "The world moves on" strikes me as strange. You speak
as though Bill and John are no longer with us. Do you have percipient
knowledge that you might share with us less privileged readers? Do
they sleep with the fishes, perhaps?

I guess people like you have nothing better to do than fight with other people... If it really bothers you that I didn't post any prices than why are you even taking the time to read my message. I haven't had any complaints from anybody else, not to mention that there are a lot of people doing the same thing. If you want to complain and fight with someone why don't you try the postings that everybody else is arguing about , AND LEAVE PEOPLE THAT ARE NOT DOING ANYTHING WRONG ALONE!!!!

Hi Pat:

Well, this will be my first post so I hope everything goes well.

Read your request for the "most accurate clock." I don't have any information where you can get an old Heathkit which they don't make anymore, but I have some information that will give you a big jump in the correct time into the 21st century. And you don't have to put it together and suffer the agony if it doesn't work.

Would you believe that there is a watch that has a built in radio receiver that works in the VLF range and receives a signal from the atomic clock in Fort Collins, Colorado. The accuracy of this arrangement will give you billionths of a second over a million years. Can't beat that!

They have a web site that you can connect to: http://www.arctime.com. I will give you a little tip. I just received a flyer from them and they have a $79 watch that is not listed at the web site. That might be a price range that is hard to beat. They call it a digital sport watch. Check it out.

I have owned the desk clock for over a year now, and all the watches and clocks have the same time, because I reference this clock to the others. Pretty neat stuff.....

I have always been a bug about the correct time, but not being on time.....

See Ya!!!

And this rambling of bullshit is better than Bill Cheeks postings....how? How is this any different than Bills "abuse" of this group?

Bill may have posted some off topic junk that didn't belong here, but he also posts relevant scanning information almost daily on this group. Something I have yet to see from you. Is that just coincidence, or is there more to it than that? Perhaps you are just one more of the many who come here with the sole intention of stirring the flames?

We shall see. In any case, don't bother to send a seething reply, as I will only ignore it and you.

But, if you post something about scanning, that would be worth reading. Do let me know if that happens would ya? Thanks.

-Phil

The best way would be to call them. However, at the end of EDACS (Ericsson) transmissions, there is a two-second hang with 4 beeps.

I believe on a Motorola system, there is a half-second data burst at the beginning of transmissions.

Hmmm. Well, then you know nothing about ham radio.

I've got a cell phone, pager, etc. Ham radio is more than about talking for free. Remember, you can talk to people halfway around the world with only 5 watts of power (QRP)!

I see that your efforts have finally borne fruit, after 3+ years of stalking, skulking, lurking, forging, flaming, whining, bitching, lying, complaining, etc. Even though it's cost your lots of money, several ISP accounts and your own personal reputation, you persevered. Bill Cheek has finally lost his ISP account and is, for the moment at least, "off the air".

How does that make you feel? Are you happy with yourself? I certainly hope so.

I have to admit my dissapointment, however. I was really hoping that when you finally had savored your little victory, that you would knock off the crap and focus on the topic at hand. In case you have forgotten, that topic is scanners.

But, when I looked in here, this is just a small sampling of what I have seen:

This post, from you:

>Subject: ATTENTION ALL!
>Date: Thu, 13 Aug 1998 02:19:53 GMT
>From: "J Mackey - NEW E-MAIL ADDRESS!" <bbowers@parg.org>

>while YOU are using a BOGUS address, lying to the internet everytime
>you post from that address!
>
>In other words, shut your lying mouth!
>
>> Pottersville_Amateur Radio Group
>> Live from P_ARG!!

Now, I admit that I may be a little slow at times John, but even I can see the hypocrisy at work here. First a call to "stop the insanity" followed by more of your incessant flaming. No doubt mass denials will follow, perhaps you will claim these are forges, perhaps you will claim insanity, who knows, but one thing remains clear. You will continue to harass and harangue the users of this group until there are none. That is your ultimate goal.

So I will help you achieve your goal! In fact I encourage all serious scanner users to do the same. Let's all help John Mackey in his quest to empty rec.radio.scanner of all value and integrity.

Let's leave.

I'll be the first to follow this advice. From this point forward I will read, reply and post only in alt.radio.scanner, leaving rec.radio.scanner to John Mackey and his special brand of cretin friends. They can stay over here, and we can stay over there. Sure, there's almost nothing that can keep him and his pals out, but then again maybe there is.

We can all be adults and ignore their crap. Once they notice they no longer have an audience they will most likely stop. And even if they don't, who the hell cares. Not me. I won't even notice.

See you serious scanner types in a.r.s. As for you John, if I never see another crap posting from you, it'll be too soon.

Unsubscribing and signing off,
-Phil

On the BC3000XLT, you can also receive the audio portion of TV broadcasts. Very helpful on long drives when you want to hear evenings news or any other programs that you normally watch on TV.

Big Bad Berticus sends (Lasagna Hamburger Helper is quite delicious...)

From: allanstern@aol.com
Message-ID: <1998081600083800.UAA27316@ladder01.news.aol.com>
Source record: 147615

I tossed together this list together for several people who have asked me for a list of the principal Patrick AFB freqs. The reason I say "tossed together" is that I really want to complete my more comprehensive list, which will update the many Shuttle-related freq lists that have been added to and copied to many Web sites, but have never been edited and corrected. It is taking me longer to complete my Shuttle Freqs project, because (to be honest) I am having so much fun monitoring JSTARS, NASA acft (and now the ER-2!!), Avon Park ACM. and all the other Military aircraft monitoring opportunities in this wonderful area. I am therefore posting this listing of the basic Patrick Area Mil Acft freqs, so that if anyone is planning a trip to this area, they have some starting point.

The principal freqs for Patrick (KCOF):
133.75/ 348.4 Patrick Tower
132.65/ 340.9 Patrick Appr/Dep South
134.95/ 358.3 Patrick Appr/Dep North
118.4/ 289.4 Clearance Delivery
138.3/ 383.0 Command Post
122.85/ 372.2 Base Ops/PTD
124.35/ 335.8 Ground Control
344.6 PMSV:Metro
173.125 Transient Alert
121.05 Appr/Dep Discrete
127.85 Appr/Dep Discrete
165.1625 POL
149.3 Maintenance Ops Ctr
148.095/ 321.0/ 251.9 920RQG Ops

For Cape Canaveral Air Station (KXMR)
118.625/ 393.0 Skid Strip Twr

For NASA-KSC Shuttle Landing Facilty (X68)
128.55/ 284.0 Tower

For Melbourne IAP (JSTARS):
118.2/ 257.8 Tower
121.9 Ground Ctrl

I hope this is of use to some of you.

From: aa186@freenet.akron.oh.us
Message-ID: <ExrEox.7Dq@freenet.akron.oh.us>
Source record: 147620

I have a pro 34 that I just got and the sensitivity is rather poor.

Any ideas as to what the problem might be?
I am going to have a look at the antenna connections again,
but beyond that, I don't know.

Is there a screw to adjust for sensitivity?

Thanks,
Michael

CELLPHONE HACKERS TACKLE GARAGE DOOR OPENERS

Dallas, TX, March 2, 1996 (DLD DIGEST) -- Recent news media accounts have focused on reports of thieves using high-tech, electronic code grabbing devices to steal cellular phone access codes and disarm remote control car lock systems. Now, thieves can use this same technology to copy garage door opener access codes and burglarize homes.

A new rolling code technology has been incorporated into some garage door opener brands to combat code grabbing theft. Homeowners need to be alert to the potential danger of this new, seemingly invisible method criminals are using to break into homes with these `electronic keys.`

Electronic code grabbing devices enable a criminal waiting near a home to copy the garage door opener's radio access code when the button on the remote controller is pressed. The recorded signal can be resent to open the garage door, giving the thief convenient access to belongings in thegarage and inside the home, if the garage is attached.

Many homeowners leave the door leading from the garage into their home unlocked, making entry by a criminal virtually hassle-free. Code grabbing devices are easy to obtain and can be purchased through mail order or built at home using components available from electronics stores.

New garage door openers using rolling code radio systems prevent this type of burglary by making a copied signal totally useless. Every time the remote controller button is pressed, the garage door opener's access code rolls or changes to one of 4.3 billion new codes. It's like changing the lock on the door each time it is opened or closed. The receiver in the opener's power unit knows
which new code to expect from the programmed remote controller and will never respond to the same code twice. The new rolling code system will only respond to remote controllers programmed to work with the receiver. This eliminates the risk that someone could purchase a store-bought remote controller to randomly operate your door.

'We feel very strongly about making consumers aware of the potential danger that this type of crime poses and want to let them know that it is relatively simple to protect themselves,` commented Lou Gillombardo, director of the Garage Door Safety Center. `And while there are ways homeowners can reduce their security risks, currently only garage door openers with rolling code technology can foil a code grabbing thief.`

There are two companies currently incorporating this new technology into all of their garage door opener systems. The Genie Company openers feature Intellicode(TM), and Overhead Door
Corporation calls their system CodeDodger(TM). Both are available through the companies' local authorized dealers and distributors. The Genie(R) brand openers are also sold through retail home centers and hardware stores.

While openers with rolling code technology offer the highest degree of security and the only defense against code grabbing, the Garage Door Safety Center advises that there are other security measures which should be observed by anyone with a garage door opener:

o While on vacation or away from home for extended periods of time, unplug the garage door opener unit or use a wall console security switch, which is an optional accessory to most openers.

o Just like you would change the locks on the door when moving into a new home, make sure you investigate the security of your garage door opener, as well. If there is an access code switch setting, it should be reset according to the manufacturers' instructions.

o Wireless keypads, which activate the garage door opener with a personal identification number (P.I.N.), are available for most garage door openers. This allows family members to open the door without the use of a key or remote. Never disclose your P.I.N. or leave it written down.

o Never leave your remote controller in the car or with a parking attendant. It should be treated like the key to your home.

o If you have an attached garage, make sure that the door which leads from the garage into the house is locked whenever you are away from home.

The Garage Door Safety Center is a public awareness program sponsored by The Genie Company and Overhead Door Corporation to provide consumer safety and security information on garage door openers.

For more information or a free brochure highlighting important security issues, contact the Garage Door Safety Center at 800/464-1881.

i have a Pro-90, and i was wondering how to find a trunked system. I scan between 850-870, hearing what sounds like police and other stuff, but how do i know if its trunked?!
For Example: lets say i find something on 853.500. how do i find out if its trunked, and if it is, how do i program it into the pro-90 to track all of the frequencies.
I love the scanner and understand what trunk-tracking is, just i dont really understand how to find the trunked systems and program them in to my scanner.

thanks in advance!!!!!
Steve.......... Evrclear84@aol.com

Harry, William;

This is a good site for the time being, but the FCC stopped updating it
as of 1 July, 1998. To get to the newer site you must dial into the FCC
database via an 800 or 888 number. I havn't figured out how to support
two dial in numbers with different settings on netscape.

Regards

Ed

Source record: 147645

Attention Uniden BearTracker BCT-7 owners: My BCT-7 was stolen and I have the remaining original accessories that I no longer will need (I�m getting a handheld scanner instead of replacing the BCT-7): (1) mounting kit, (1) mobile antenna, (1) telescopic antenna, (1) AC adapter, (1) Operating Guide.

In addition, I have aftermarket accessories that I used in my car including: (1) All Band Scanner/AM-FM Balanced Antennna Splitter which adds scanner reception capability to standard AM/FM car antennas. You simply unplug your car antenna from the back of your stereo and plug it back into the splitter. Two leads are provided from the other end of the splitter. One lead goes back into your stereo, the other goes to your scanner. Because the splitter is �balanced,� neither radio will suck signal from the other. The BCT-7 has a BNC connector and thus needs a separate adapter (which I also have and is included). Price paid for the splitter and adapter was $25.00.

All of this (including splitter and adapter) is yours for just $15.00 plus shipping to wherever you are. E-mail me if you are interested.

2535. 900 MHZ HANDHELD SCANNER WANTED.

Ryan, will you stop being a know it all and stop posting inaccurate
information all over these newsgroups. There is a cellular mod for the
Pro-64.

Ryan Faricy KC0DSZ wrote in message <35D76330.37360F51@nospam.atandt.net>...

For all of you who would like to THANK Bill's provider for acting responsibily & removing him from accessing the interent (thru the RR.COM system) please write to abuse@san.rr.com & abuse@rr.com. Just e-mail a quick note thanking them for acting on Bill is all that is necessary.

Thanks !

Bill was not kicked off of this NG. He was kicked off of his ISP
due to usenet abuse! I am sure that Monday Bill will be back on here
with a new account! Hopefully Bill will learn a lesson about the errors
of his ways & change his style to stop the harassment of this
NG & it's members! Otherwise, this cycle is likely to keep repeating
itself.

Remember, Bill was recently kicked off of the scan-L mail list due to
abuse
also!

I have only been on the internet for 2 years & a few weeks. I first
met Bill about 2.5 years ago!

> Even though it's cost your lots of money, several ISP
> accounts and your own personal reputation, you persevered.

It has not cost me any money, I have never lost ANY ISP account,
& my reputation (due to standing up to the BULLY LIKE TACTICS of
Cheek & the Cheek-a-likes) has improved by leaps & bounds!

> Bill Cheek
> has finally lost his ISP account and is, for the moment at least, "off
> the air".
>
> How does that make you feel? Are you happy with yourself? I certainly
> hope so.

I can NOT take ANY credit!!! Bill's own actions got him where he is
now at. Edwin Kruse, administrator of SAN.RR.COM gave Bill
SEVERAL warnings over a period of several weeks yet Bill ignored them
ALL!

Bill's consequence is something YOU can learn from, & hopefully
Bill will also take a lesson from this situation he caused!

If a man abuses or rapes a woman, who do you blame? Certainly not
the woman!! Certainly not the witnesses who reported the crime!! You
blame the perpretrator! Bill is the perpetrator in this situation,
so don't blame me or others for reporting his unrightful actions!

Are you sure you want to buy an R-10? I bought one and found that it is not all that it is cracked up to be. Granted the coverage is good and it receives many different modes but I found that my Grundig YB-400 did a better job on 30Mhz and below than the R-10! The noise blanker actually injected NOISE into the received signal audio! The scan speed is also so slow you could go to the kitchen and make a sandwich and come back and it has not even completed scanning 100 channels! I promptly returned it for a refund. Save you money and rethink the purchase. Just my opinion. 73

You OBVIOUSLY don't read the posts on this NG very throughly!

Sunday afternoon or evening I stated that Cheek probably will be back
here with a different ISP on Monday. Further, I suspect he will be here
with
a CTS.COM dial up account (another common ISP in San Diego Cheek
formerly
used).

> he MAY end up with his RR account back, and YOU will then be fighting to
> keep YOUR account,

Yea, Bud, I am sure you would like that. We'll see how things actually
turn out. I believe you will be wrong on both your statements above.
Just
so you know, shortly I will be moving from MCI to AT&T or Concentric for
my ISP service.

Hi there,

I'm wondering if the 895 has the "Data Skip" feature which is in the
900, and, if this feature works well in the 900.

I wonder why Uniden hasn't made a "next higher" model of the 895 with
the frequency coverage of the 900?

Because the PRO-90 (and many newer scanners) virtually cannot receive images. It has triple conversion, which *almost* completely eliminates images.

Intermod is different- if you go downtown or to a place with a lot of metal, you'll find that you'll receive cellular conversations, but those aren't images. Just a front-end overload.

Ryan,

There recently was published a means to in fact receive cellular on a
PRO-64. It only enables CELL "A" (non-wireless) output frequencies,
requires toggling the red and black pins on CN101, and interpolating the
frequencies when scanning 29-54MHz using the formula cell= 772.5 + (2x
[display freq]).
Use Alta Vista and look for cdeviney@ipa.net (Cathy De Viney) post of
22 July '98 to rec.radio.scanner titled "Cellular Mod for PRO-64!"

As long as the problems end then everything is fine. Bill has
an opportunity to learn from all that has happened here within
the last 30 days he has been booted from the Scan-L mailing list &
booted from his ISP, both for problems of abuse committed by HIM!

Bill has no one but himself to blame for the responsibility of
his actions.

He has the choice of wether or not he uses this opportunity to
learn & change or not.

This could VERY easily return instantly to the productive
& comfortable place for mature discussions related to the hobby
of scanning. But that will require Cheek & his many "Cheek-a-likes"
(including you) to begin acting maturely & responsibly, thus
ending their usual activities on this NG.

Oatmeal Boy, Radio Shack scanners DO cover 900 MHz. You just have to pick the right model. Most of them cover to 956, but a few go up to 960.

You could also try a brand other than Uniden/GRE (brands Radio Shack uses). Like Alinco, Icom, Sony, etc.

John: Shut up. I was only posting what I've seen MANY times, and that is that there are NO cellular mods for the PRO-64.

Next time, be a little CONSTRUCTIVE in your criticism. You could say politely, "Actually, there is a cellular mod for the PRO-64", instead of "Stop being a know-it-all.".

BTW: That cellular mod does NOT let you enter in ANY cellular frequencies. You must search in the VHF band.

As John Habbinga IMPOLITELY pointed out, there is a mod for the PRO-64
which uses the VHF band that allows you to search cell frequencies.

Try a DejaNews power search for "pro-64 cellular mod".

Hi Emil,

I recently was sent a schematic of the PRO2004/5/6. Interestingly, the circuitry that checks for low-battery probably draws more current than the actual CPU of the unit! There's very little to go wrong in this circuit so I would suspect it's either a bad connection on the battery clip or the wire(s) leading into the radio.

FWIW, I see an interesting modification that would replace the battery with an electrolytic capacitor (1Farad, say from a VCR) and mean you would never have to worry about buying another 9V battery for the unit.

I've done similar modifications to ham rigs with great success.

Cheers!
Andy

There's an internal backup battery. Mine was dead too when I got it.
Being a frugal amateur, I replaced it with two hearing aid batteries.
These can be purchased from Radio Shack. There's no tax on hearing aid
batteries. Get the big ones.

As an aside, you can use them instead of the 7V battery in Realistic and
other CB preamplified microphones. Stack 'em up and put heat shrink (or
electrical tape) around them to form the same shape and size of the 7V
cell. Actually, if you are carefull youcan just shove them in and go
with it!

FWIW, if you take apart one of those 7V cells you'll see it's just a
stack of the same button cell batteries.

My 760 has been going for more than three years with the hearing aid
batteries as has my Alpine CD player.

Cheers!
Andy

I think your friend was jivin' ya', Willis!! 8-D

Many of the new handheld Ham radios was good coverage (108-174, 220-300, 400-470, 800-950 etc.) and can transmit. Perhaps that is what your friend was referring too.

It should benoted that although many of the ham radios will transmit out of band, they usually do a piss-poor job of it. Typically, as you go up in frequency so does your deviation. I have a 2m radio that will transmit merrily up at 165MHz, but the deviation is about 12kHz! A little excessive I reckon. Also, the sensitivity of ham rigs is rather dubious out of band. This teamed with the shitty PLL designs is a guarantee that the vast majority of ham radios would fail FCC/DOC testing right out of the box - even inside of their "guaranteed spec'" range.

Some Hams reckon that their ham radios are just as good as commercial radios. I work in the commercial biz and can tell you they are dreaming - in colour!

Cheers!
Andy

Message-ID: <6r9li1$e0a@news.or.intel.com>
Source record: 147439

That reminds me of one of my first scanner experiences when I was about 14.

A friend that had a few scanners told me that he could jam the police frequency by entering the correct frequency into the scanners. He entered a frequency into one of the scanners and then tuned the other to the police frequency that he was "jamming".

Sure enough, there was a dead carrier on the police frequency! I was very impressed.

About a month later when I was in Scanners Unlimited (San Carlos, CA), I asked Glen if scanners could transmit jamming signals. He, of course, said no. I explained what my friend had done, and he laughed. He explained what my friend had done was to input a frequency that would tune the scanner's local oscillator to oscillate on the same frequency as the police band.

I said, "so they can transmit!". Again he laughed and said "well, yes, but the signal is so weak that it can barely be detected across the room, and any real transmitter would transmit right over it".

So, to answer your question, yes a scanner can transmit, but then, so can your computer, your clock/radio and maybe your vacuum cleaner - they all may generate stray RF signals that can be picked up by a nearby receiver.

Salve a tutti. Scusate la domanda balorda:
il mio problema e' questo: vorrei settare il mio modem in modo che
effettui una connessione ed inizi subito a ricevere saltando tutti i
controlli (carrier
detection , handshake..).
Per spiegarmi meglio: vorrei collegare il modem all'uscita audio di una
radio ricevente per acquisire i dati trasmessi da una una sonda meteo
che trasmette a 300,N,8,2 in FSK; non ho quindi le tensioni tipiche
delle linee telefoniche di linea, ma solo il segnale audio modulato.
Se qualcuno ha qualche idea in proposito.....

Well, the *CHEAPEST* way is to simply use your cordless phone and put it into "Test Mode," which will act as a reciever on all the cordless phone freqs (channels.) I can't find the exact document, but if someone out there has CompuServe, go to the HamNet forum and it's there.

Joe, Their system may be in fail safe mode if all the traffic is on the data channel. Do you hear a beep tone about every minute or so ? If so the trunking system is down and all traffic reverts to the data channel. Another way to confirm this is that you should hear a steady carrier on all other channels in the system and they to should emit the same beep tone every minute or so.

(Ericsson)
>>transmissions, there is a two-second hang with 4 beeps.
>>
>>I believe on a Motorola system, there is a half-second data burst at
the
>>beginning of transmissions.

Partially correct.

Motorola - one channel has constant datastream (600 bps, I believe)
that rotates among some of the system frequencies, usually changing
every 24 hours.

EDACS - one channel has a constant datastream but it sounds different
from Motorola. EDACS has a buzzsaw sound, while Motorola sounds more
like a diesel engine idling. Also, many systems are configured with
"anti-scanner" beeps and other sounds at the end of each transmission.

E.F. Johnson - there are at least two flavors of EFJ. One that
operates in my area has two distinctive features - one channel has a
constant SUBAUDIBLE datastream that never rotates to any other
channel. On a regular scanner, it sounds like a dead carrier. The
other notable feature is that each channel is keyed for a fraction of
a second once every five to 10 seconds, whether there is any traffic
on the system or not.

Message-ID: <35D7F31B.2E55AC43@email.sps.mot.com>
Source record: 147448

I am presently working on a 900 Mhz ham repeater system and here are the US cordless phone frequencies I try to stay away from. As you can see they are spaced at 128 KHz intervals, this is because they use wide band deviation.

A frequency plan for 40 channels equally-spaced at 128 kHz is shown here:

Channel 1 2 3.....38
39 40
Tx frequency (MHz) 902.144 902.272 902.400 .....906.880
907.008 907.136
Rx frequency (MHz) 922.880 923.008 923.136 .....927.616
927.744 927.872

just fill in between the ..... at 128 KHz intervals for the other channels you would want to stay away from.

I recently acquired a PalmPilot III (got it free). Initially, I didn't have much use for the little gizmo. But it dawned on me that it would make a neat device for storing frequencies, PL tones, licensee information and so on. A web search pulled up a demo version of a shareware database called Jfile. One of its nice features is that it allows you to convert .CSV (comma delimited) database files into .PRC (PalmPilot OS) files. From there it was an easy matter of grabbing a file of freqs off a CD-ROM, saving them in .CSV and transporting them into the PalmPilot. It makes a great add-on tool for people who use portable scanners. The shareware version only allows the use of a single database. For $20 you can get the registered version which permits saving up to 30 different databases.

Of course, at $350-plus, I wouldn't recommend buying a Palm Pilot just for storing freqs. But if you already have oneï¿½ it's great.

You can do pretty much the same thing with a Windows CE device, using Pocket Excel. Not long ago, first generation CE handhelds were selling for as little as $100. You might still be able to pick one up for cheap.

I have built a Lindenblad antenna, however for a different application. I has very good low angle visibility and I experience very good overall performance. The ARRL Satellite Experimenters Handbook has a description of how to build it. Also, if you search the AMSAT web pages, there are some construction articles on them. Most of this information is on 2m and 70cm, however, you can easily scale this for your band.

Good Luck.

Speaking of the scan-l mailing list, I've tried twice to subscribe unsuccessfully, and each time I followed the instructions (maybe - or maybe not, maybe that's the whole problem :-)) and sent mail to the address indicated.

Is the scan-l mailing list alive and well? If so, what is the proper email address to send mail to about getting on the list? If the owner is reading this, could you please email me?

Thank you,

2619. [HELP] Sears5band scanner programing info

Newsgroup: rec.radio.scanner
Date: 1998-08-17 00:00:00 UTC
From: tham@fas.harvard.edu
Message-ID: <6r9thesqo1@news.fas.harvard.edu>

Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.swap

I pick up this radio scanner made by Sears and Roebuck Co., called Sears5band. It is a 16 channel user programmable using a plastic punch card. My question to you all is what is the programming logic for these punch cards. What holes do I punch to get what frequencies?

The card has 16 rows of punchable holes for 16 channels, and each row has 16 holes. The only channel currently working is ch16 which has WX 3 162.475.

Any info is appreciated. If any one has extra puch cards I'll be interested in them also. If anyone has a Sams Photofacts SD-14, which has this radio informations, please let me know.

Thanks in advance.

You guys have been complaining constantly about Cheek. Well, you got what you wanted: He's gone, at least for now. All along you have asserted that you would start posting on-topic when Cheek was no longer an issue. Well, where's the on-topic, relevant posts? Now is the time to put up or shut up, eh?

If you are looking for a frequency inversion descrambler, this is the best I have found. It comes completely assembled in it's own case with power supply and built in speaker. All you do is plug it into your radios ext speaker jack.

I agree - why don't you (MAlexder) take your own?

If you don't like me and don't want me to be around, why don't you do all of us a favor and get it over with? Then, it's a win-win situation. You don't have to be around me, and we don't have to be around you.

This was brought up recently. Many of the "scanner gurus" have said
that there aren't any known prosecutions for this "criminal act" but
the law does exist and I personally don't want to become famous
because of it! Chances of you actually getting caught are slim to none.
OBTW, the companies in other countries (esp. Canada & England)
put these disclaimers up as protection for themselves. They can't be
held liable for other countries laws. They aren't too worried if
you get busted for importing one to a country that it is considered
illegal. Best bet is buy a modifiable older one from www.ebay.com
Price is much cheaper and no fear of being caught.

2628. Re: OPINIONS Wanted For PRO-90 TRUNKTRACKER

Newsgroup: rec.radio.scanner
Date: 1998-08-17 00:00:00 UTC
From: UF1 <SPAM.LESS@NET.ME>
Message-ID: <35D888F9.B27E6955@NET.ME>
Source record: 147464

There's a good technical review of it located at
http://www.strongsignals.net/htm/pro-90.htm

For more info on "Trunking", visit:
http://www.trunktracker.com/

I bought one a few weeks ago and really like it...so much that
I bought 2 more for work (with employer's money). For
conveinience of purchase, I'd choose Radio Shack. For value,
I'd choose buying the Uniden BC235XLT (same radio, slightly
different skin) because it is the same price but includes an extra
battery (though a single one lasts for more than 8 continuous hrs!).

Even if you don't use the trunking feature, it is still an excellent
radio.

Hope that helps.

Robert

2629. cell images....on SC150 but not pro-90

Newsgroup: rec.radio.scanner
Date: 1998-08-17 00:00:00 UTC
From: evrclear84@aol.com
Message-ID: <1998081720014600.QAA15235@ladder01.news.aol.com>
Source record: 147465

here is my situation: i bought a pro-90, which works well but gets absolutely NO cell images. Then i tried out a SC-150B and found A LOT of cell images up in the 895-910 range..
why do you get them in the SC150, but not the other? i heard it had something to do with the triple conversion that the Pro-90 has. i would keep the SC-150, but it will only search the dumb preprogrammed search bands, and not something you put in.
are there any RS or uniden scanners (handheld) that pick up the heavy imaging like the SC150, but has the upper/lower limit, or manual search features. I'm looking to spend around $200 or less.
REALLY IMP0RTANT!
thanks in advance!

2633. dissapointed with uniden scanners....

Newsgroup: rec.radio.scanner
Date: 1998-08-17 00:00:00 UTC
From: evrclear84@aol.com
Message-ID: <1998081720080200.QAA16090@ladder01.news.aol.com>
Source record: 147469

i am dissapointed with the sportcat, bc80xlt, and all the other uniden scanners which dont have search capabilities. i absolutely HATE the 11 preprogrammed search bands that are on even the $200 scanners. Even with the cheapest scanners sold at RS, you can put in atleast a lower limit, and go to a frequency without programming it in. Why do they do this?!! i love the Sportcat150, but i am not gonna keep it just because it is very annoying not being able to seach within limits you make. you'd expect an expensive scanner to have this!
please respond with any comments or suggestions.

I am considering buying a mtv-7100 scanner through a canadian distributor. Can anyone tell me how this model holds up to say the AOR800, or even the mtv-9000?

Money is a factor for sure, but so is performance. Is the mtv-7100 good enough, or should I hold for a aor8000 or mtv-9000?

BTW, how easy is it getting these scanners delivered by ups to the states, seeing they come with celular freqs?

Thanks.
Jim

Any old programmable scanner will do.
This is a common band. Since most people want something capable
of 800 MHz, these older ones (usually limited to 512MHz) are
very cheap. Anywhere from $10-$50. Check out www.ebay.com
Search "scanner". Stay away from the even older "crystal" controlled
radios. You don't save enough money buying one of these to justify
the purchase. If you suddenly want a new frequency, you need another
crystal. With direct entry models, just type in the frequency (only
limited
by the radios specs). Don't be surprised if you find yourself wanting
another "better" scanner soon though! ;-)

I use this thing I got from Walmart for like $15 called a soundfeeder, basically it's a WFM transmitter. You just plug your audio source into it and you are on the air! I took the stock antenna off and put on a cordless base one, I can hear it clear for about a 1/4 mile radius around my house. With some cheapo fm headphones it works great and transmits in stereo!...Oh yeah..it works awesome in the car. I stick it and my 235xlt under the seat!

I've seen posts about people wanting or getting scanners without the 800 block. On a web-site that sells these, it says that it is "a criminal act and may be prosecuted". Is this just a ploy to scare people, or is it a real risk? Anyone know any stories that confirm or refute this statement? What happens to the people who order and are caught? I'm thinking that if the company really cared, they wouldn't ship to the US. Anyone know? Plus, what is blocked in US scanners(besides the cellular)? Thanks!!!!

Jeff

>for me either, even with the right parts. Cathy's worked great!

It works when built with the right parts. It won't work if you build it
with the wrong parts, but that tends to happen with a lot of things.

A few details:

If the PRO-64 goes into "PC PGM" mode, but then does nothing when you
try to load frequencies (you never get the "connect" display), reset the
beastie. I've heard from several people who needed to do that, and I've
had to do it myself a couple of times. Have not heard from anybody who
had to do an "Initialize".

I've heard from a number of people who could not get the interface to work
with the resistor. I do not think anybody has needed the resistor.

You don't need the connection from the stereo plug tip to DB9 pin 2.
Maybe you do if you're using the resistor version of the cable, but IMHO
you don't want the resistor.

NO modern broad-range radio receiver has a single "screw" for sensitivity!
There are dozens of adjustments, and many of them interact with each
other.
And some only work on some frequency ranges and not others!
In general, any attempt to turn any "screws" will probably make things
WORSE!
Unless the unit was previously tampered with, the internal adjustments are
probably not causing the problem anyway.
As a starting point to try to solve the problem...check the antenna and
the antenna connector(the connector is more likely to be the problem).
Prehaps the soldered connections are bad, or the piece in the center of
the connector that "grabs" the pin in the plug is bent out so it does not
actually connect to the antenna...if so, a thin pointed object can be
used to bend the "fingers" back inward where they belong.

What are you trying to do with a 2030?
If's CMT you are after....
1.the unit gets very strong images right above the blocked ranges.
2.if the unit you have has a date code below 5/94 then there is a simple
"clip the wire" mod that works well...all of the common mod sites have the
data on this.

If all you want is the correct time, and not specifically the Heathkit clock, take a look at the "TAC" kit that TAPR sells. See

www.tapr.org

The TAC uses the GPS satellites as a source of timing information, and is *much* more accurate than the old Heath clock ever was - less than a microsecond error if you choose the right GPS unit, and a few microseconds error if you choose the cheapest GPS. You still may need a display of some sort, but a PC running "showtime" or "Tac32" will do that.

Yea, I figured you wouldn't. You don't want to have amateur
newsgroups see what you are doing as you can't fool them with your
false statements like you have been able to do to the
scanner listeners!

Tell the amateur newsgroups about your "Pottersville Amateur Radio
Group"
that you claim has 30 members, but you can only name 2 of them. Tell
them about how you are the president, secretary, VE testing chairman,
membership offficer, & what ever else you claimed! (You statement
about VE testing was really funny since you are only a TECHNICIAN!)
Tell them that even though the ARRL has never heard or or recognized
your club & that a search of YAHOO does not bring up anything about
it that you claim your club is still legit!

Then don't bring your personal frustrations onto this NG. If you can't handle yourself, go somewhere else and let your anger out. don't do it here, or it will be likely that people will do it back to you. If you think you can sit there and dish out crap and not expect to get any back, well... you got another thing coming.

The hair-palmed, butt-sniffer known as Mackey hypocritically spouted this retort to the observation that he never had any intention of posting on-topic:

>So when was the last time YOU posted on topic?

Well, Mackey, I have posted on-topic as recently as yesterday. In fact, I can easily say that I have posted exponetially many more times than you have.

So, Mackey how many times have YOU posted on topic among the 1000s of off-topic YOU have posted? Can you answer this question as readily as you ask it? I doubt it.

You have alleged on many occasions that your sole purpose here was to "clean up the newsgroup," and to keep Cheek in check. Well, he doesn't happen to be posting now but your here, still flaming, still causing trouble, still engaging in personal vendettas and all of your other distasteful antics.

As of this moment, I will send every single off-topic post your make to your ISP with a complaint. I will do this at least a dozen times a day for several months to come, if you keep to your usual pattern. Sooner or later, your ISP is going to get sick of me, and even more likely, sick of you.

The main option is the Opto interface. If he goes with that (not the Lite version, however) he can decode CTCSS and DTMF as well. As for what is a good program... Many recommend Probe. There's been a great deal of discussion this subject. Do a dejanews search.

Not exactly about scanners, but I thought the following news report would be interesting for its mention of intercepting encrypted transmissions...

WASHINGTON (Aug. 15) - White House technicians are masters of technology that would thwart any outsiders' efforts to tap into the video transmission of President Clinton's testimony to grand jurors, a communications specialist says.

The White House Communications Agency will videotape Clinton's testimony Monday afternoon and provide ''a one-way live feed'' to grand jurors a mile away at the U.S. Courthouse, presidential spokesman Mike McCurry said Friday.

Clinton will be questioned by prosecutors in the Map Room, part of the White House residence, McCurry said. He declined to provide further details about the closed-circuit TV transmission.

The grand jury is hearing testimony in Independent Counsel Kenneth Starr's investigation of Clinton's contacts with Monica Lewinsky. The secrecy of grand jury proceedings is protected by law, although Clinton and other witnesses can talk about their own testimony if they choose.

As the day approached, Washington was filled with speculation about the prosecutors' questions and Clinton's answers. But it is unlikely anyone will find out through eavesdropping on the video feed, said Dennis Dunbar, a telecommunications specialist with 15 years' experience setting up closed-circuit TV conferences.

''It will be absolutely secure,'' Dunbar predicted.

The most likely scenario is the use of digital transmission cable to link the White House and the courthouse to the existing fiber optic network beneath Washington's streets. There are thousands of underground cables, and inside each of those, thousands of lines only as thick as a human hair.

''If someone climbed in a manhole to try to find the wire, they would have literally thousands and thousands to pick from,'' Dunbar said.

The feed will likely go over a dedicated line carrying nothing but Clinton's transmission, lowering the chances of any kind of interception, he said.

The White House Communications Agency, created in 1942 as part of the Army Signal Corps, will almost certainly use the most sophisticated encryption technology available to scramble both the image and the sound, Dunbar said.

''WHCA is the cream of the crop - the best communications specialists the military has,'' he said.

That is one of the most funny things I have ever heard, impossible?? Most of the signals you will find out there might be encrypted, but chances are that a Pentium or two will be all that is required to decrypt, probably not real time, but thinking for a _moment_ that is impossible is irresponsible, nothing is impossible. CALIFORNIA CODES
PENAL CODE SECTION 466.9.

Code Grabbing Device

466.9. (a) Every person who possesses a code grabbing device, with
the intent to use it in the commission of an unlawful act, is guilty
of a misdemeanor.
(b) Every person who uses a code grabbing device to disarm the
security alarm system of a motor vehicle, with the intent to use the
device in the commission of an unlawful act, is guilty of a
misdemeanor.
(c) As used in this section, "code grabbing device" means a device
that can receive and record the coded signal sent by the transmitter
of a motor vehicle security alarm system and can play back the
signal to disarm that system.

>> : Is it more than a bunch of old geeks who haven't heard of cell phones?

All radio services have their advantages and disadvantages. If you
want the freedom to talk about whatever you want and use whatever
language you want without having to worry about getting your tires
slashed just because somebody listening doesn't like your opinion,
then a good ol' cell phone is the ONLY way to go! You can still
entertain loyal listeners as I do all the time :-), but because your
address isn't all over QRZ, Buckmaster, and all the other callsign
databases out there, people can't track you down easily. I realize you
can get a P.O. box, but your signal is still easy to DF on ham. I've
been licensed for 2 years and now I rarely use ham, except while
mobile. I would also use it in an emergency IF the cell phone system
was down. I would also use it for low-power simplex with better range
than FRS (sometimes using split frequencies for security) if I needed
the extra range (very rare).

Gizmow@erols.com wrote:
> ... that It is illegal to buy a scanner that will monitor cell phones.
> ... What if you buy a older model ...

In the U.S. it has been illegal since April 1993 to manufacture or import a cellular capable scanner. There is no restriction on owning or selling a pre-ban scanner.

> Can you modify the new ones to un block those freq. Is this legal

The FCC has recently interpreted the law to extend the definition of "manufacture" to include commercial modification i.e. done in volume for compensation. Individual mods to one's own scanner have not (yet) attracted the commissions attention.

> What about cordless 900Mhz phones? Is that legal?
> Do the new 800Mhz scanner have those freq. blocked out as well

Monitoring cellular was made illegal by the ECPA of 1986. Cordless was added to that ban in 1994 by the Digital Telephony Act. There is no ban on scanners that receive the 49 or 900 MHz cordless ranges. These frequencies are intermixed with other, legally-listenable transmissions (and cordless manufacturers don't have a need to finance a multi-million lobbying effort to deflect subscriber complaints).

> What are the freq. of coreless phones.

Look back even a little bit in this newsgroup. In the last 6 days there have been two series of postings with the frequencies (albeit many of them carried errors). Likewise, a detailed essay on cellular & cordless laws was posted only twelve days ago.

2696. Here's how to do the FT-50 software mods...

Keep in mind that this is a beta posting and the faq will be re-written and cleaned up over the next couple of months. This is just a first draft. Any suggestions, please feel free to e-mail me, my address, and info on how to un-anti spam it, is on my sig below.

-----begin file-----

FT-50 software mod faq v.01

This faq was written based on an article by another who's name was lost. Credit for the idea goes to that person, but some credit goes to me for re-writing it into a simpler and easier to understand form for those unfamiliar with hex editors.
The following information is based upon exploration and tests performed with an FT-50 with 6H07 as the first four serial numbers, and ADMS software v1.04 for Windows.
Legal stuff: Transmitting outside of legally allowed bands is quite illegal, so just don't do it. This is even true if you have a liscense to operate on other bands and have other business radios that do that. The FT-50 isn't type accepted to x-mit on any other band other than amateur freqs and for MARS / CAP use.
By performing any of the following mods, you take full responcibility. If you get caught doing anything illegal or if you screw up your radio, don't come whining to me, it's your fault, not mine.

Now, the faq:

q.) What is the software modification and how does it differ from the hardware modification?

a.) The FT-50 is rather unique in the fact that unlike other radios where a series of diodes or resistors that connect to the CPU from outside of it and specify what frequencies the radio can operate on, the FT-50 stores this information as a series of two bytes of information in it's RAM in the CPU. No hardware is used at all to specify or control these bytes. The hardware mod above does nothing more than let you change these bytes with a menu system built into the radio. Removing the chip resistor in and of itself dosen't free anything up other than letting the user access this menu system.
Removing the blob of solder governing the MARS/CAP access is another thing. This is the only mod that is hardware affected. But it is possible for one to not FrEEband the radio but instead MARS/CAP the radio by the same software mod. But this dosen't change the country settings or let one switch to FrEE mode like the true software mod does.

For the software mod all one needs for tools is a Hex editor for
their computer, a personal computer, and the ADMS-1x interface kit.

q.) Hex editor, What's that?

a.) A hex editor is a program to edit a computer file at it's most
basic level, the individual hexadecimals.
Hexadecimals work like this: thay're just like the standard numeric
system, but they go a little farther. Like 0,1,2,3,4,5,6,7,8,9 then
repeating is what we're all familiar with, but hex numbers work like that
but 0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F then repeating. So 45 would be 2D in hex
or 2Dh. 157 would be 9Dh, 07 would be 07h, etc. The calculator that comes
with Windows does hex conversions so you can play around with them.

q.) How do I use a hex editor?

a.) Here's a crach cource for hex editors, you can read the readme and
help files that come with the editor to learn how to use it in more detail.
When you open a file, you'll see the following:

00000000 47 49 46 38 39 61 01 00 01 00 80 00 00 FF FF FF
GIF89aï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
00000010 00 00 00 21 F9 04 01 00 00 00 00 2C 00 00 00 00
ï¿½ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½,ï¿½ï¿½ï¿½ï¿½ï¿½
00000020 01 00 01 00 00 02 02 44 01 00 3B ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½Dï¿½ï¿½;

This is a 1x1 transparent GIF that I use on my web page, But you get
the idea.
The pairs of hex numbers represent a single byte.
On the left side is where you are, in the middle is the acual hex
itself, and on the right is a plain text translation of what the hex
represents.
You change the values by clicking on an individual hex character
with your mouse. It'll then start blinking. Now let's say you want to change
FE to 09, you wouldn't type in 9, you'd press 0 then 9 on teh keyboard. The
cursor will then go to the next hex to edit. You can use the arrow keys to
move the cursor up and down, back and forth. The only keys that'll work are
the 0-9,a,b,c,d,e,f, arrow keys and the tab key when within the hex side.
The a,b,c,d,e, and f are case insensitive, so you can have the caps lock set
to whatever you fancy.
By clicking on the plain text side or pressing the tab key you can
switch to full text mode. Here, whatever key you press on the keyboard,
except for the tab key, will generate ASCII text on the text side and hex
values for that text on the hex side.
So if you type in "Text Goes Here" you'll get:

00000000 54 65 78 74 20 47 6F 65 73 20 48 65 72 65 Text Goes Here

With hex editors when you type in text or change characters, the
rest won't move around like with Notepad or other text editors.
And finally, when you chenge any of the hex or text, what has
changed will change color from black to red. The acual colors may vary from
hex editor to hex editor.

To summorize, to change a 04h to a 6Eh, open the file into your hex editor. Scroll the side bar to where the byte is that you're interested in. Click on it with your mouse, then press "6" followed by "e". The hex char will change color and your cursor will move to the next char. Then select the "File" then "Save" from the menu. The color of the byte will return to what all of the other chars are, but the cursor will remain where it was left. You can now close the hex editor with your altered file now saved.

q.) Where can I get a hex editor from?

a.) They're all over the place. Search for one in Yahoo or Alta Vista. My hex editor of choice for the beginner and for occassional use is HEdit by Yuri Software. You can use the FTP search engine http://ftpsearch.ntnu.no/ and search for "hedit" to locate a copy of HEDit on a FTP server the 'net somewhere.

q.) Now that I know what a hex editor is and roughly how to use it, how do I use it and my ADMS interface kit to modify my FT-50?

a.) Ok, now onto the fun stuff, how to do the software mod itself. The ADMS computer interface let's one dump or download all of the information stored in the FT-50's ram. This is then manipulated and changed by the incuded software, and then uploaded back to the FT-50. When the memories are in the radio itself, there's no way to edit the individual bytes, but after downloading to the PC, it's quite vulnerable and can be easily edited and changed to whatever the user fancies then re-uploaded back to the radio. The only secret is knowing what bytes need be altered, and here thay are:

First, download your memory from the radio and save it as a file. This following information is based on tests done with ADMS software v1.04. If the files your ADMS software saves files that are 9184 bytes in size and have the extentions .TPL or .RDF then you can most likely alter the country byte. If you find that you can't alter this byte because Yaesu has had RT Systems change their ADMS software to not let users do this anymore, then you can get an older copy of the ADMS software from a friend or someone else who has it.
The two bytes that govern the country code are located at 5E3h and CE7h. Your hex editor should show you what byte you're on at the bottom of the screen.

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ this one (5E3h)

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ and this one (CE7h)

In the example, some of the other bytes will vary from radio to radio, so don't be suprised if yours looks a little diffrent. But the country byte should be at 01 if your radio was sold in America.
The first byte is more of a security or protection byte that's supposed to keep you from doing what you're about to do. It must be set to

what your radio currently is at, or left alone, depending on the situation.
The second is what you change to get your radio to what country you
want it set to.

So, in order to freeband the radio, first download what's currently
in the radio and save it as a file. Now open it into a hex editor and find
the bytes of interest to you. You wouldn't change the first byte, but you'd
leave it alone. All you'd change is the second byte. You'd set that byte to
06 in order to freeband it:

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'd now save the file, then switch to the ADMS program and re-open
your file. Now upload it to the radio. If you get a CERR message on the
display, something went wrong either with the upload / download process, or
when you altered the byte. But 99.99% of the time, things will go without a
hitch.
Now confirm that you're radio has been freebanded by going into a
VFO and extering 50.00mhz. If it accepts this, then try and x-mit on this
freq. The radio should not x-mit, but make a pop sound for an instant then
just sit there not x-mitting. But you'll notice no "ERROR" being displayed
on the screen. If this happens, the radio has now been freebanded.
If all you're doing is freebanding is a friend's radio, you'd stop
here, but there's a problem if you have lots of other FT-50 memory files
stored that you use. If you try and upload them, you'll get an instant CERR
message if you try and do so.
So, you'll need to alter all of your other data files to match the
new country code setting.
Go in with your hex editor and change both the security byte and the
current country byte so that they both match the radio's current settings.
Like this:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'll need to do this with all of your files, but then they can all
be used again.
If you want to reverse the freeband mod and go back to the country
code you had before, simply follow the above instructions, but use 06 as the
country you had before, and 01 (or whatever other country you want to use)
as the country you're going to set it to. Like:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

q.) But from the old hardware mod I remember things like "BAND_B2a".
What you just said only changes "BAND_x2a", so how do I change the sub part
after the letter?

a.) That "BAND_B2a" stuff is part of the radio's internal menu system to
change the country code settings. The letter is the country, while the
number and letter after it specify details about the country. Like 1 is
without extended recieve where you can only recieve on the freqs you can
x-mit on and 3 is standard operation but with the ability to recieve almost
anywhere, like it normally is. The 2a and 2b settings involve the MARS/CAP
mod, and I have yet to explore those.

q.) So, how do I change the sub country setting with the software mod at
the same time?

a.) I haven't had much success doing this, but I soon hope to have this
cracked. From what I've been able to figure out, two bytes govern the sub
country setting. These are:

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ ^
| CE9h
CE8h

CE8h is the main one, it's at 00h for "1", 01h for "2a", 02h for
"2b", and 03h for "3".
CE9h controls the extended recieve. It's set to 00h for no extended
recieve and 01h for extended recieve.
If I change just CE8h then the ADMS software corrects the file and
set's it back to 03h if CE9h is 01h, and back to 00h if CE9h is 00h. It also
does this if I set it to 01h and 02h. :(Some byte needs to be set to
specify a MARS/CAP mod.
The good thing about this is that there's no security byte, you can
change these bytes to your heart's content in whatever file you want.
I'll soon have this cracked, but keep in mind that this is just a
beta FAQ.

q.) Well, have you at least figured out what all of the country codes
do?

a.) Most of them. Figuring out what the frequency bands took long enough,
I admidt to getting lazy and not figuring out what the default repeater
splits are, and what the other country codes do to other default settings.
Hey, it took me long enough to figure out what I did figure out.
Here's the byte settings as they relate to the old hardware mod:

```
| 00 01 02 03 | <- sub-country byte (CE8h)
---+---------------------+
00 | F1 F2a F2b F3 |
01 | A1 A2a A2b A3 |
02 | B1 B2a B2b B3 |
03 | C1 C2a C2b C3 |
04 | D1 D2a D2b D3 |
05 | H1 H2a H2b H3 |
06 | FrEE FrEE FrEE FrEE |
---+---------------------+
^- main country byte (5E3h & CE7h)
```

Here's what country each country byte goes to:

```
---+------------+
00 | ? |
01 | America |
02 | ? |
03 | ? |
04 | ? |
05 | Canada? |
06 | Freeband |
---+------------+
```

Hopefully someone can fill me in with what country codes go what
countries that I've lsited as "?".

q.) What bands does each country code let you operate on?

a.) Glad you asked, I spend three hours making this table:

```
country sub-byte (CE8h)
| 00 | 01 | 02 | 03 |
---+----------------+----------------+----------------+----------------+
| tx | tx | tx | tx |

```

I hope to fill in the blanks with the soon with the MARS/CAP mod information.

In the mean time, I hope you enjoy this beta faq. If you hate my spelling errors, and bad grammour, then buy me Office '98 or something so I can use the spell checker. :)
If you find any inaccuracies with the information, e-mail me and I'll correct the faq. Or even if you find out any information not listed here that's revelant to what this faq's purpose is. The whole ham community will be grateful for your contribution.

I have a Pro-26 scanner for sale. The scanner has the cellular "virtual downconversion" completed.

I will sell it for $165 plus shipping.

If interested, e-mail me at rolson@cpinternet.com

Thank you.

R. Olson

Includes box and all original documentation. Only used for 3 months.

Great bargain for only $100.00. Add $7.50 if you want it shipped.

Hurry, this one will go quick!

What in the hell are you talking about? It sounds like
you do not understand technology at all. Any scanner
hobbyist would know more. Go to a Radio Shack and
at least ask a few questions. They are better than nothing.

Maybe the hams and the scanner folks will be willing to
cross post to educate you.

Message-ID: <6rchud$o8g$1@news4.wt.net>
Source record: 147278

I haven't heard very many cell images on it. All of the newer RadioShack scanners w/ 800 MHz capability have triple conversion circuitry in them. This greatly reduces the cellular images that plague cheaper and older scanners.

By accident, I came across the following site:

http://www.enteract.com/~moressic/

It's got quite a few scanner mods, many that I've never heard of, like an SSB mod for the PRO2006 that Bill Cheek came up with. There are also mods for lots of radios, not just scanners.

something happens to the squelch control about every six months,have to take it back to Radio Shack pay about $50+ for shipping ect and it comes back okay for another 6 months,they won't gaurantee their service and since this cost about $350+ four years or so ago this is getting to be a very expensive toy to operate.Anybody have any ideas whats happening? Are any of the newer scanners more reliable than this thing? Help,thanks to anyone with any ideas.

Hey, I would like to hear from those who have experimented with computer controlled scanning. I am interested in this, and am trying to decide between two routes: The new BC895XLT with computer connection or the WinRadio device.

How do you use your computer in scanning? Which of the above routes do you recommend?

Thanks for the help and the information!

Yes, but Ham radios won't pass the minimum requirements for the FCC
without modifications. Ask a very large manufacturer who re-works ham
rigs for commercial use. I think we all know who it is.

Cheers!

From: Gizmow@erols.com
Message-ID: <35d9ec7d.107451877@news.erols.com>
Source record: 147290

I have never owned a scanner, but I have always found the news groups a great source of info and people willing to help. I hope this group is the same way.

I hope these questions are not the basic FAQs. I hit some web pages but could not find the answes.

I gather from what I have been reading that It is illegal to buy a scanner that will monitor cell phones.

What if you buy a older model without from the blocked Freq. are they still illegal or have they all ben recalled

If so what models are popular

Can you modify the new ones to un block those freq. Is this legal

If so can you find information on how to do this and where.

What about cordless 900Mhz phones? Is that legal?

Do the new 800Mhz scanner have those freq. blocked out as well

Will a regular 800Mhz scanner monitor them if you are close.

If not, what kind of scanner do you need to monitor cordless phones

What are the freq. of coreless phones.

Any recomendations on a good hand held sacnner of occasional use. ie sporting events, weather updates when the power is out and generly noseing aroud!

Please e-mail me direct with any suggestions

Mike

2722. Icom R-9000 heat problem

Newsgroup: rec.radio.scanner
Date: 1998-08-18 00:00:00 UTC
From: Manuel Maseda <mmaseda@gte.net>
Message-ID: <6rcth8eaa1@news-2.news.gte.net>
Source record: 147297

For those like me that don't like to see their R-9000 get hot enough to fry an egg, I have a simple solution. I made up a D.C. power cord and am now running mine using a small external 13.8 volt D.C. supply. The operators manual doesn't mention the pin-outs for the external DC-DC connector on the rear panel but I figured it out by looking at the service manual and called Icom to confirm. Simply remove the jumper plug from the connector and install 13.8 volts to pin 1 and ground to pin 4. Remember to disconnect the A.C. cord from the radio as it is no longer needed. You will be surprised just how much cooler the radio runs.

Good luck,

Manuel W4SSB

While listening to local law enforcement radio communications, I notice a large portion of their conversation is scrambled in some way (sounds like white noise). This is generally preceded with one of the officers stating something to the effect of, "Go coded...". Where might be a good place to find more information on the specifics of this, and is it possible to modify a scanner to unscramble these conversations? Any info will be appreciated...

The 2042 has been discontinued for quite some time. I believe someone
in the group said the new 99 catalog has no scanner capable of UHF-air
or commercial WFM. Looks like the Optocom and the 895XLT are the most
promising new units.

2736. HELP! New guy to scanning.

Newsgroup: rec.radio.scanner
Date: 1998-08-18 00:00:00 UTC
From: John Slade <hitman@tsoft.com>
Message-ID: <6rd363nnq1@news6.ispnews.com>
Source record: 147311

Hi all. I'm anxious to get into scanning. I have no idea what type of scnner to buy and how much to spend on it. I mainly want to listen to police, military, and airport. I'v heard something about trunked systems that only few radios can follow. What kind of radio works with trunked systems and I want to spend anywhere from $200-$300. I've also heard about a scanner card for my PC. Can someone please help me out? Thank you.

Hitman

2737. Where is FCC Freq Table?

Newsgroup: rec.radio.scanner
Date: 1998-08-18 00:00:00 UTC
From: malexder@aol.com
Message-ID: <1998081823434600.TAA29832@ladder03.news.aol.com>
Source record: 147312

Does anyone know where I can find a complete FCC freq allocation table that includes modes and steps for each allocation? For example, this type of thing: Broadcasting 450.05-450.925 FM at 24KHz steps.Thanks.

2738. BC3000XLT Battery needed.

Man. I dunno. I've had my Pro2032 running all the time and I haven't
experienced any problems with the squelch. The unit's been solid gold for
me.

Can you describe the problems you're having with the squelch control?

Hey Blake! Have y'all gotten my application for the Pottersville P_ARG? I'm
really excited about learning all about this fine organization!

You will probably have a difficult time finding a new one around that has 800 MHz reception without the triple conversion. Most manufactures have voluntarily agreed with the FCC to do this to prevent listening to the cellular phones. I am sure there are plenty of older scanners that are dual conversion. The Pro-51 is famous for being used to receive Newt Gingrich's conversations. BTW listening to cellular phones gets pretty old after a few days. I hope you get a life and find more entertaining uses for your scanner. ;-)

I must have a different list of frequencies, because on mine channel
25 ends on 49.....um I'll paste it in later, but anyways I don't want

to program in 50 banks so I just search 43Mhz to 50Mhz.
Here are my list of frequencies.
Freq. 10-25 [general cordless]

Channel	Base	Handset
1	43.720	48.760
2	43.740	48.840
3	43.820	48.860
4	43.840	48.920
5	43.920	49.000
6	43.960	49.080
7	44.120	49.100
8	44.160	49.160
9	44.180	49.200
10	44.200	49.240
11	44.320	49.280
12	44.360	49.360
13	44.400	49.400
14	44.460	49.480
15	44.480	49.500
16	46.610	49.670
17	46.630	49.845
18	46.670	49.860
19	46.710	49.770
20	46.730	49.875
21	46.770	49.830
22	46.830	49.890
23	46.870	49.930
24	46.930	49.990
25	46.970	49.970

Oh lokks like you just don't have the base & handsets, nevermind....

No John, the reason I refuse to continue it on another newsgroup, is
that you have already infected this newsgroup, I will not be party
to your infecting other newsgroups.

>Tell the amateur newsgroups about your "Pottersville Amateur Radio
>Group"
>that you claim has 30 members, but you can only name 2 of them. Tell

John, no one but you has asked for a membership list, and you
obviously only want it for two reasons, to spread more hate
and discontent, and to poll the members individually so that
you can try to reverse the decision to not allow you in the group.

>them about how you are the president, secretary, VE testing chairman,
>membership offficer, & what ever else you claimed! (You statement
>about VE testing was really funny since you are only a TECHNICIAN!)

Why is that? Where is the requirement that the person responsible for

the logistics be anything?

>Tell them that even though the ARRL has never heard or or recognized
>your club & that a search of YAHOO does not bring up anything about
>it that you claim your club is still legit!
>
This is idiotic! Since when has it been a requirement that a club
be recognized by the ARRL, or YAHOO????

Get a grip John! You cannot become a member.

Assumeing that you have tuned your scanner to a pager frequency, how have
you connected the scanner to your computer, or, have you connected your
scanner to your computer?

You probably need to tap into the discriminator of your scanner for it
to work.

Pager messages have a 99% bordom rating.

> >> Jim

I am curious as to how difficult it is to order a scanner from
Bandercom? Will it get through customs ok? I understand that while it
may cost a little more ordering from canada, at least they can ship by
ups, therefore avoiding the more snoopy post office! I'm wondering if
ordering from England, while lower in price, may be more risky? Please
excuse my ignorance, I would just hate to be out of the bucks if my
scanner was detaned at customs. I could save almost $100 by ordering
through England!(I am now also considering the AOR-8000 in place of the
MVT-7100) Is it worth the risk? Thank you in advance for your advice.
Jim

I can give you one darn good answer. Hams are cheap. Many of them
hang around commercial shops looking for equipment, advice, manuals,
and repair work, but aren't willing to pay commercial rates for it.
Some of them want free or heavily discounted access to commercial
sites for ham repeaters, which are often poorly set up and maintained,
and cause interference to or get interference from commercial
stations. When the latter happens, the hams bitch about that, too.

I know this, because I've seen it all. And no, I'm not in Commercial
radio, but I have friends who are.

Not all hams are like this, but enough are to make give the rest of us
a bad reputation.

Hi Guy ,

POC32 instructions ..begs you to use the discriminator output
and NOT use the audio output other prople say will work. Most
of the user instructions are devoted to explaining why the
program is NOT intended to use the regular sound output ....
Using the disc output gets 100% results on all types (speeds)
of pocsag pages with no effort or concern for levels ..etc. (within
reason) ..... Take the advice of the software author and not
misguided tinker-ings ...use it the RIGHT way for best results.
(ah ..the ignorance of youth ...) ....
E-mail me for a copy of the english language instructions (for the
shareware copy , which are about the same as for the pay copy) .
if you can't find them elsewhere ....

>Bandercom?

It's easy. I just got my Yupi in eight days.

> Will it get through customs ok?

That is always a risk. Bandercom is one of the few companies that guarantees delivery, even if the scanner is nabbed by Customs.

> I understand that while it >may cost a little more ordering from canada, at least they can ship by >ups, therefore avoiding the more snoopy post office!

Not true at all. Avoid UPS and FedEX like the plague. A few years back, I had to pay customs fees on scanner sent via UPS but never on at least five scanners sent by registered airmail.

I'm wondering if
>ordering from England, while lower in price, may be more risky?

I don't think so. I ordered an interface from Durham in Canada some time ago. They stiffed me on the mailing cost and sent the dang thing by slow boat--it took a couple of weeks to get to Massachusetts!

Please
>excuse my ignorance, I would just hate to be out of the bucks if my

I agree with Fritz..the RS amplified will make a handheld sound GREAT...I had the RS-90 and it was wonderful...I used the smaller speaker on the RS and it helped a little, I have a Relm HS200 which has better audio than the RS-90. The small speakers only advantage here is that I can direct the sound at me. (I also have other radio gear compteteing for attention.) The hs-200 could probably drive the larger unpowered RS speaker with no problem. I have yet to try it, but will soon.

My only problem when I use the RS amplified speaker is that I get tremendous feed back when I key my radio. It's not the speakers fault, since I get feed back through my stereo as well.

Peace

Roy

Before you start making foolish statements like these, consider the fact that not every city has nothing but civilized, considerate people on the ham bands. Here in Sacramento. CA there are hams who act worse than some CB'ers. The tire slashings have happened to SEVERAL hams in this area. There was an ongoing dispute between some hams, and it came to a head with the tire slashings. When I got my ham ticket I had NO idea that any of this kind of crap went on in the ham world. I also didn't know that my address would be readily available to anyone with an Internet connection who knows how to use a callsign server. Like most self-righteous hams, you failed to read my post completely. I stated that you have the freedom to talk about WHATEVER YOU WANT on a phone. That means no restrictions on language, business communications, etc. Ham autopatches have 3-minute time-out timers and NO privacy. Cell phones have no limit, full-duplex communication, no outdoor antenna required, and slightly better privacy. I got tired of all the politics in ham radio here too. At least on a cell phone you don't have too worry about being jammed out by the scumbags who don't give a rat's ass about Part 97 and good old common courtesy.
By the way, I pay $19.95 a month for unlimited night and weekend calling and 20 free peak minutes a month. Since I talk during off-peak hours, my bill never goes up. You might want to get with the times and realize that some things in life are worth paying for.

Remove "nospamno" to email.

I believe that I've seen others ask this, and if I'm not mistaken, I
think alarms operate in the gigahertz range -- either there or 900.

I would have to say, it probably wouldn't cause too much interference at
all. (Unless you're listening to very high frequencies, 950+.)

When your "HAM RADIO" is certified to operate on the commercial bands then it is legal to do so. Most of the Motorola and GE equipment on the market now will cover both the amateur abnd and commercial band without tweeking the radio. Just program in the frequencies and off you go.

I agree. One of my first non-crystal scanners was the BC50XL and it had no search capability. It drove me crazy. I personally have never liked RS scanners (except for the 2006), because I have had bad experiences with their quality.

Now that you know what you want, just don't buy a scanner without search capability. The BC220, 235, & 3000 are excellent HH scanners. The 9000, and 895 are also great base scanners. Stay away from the mass-marketed, low-end, and specialty units if you are looking for a general purpose do-it-all scanner. The Sportcat was a marketing gimmick.

From: thelanlord@my-dejanews.com
Message-ID: <6rb4qjed1@nnrp1.dejanews.com>
Source record: 147408

I got a Radio Shack PRO-23 and i got a problem with it. First of all, it powers on, and scans the bank channels but i can't pick up anything. I've also done a scan of freq ranges and don't get anything either. I've checked the antenna and tried another, as well as cracking it open and resoldering the connections, still nothing.

Does anyone have an idea of what could be causing this and how i go about fixing it?

Any help at all would be greatly appreciated, Thanks

From: Darrell <gibronni@mark.com>
Message-ID: <01bdca3b$8f2e4f60$4f6aa1cf@markspac>
Source record: 147409

An interesting post!

I'm wondering if one of those "detector vans" that are used in Europe to detect unlicensed reception of tv signals, could be used to intercept the transmission. I can only assume that you would have to be close to one of the two monitors being used, effectively eliminating the White House end. My recollection of " Tempest" hazards is rather hazy, but will a CCTV work in this case, assuming it does not have a tuner?

Of course, given the porous nature of the testimony so far, it would probably be easier just to watch CNN, than attempt any complex technical methods. . .

Any comments?

Darrell

MAlexder <malexder@aol.com> wrote in article
<19980817124415 00.IAA27702@ladder01.news.aol.com>...
: Not exactly about scanners, but I thought the following news report would be
: interesting for its mention of intercepting encrypted transmissions...
:
: WASHINGTON (Aug. 15) - White House technicians are masters of technology that
: would thwart any outsiders' efforts to tap into the video transmission of
: President Clinton's testimony to grand jurors, a communications specialist
: says.
:
: The White House Communications Agency will videotape Clinton's testimony Monday
: afternoon and provide ''a one-way live feed'' to grand jurors a mile away at
: the U.S. Courthouse, presidential spokesman Mike McCurry said Friday.
:
: Clinton will be questioned by prosecutors in the Map Room, part of the White
: House residence, McCurry said. He declined to provide further details about the
: closed-circuit TV transmission.
:
: The grand jury is hearing testimony in Independent Counsel Kenneth Starr's
: investigation of Clinton's contacts with Monica Lewinsky. The secrecy of grand

: jury proceedings is protected by law, although Clinton and other
witnesses can
: talk about their own testimony if they choose.
:
: As the day approached, Washington was filled with speculation about the
: prosecutors' questions and Clinton's answers. But it is unlikely anyone
will
: find out through eavesdropping on the video feed, said Dennis Dunbar, a
: telecommunications specialist with 15 years' experience setting up
: closed-circuit TV conferences.
:
: ''It will be absolutely secure,'' Dunbar predicted.
:
: The most likely scenario is the use of digital transmission cable to link
the
: White House and the courthouse to the existing fiber optic network
beneath
: Washington's streets. There are thousands of underground cables, and
inside
: each of those, thousands of lines only as thick as a human hair.
:
: ''If someone climbed in a manhole to try to find the wire, they would
have
: literally thousands and thousands to pick from,'' Dunbar said.
:
: The feed will likely go over a dedicated line carrying nothing but
Clinton's
: transmission, lowering the chances of any kind of interception, he said.
:
: The White House Communications Agency, created in 1942 as part of the
Army
: Signal Corps, will almost certainly use the most sophisticated encryption
: technology available to scramble both the image and the sound, Dunbar
said.
:
: ''WHCA is the cream of the crop - the best communications specialists the
: military has,'' he said.
:

2805. Re: what is the best hand held scanner to buy?

Newsgroup: rec.radio.scanner
Date: 1998-08-18 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <35D8C3AE.968B8DF8@globe-net.net>
Source record: 147410

Radio Shack has been selling good scanners for years. Some
better than others. Many of the current line are made by Uniden.
Since you are into racing, Model 20-0513 (PRO-74) is what you
want. It allows you to store frequencies by car number. It is on sale
this month through the 29th for $169.99

It also has 100 memories (little on the low side) but has good
frequency coverage when away from the track:
29-54, 108-174, 406-512, 806-956(minus cellular) MHz

To see the specs for this radio, visit
http://www.strongsignals.net/htm/pro-74.htm

or visit the Radio Shack Website
http://www.radioshack.com/Support/
and enter the model # (PRO-74)
to read the owners manual.

I have a PRO-90, PRO-2042, PRO-2026 (all sold by Radio Shack).
If I was into racing, the PRO-70 model would be one worth a
serious look.

To get a list of the frequencies used in racing, visit:
http://www.netnerd-inc.com/joe/index3.html

Hope that helps,

Robert

No, apparently it means we'll have an
onslaught of pseudo self-important posts
like yours.
You need some major help if you've
missed all the scanner related posts
here. You can "get back" to that if you
want. A lot of us have never left it.

2809. Re: Trunk Tracking

Newsgroup: rec.radio.scanner
Date: 1998-08-18 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <35D8C72E.28E61267@globe-net.net>
Source record: 147414

There's some good info at http://www.trunktracker.com/

"Trunked systems, in layman's terms, frequency hop. A
conversation between two deputy fire chiefs may occur on one
frequency and then suddenly, during a pause in the transmission,
the conversation will jump to an entirely different radio frequency.
In the meantime, two sewer workers, in the same city or county
as the fire chiefs, may suddenly occupy the first frequency. Thus, it
becomes almost impossible to follow a complete train of thought."

The advantage to this trunking system is several agencies can
share a smaller set of frequencies. Rather than allocating a
much larger set (separate groups for fire, police, ambulance, etc.),
the "mother computer" manages the frequency hops. Police
only hear Police, Fire, only Fire, etc. The system also assigns
ID's for each radio. Each time the radio is keyed, the ID is displayed.

All this info shows up on a Trunktracker radio and the radio can
follow Motorola trunked systems. Without this new scanner, it
is a nightmare trying to follow the conversation. It would be like
trying to watch TV with someone continually changing the
channel each time someone stops talking. You quickly seach
the channels only to catch the tail end of the next sentence, then
the channel changes again! AHHH!

Robert

Actually I purchased this radio for the pure purpose of using it with a discriminator tap. Very easy to do, all I had to do is stick a wire in the middle jumper of the set of three jumpers just belong the CTCSS option board. Then is attached the Ground to part of the metal body. Some people have said difficulties might occur with using that output and not a on the chip, but I have had no difficulties. I have successfully managed to decode and track EDACS and Motorola trunked systems along with other forms of digital transmissions. Hope this helps!

The Picture:

```
[ - - - - - O O O O - - - ]
[ ]
[ (CTCSS BOARD) ]

If all you are interested in mainly is VHF low band you could purchase one of the commercial low band ducks cut to the frequencies you are interested in. Do a search on Larsen or another one that comes to mind is Tuff duck, can't remember the parent company, also you could purchase one of the replacement 6 meter ham ducks, try Amateur electronic supply in milwaukee. I have used the 6meter Azden handheld duck on my 895 xlt and it does work better than the telescoping whip for the upper end of VHF LB. Remember though your other frequencies, VHF hi UHF 800, will suffer.

Mike

Hi Dan,
Just to let you know that National Electronics has the BC235XLT
Trunktracker for 188.90 shipped to your door.By getting the uniden
radio,you get the extra set of batteries for free.I will be ordering
mine on monday along with the BC895 XLT which they have for 213
dollars shipped.
Hope that this helps and happy scanning.

For monitoring the local Motorola Type II SmartZone trunk, it can't be beat--unless you (AND whoever owns/operates the trunk!) are willing to get yourself a Motorola trunking radio. Reception within a Zone on the 235 is outstanding, although I had to pick up a third-party antenna since the Uniden one crapped out with the infamous centerpin breakaway. You'd never know you were on a trunk if you hadn't spent an hour or so programming the radio.

Some beefs I have:

1. The radio won't take into account all the modifiers that can be done to a channel. For example, Fire Dispatch channel C13 is 304 on my radio. They have C13 for the North half of the city and C14 (336) for the South. They have a foot pedal which activates the "multi-select" feature to let the dispatcher broadcast on C13 and C14 simultaneously. When the dispatcher does this, the talkgroup suddenly becomes either 311 or 343 (304 or 336, plus 7). The TrunkTracker doesn't handle this--I don't hear a dispatcher who's using multi-select unless I specifically listen to 311 and/or 343. Similarly, if someone on tac channel C1 (48) pushes the Emergency button, their traffic comes across on 50 (48+2).. and it's not heard on '48'. So if you program it using Scan Lists, you end up missing a bunch of stuff. (I'd use Search Mode, but there are upwards of 60 police digital/encrypted channels on this trunk, and you can only lock out 100 talkgroups total. There are also more than 50 Fire/EMS talkgroups too (the radio has 5 banks of 10 channels each in which to store talkgroups).
2. It can't follow the SmartZone system from zone to zone as I travel through the city. A true trunking radio (if I'd had $3000 to blow) would sense which Zone is the strongest and switch to it. The 235 doesn't. I programmed in all 5 Zones in the city and just have to start switching trunkbanks once the one I'm listening to starts to fall off.
3. Reception seems to be significantly less than a true trunking radio. Granted, like I say we're talking a $400 scanner versus a $3000 radio, but I at 50km away from the city can only get the Zones sporadically, and I know for a fact that fire crews have been out past my location by about another 25-35km and have been able to contact Dispatch using a *handheld* radio..
4. I'd prefer A) the delay to be selectable by each talkgroup instead of globally, and B) the delay to be shortened--currently, it's 5 seconds, and I think 1, 1.5, or 2 would be more than enough.

Other than that, the TT is a fantastic radio. I would recommend (and have done so) it to anyone wanting to scan a trunk system.

>
They are tones or codes that are sent with a radio transmission that tell radios that the message is for them. For example, our ambulance dispatch frequency is 154.515 MHz with a CTCSS tone of 131.8 Hz. With a traditional scanner, when I'm driving through town, and I pass by a group of fast food joints, I may hear "Welcome to Taco Bell, would you like to try some gorditas today?" NO, I only care to hear our dispatch! Also, I live on a hill and can pick up St. Helena Police and Suisun City Police both on 155.520. They use different CTCSS tones. By programming 127.3 Hz into my scanner, I just hear St. Helena Police. The DPL/DCS is a digital version. The only people I know that use it in my area are the school busses. Another nice feature with having them is that if all the frequencies you are scanning have them, you can turn the squelch all the way and won't give you a bunch of static and often, at least for me, picks up weaker signals. I bought the Bearcat BC 895 XLT scanner which has the CTCSS decoder (and CTCSS finder) but it doesn't have the DPL/DCS, which as I stated, isn't to bad since I could really care less what the school busses were talking about.

Have you told the scanner which channels you want recorded? You need to
press the "Aux" button for each channel you want recorded. When you
press it, the "Line" display will show for that channel. I guess it is
so you can listen to more, but only record select channels.

I have never harassed anyone on this NG. Infact YOU are one
of the biggest violators of the above.

> Bill lost his account because of YOUR lies and fake accounts that were
> continually sending complaints to RR.com.

WRONG! I have never lied to RR.COM or used fake accounts with RR.COM
as you state above. What proof do you have to support your
accusations? (You will have NONE because your accusations are
lies)

According to Edwin Kruse of San.rr.com, complaints about Bill Cheek
were received from MANY people.

> Your activities did NOT fool
> CTS.com, and that is why Bill still HAS an account there.

Yea, CTS.COM seems to be a haven for trouble makers as they ignore
their users that are trouble makers.

> But there are
> LOTS of people working behind the scenes to help get Bill back on RR.

Go for it, there are lots of people who worked behind the scenes
to get Bill OFF of RR.

> Don't
> bet on getting an AT&T account.

hahaha, I love a challenge!

I have started having a similar situation: My 2006 has had a memory
expansion (the Cheek 16 banks of 400 channels mod) and for the first year
or so I never had a problem. Now all of a sudden the battery seems to die
after a month or so, and without warning.

I have the battery from the radio that died today, and will voltage check
it at work tomorow...

I ordered a scanner from them once a few years ago. The scanner arrived and was not as specified in the ad in Pop Comm. The ad said it came with Ni Cads and a charger it did not. I called Ace they said to send it back for a refund. I did, they did not refund, after a month and several calls to them they kept saying it had been refunded. My credit card statement said otherwise. I finally had a threeway call between Ace, myself and my Credit Card Bank. The money was finally refunded. I never dealt with Ace again.

MAlexander;

The only complete reference that I know of is the FCC rule book. The official title is Code of Federal Regulations (CFR) Title 47, Telecommunications. The complete set is available from the Superintendant of Documents, Government Printing Office. It's five volums and the complete set goes for well over $150. It's probably available at a good reference library. Very hard to use because it's split up into various parts. The Broadcasters have their part, the marine users have their part, the aviation users have thier part, land mobile users their part. I have not seen a good listing of frequencies as to thier usage. The older Police Call books (Radio Shack) used to have a fair listing in the back but it's hopelessly out of date with the new rules in effect.

Regards

No ... MS is a disease that eats the myelin coating on nerves and disables most, if not all, of the body sooner or later. You can also go blind, deaf, lose all feeling, become a quadraplegic, and die.

And no, Multiple Sclerosis cannot be modified (and in reality, there is no cure).

I have a barely used pro-90 trunktracker that I need to sell.
It is only 2 months old and in very good condition (I even have the original box!). I would like to get $175 for it, plus shipping.
Please Email me at mailto:danielle@unidirect.com or mailto:danibel@earthlink.net if you are interested.
Thanks,
Danielle

2867. FS: MaxRad Mobile Scanner Antenna w/mount and cable

Newsgroup: rec.radio.scanner
Date: 1998-08-19 00:00:00 UTC
From: jimmi@mediaone.net
Message-ID: <6res8antb1@supernews.com>
Source record: 147184
Cross-posted to: alt.radio.scanner,ne.forsale,rec.radio.scanner,rec.radio.swap

MaxRad mobile scanner antenna with mount and 17' of cable. The mount requires a 3/8" hole be drilled at the spot where you choose to place the antenna. The antenna is all black and stands aprox. 18-20" tall. No marks or scratches on it. Asking $40

If interested contact via e-mail (jimmi@mediaone.net) or call 617-770-2452

Chris,
You're pretty much asking for two things which are mutually
exclusive. Like asking for a car that goes like a bat out of
hell but has the best fuel economy. There's always a trade-off.
Any number of gray levels in between but you have to decide
what the trade-off point is.
As the frequency goes lower, its wavelength gets longer.
To receive it efficiently, you would like to match the antenna
to this wavelength. So lower freqs needed longer antennas.
You might want to read my Handheld Antenna Review to
determine for yourself what level of performance you're
willing to sacrifice for a more compact package :

Thanks to the person who posted the list of SF Bay Area news frequencies (radio and television stations). I watched the Channel 5 news last nite and they had at least two "live" broadcasts which I did not hear (i.e., apparently they have some other frequencies not on the list). Does anyone else have a list of frequencies for Bay Area news organizations?

Thanks in advance,

Yes, you scanner is working as designed. The Auto-store on my BC2500 did not mute the audio, but my 3000, 9000, and 895 all mute the audio. Sort of annoying, but it isn't a big deal. I guess it is a delayed gratification thing. You have to wait until the auto store is done before scanning the new frequencies. There is no mod that I know of, but I haven't looked to hard for one either.

2889. Re: Where is FCC Freq Table?

Newsgroup: rec.radio.scanner
Date: 1998-08-19 00:00:00 UTC
From: Ed Tobiasz <edt@popd.Accesscom.com>
Message-ID: <35DB175B.4E67@popd.Accesscom.com>
Source record: 147206

Nothing that I know of contain the complete allocation table except for
those fancy charts that Motorola puts out. The FCC rule book does
contain this information but it's spread about. The rules are contained
in 5 books labeled Code of Federal Reguations (CFR) Title 47
Telecommunications. These rule books may be found in a good reference or
legal library. They are available from the Government Printing Office.
Cost is between $150-$200 for all 5 volumns. These books contain various
"Parts", Part 90 being the land mobile section. Even in the land mobile
section it's split between the Public Safety and Industrial Pools.

You may want to check out the following URL. It's the GPOs Web site for
these types of rules. Alas, it's hopelessly outdated. For Land Mobile
Business try looking for Section 90.75 or 90.35. Sections 90.207 and
90.209 contain the type of emission authorized for Part 90 operation.

http://www.access.gpo.gov/nara/cfr/cfr-table-search.html

Hope this helps.

Regards

Ed

Source record: 147212

roy@esp.bellcore.com (Roy Harrison) asked for:
> ... the exact frequencies of the Ferry boats running in NY Harbor.

For the S.I. Ferry, check Marine VHF Ch 19 on 156.950 MHz. They usually monitor Ch 13, 156.650, the N.Y. calling channel (standard Bridge-to-Bridge frequency) or Ch 16, 156.800, the General Calling channel, and go to Ch 19 for conversation. Note that there is not much radio traffic for the ferrys.

2897. 895 discriminator output?

Newsgroup: rec.radio.scanner
Date: 1998-08-19 00:00:00 UTC
From: harleyfxd <harleyfxd@erols.com>
Message-ID: <35DB11FE.1D36@erols.com>
Source record: 147214

I have a RS 2004 that I am considering selling to get a BC 895. Plan to play around with POCSAG moreso than I care about cellular. I also like that scan and store feature as well as the count function. Is the discriminator output on the 895 easy to get to as compared to the 2004. Is this a bad idea to swap over to the 895. I can afford both, but I won't try to keep both unless I need them.

Thanks,

J

From the FAQ article "Introduction to Scanning:"

[...]

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone
decoding squelch circuit. There are two types: CTCSS
(Continuous Tone Coded Squelch System) and DCS (Digital
Coded Squelch). In simple terms, this feature lets your
scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems,
transmit either CTCSS or DCS signals subaudibly along with
the voice information. U.S. military field radios employ
wider deviation and a 150 Hz CTCSS tone, not supported by
most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program
a specific CTCSS or DCS code into each memory channel.
Using a CTCSS or DCS decoder permits your scanner to open
the squelch only if the transmission has a code which
matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is
common for several users to share the same frequency,
e.g., my county sheriff uses the same frequency as
Chicago Police, located about 60 miles away. I want
to hear my sheriff's transmissions but don't want the
scanner to stop on or listen to Chicago Police
transmissions. This is especially a problem when
radio propagation is good, e.g., during a "band
opening," when reception range is temporarily
increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

I have an excellent BC200xlt manual in MS Publisher format. If you
don't have MS Pub, you can download a trial version from Microsoft at
http://www.microsoft.com/publisher/98/trial/tip_mscom.htm. E-mail me
and I will send the zipped file. You can print it out, staple it
together, crop it and it looks almost exactly like the original.

Charles,
In the Pro-2042 scanner that you have, I find that it is
easiest to drill the hole and use a RCA jack. To make sure that you
don't get any metal filings where they don't belong, it is best to
take apart the entire scanner which you end up doing when installing a
OS535 board. If you don't go that route, a metal punch would do the
trick and it might be best to take the top/bottom plastic covers off
and have someone else punch the hole for $5 or so. Placement is also
important if you plan on installing a OS535 at a later date.

The best advice that I can give you is to go to your local RadioShack store and pick up a copy of PoliceCall Plus. This is a frequency directory, and in the first three chapters or so it gives a good over view of radio systems, scanning etc.

After you leave RadioShack drive to a good bookstore or newstand and pick up copies of Popular Communications and Monitoring Times magazines. You'll find articles in these to help you learn the ropes.

As to a quick answer, the Uniden 895XLT is the only scanner currently on the market that does both trunk-tracking and receives the 225-400MHz military aircraft band. The radio will not, however, allow you to tune the 138-150MHz range in AM mode so you won't be able to listen to military aircraft tactical comms in that range. Other scanners will allow it, but they don't trunk-track.

Here's another "is my 895 behaving like it should" question. When I use the Autostore feature (give it limits and have it store what it finds automatically), for some reason, the audio is muted... I can see the radio stop on a frequency and the "S" meter go up to indicate a signal is present, but I hear no audio. Did they just decide that audio was not of any value in "autostore", or is my scanner working differently? And if it's "supposed" to work this way, is there a mod to change it so that I CAN hear the audio?

Thanks,

What I did might sound silly or ingenious, depending on your point of view. I have a cassette adapter for my portable CD player, so that I can play it in my car's am-fm/cassette player. I simply plugged the cassette adapter into the earphone jack of my Bearcat scanner, inserted the other end into my car's cassette deck, and TA-DAAAAA. Works very well.

Now, if I could only find a way to 'jerry-rig' an external antenna ;-)

these are two different types of alarms.
The one is a microwave motion detector. A lot of them are on the 10GHz band.
The other uses 319.5 transmitters at each switch(door or window) to relay back to the controller. It is a wireless alarm. The transmitters come on if the circuit is open/closed.

Unless you are installing a jack that needs a shaped opening, you don't want to use a nibbling tool.
Most jacks mount in a round hole-a nibbling tool will not do that well, if at all!
If you need a opening other than round(square, for example) then a nibbling tool can be useful-note:if you need a hole with metal all around(as compaired to a notch at the edge of the panel), then you will need to drill a starting hole anyway!

Despite what has been reported on these newsgroups previously by others, none of the Trunktrackers have two receivers. There is a single, triple conversion receiver (maybe that's the cause of the misinformation) that alternates between the control channel and the voice channel as appropriate.

Javier,
I bought an ICOM OPC-478 programming cable , and it works great. The cable should be readily available to you through mail order. You can get some software from Alinco's home page.
http://alinco.com/DJX10SOFTWARE/DJX10.shtml . I found the shareware version of the software slow to read/write 1200 channels + PMS and all radio info, but it is supposed to be faster in the registered version. The registered version also has more features.

I hope this helps.

Mike

2936. HF aerial suggestions ... with a twist

Newsgroup: rec.radio.scanner
Date: 1998-08-19 00:00:00 UTC
From: dmikkelsen@rocketmail.com
Message-ID: <35daae4a.12737606@news.ozemail.com.au>
Source record: 147260

Hi all.

Been fiddling with my new toy - Yupiteru MVT-7100. Great little scanner - a huge step up from my other units.

Anyway, I've been reading some of the old reviews in my Australian Radio/Communications books (I'm in Australia), and they remarked about the excellent HF performance (amongst other stuff).

Now I know I won't be able to suck in signals like a dedicated SW receiver, but I'm curious to have a play below 30 MHz. Evidently the standard telescopic aerial (and my other rubber duckies) don't work too well down so low, so I need to use something more dedicated for HF.

My only problem is I live in a flat, thus meaning no outdoor wires. I have toyed with the idea of running wire either along my ceiling or walls, given some of them are about 4-5 metres in length.

I was thinking of getting a "coil up"portable SW antenna made by Sangean - they sell for about $20 AU, and simply clips onto my telescope aerial.

Any suggestions or comments ? Much appreciated.

Anything I should keep an ear out for once I get it up and running ? :-)

Dion Mikkelsen.

From my experience they do not work well, unless one has a lot of practice. If you want a round hole visit an Electrical Supply house to inquire about Greenlee hole punches. They range from 7/16 up to 2 3/4" if I remember right. They even manufacture specialty punches for square or DB-25 shaped holes. All punches are not cheap however, they give the "most" professional look.

Unless your modifications go through FCC certification then no matter how much
modification you do to the "HAM RADIO" you cannot use it legally on the
commercial frequencies.

If I recall correctly, the Ramsey converter takes the 10th harmonic of a 40Mhz oscillation which would be 400Mhz. This is then mixed in with the incoming signal. Say that you are looking for a frequency at 860 Mhz. The 400 Mhz oscillation is added and subtracted to this input. If you tune the scanner to 460 or 1260Mhz then you would get the signal that another scanner tuned to 860 Mhz would be receiving. Usually there are filters that block all of the frequencies coming into the converter that would interfere such as a 460Mhz signal. This means that when you tune the scanner to 460Mhz while hooked up to the converter, you are getting 860Mhz only and not a signal originally on 460Mhz.

I have an excellent BC200xlt manual in MS Publisher format. If you
don't have MS Pub, you can download a trial version from Microsoft at
http://www.microsoft.com/publisher/98/trial/tip_mscom.htm. E-mail me
and I will send the zipped file. You can print it out, staple it
together, crop it and it looks almost exactly like the original.

Can anyone else hear data (reflex) on 940.2375 or 940.2125 in your
area? How about some licensee data? None of my references list either.
Also, do they use reflex for things other then pagers? The length of
the data received would suggest it's going to a PC or something like
that..any input would be appreciated!

2965. Scanners bought from CEI

Newsgroup: rec.radio.scanner
Date: 1998-08-20 00:00:00 UTC
From: Ken Ascher WB8LIT <cei@mediaone.net>
Message-ID: <35DC80B1.D0B24A2C@mediaone.net>
Source record: 147034
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Thank you for your comments about the RELM HS200 handheld
scanner. The scanners we distribute at Communications Electronics,
Emergency Operations Center are all new factory fresh merchandise.
When we purchase radio receivers from RELM and other
manufacturers we usually buy 500 to 1,000 units at a time.
We get a significant discount for purchasing in large quantities
which is normally passed back to our customers and clients.
This usually results in a lower price to you. When we resell these
products through our different sales division to our dealers, the price
they resell at is usually higher.

As you may know Daniel, a CEI customer benefit is our 61 day
satisfaction guarantee return policy as explained in our customer benefits

section of our web site http://www.usascan.com. When an item is
returned to us, we return it to our vendors as part of our quality
assurance
program. As a customer benefit, CEI does not charge a restocking fee
as we want our customers to be 100% satisfied with the equipment they
purchase.
For example, we recently returned a few hundred radios to Uniden that did
not meet our quality control standards or were returned
to us by our customers simply because they wanted to test a different
model.
If you are not delighted with your purchase, simply return your
merchandise
freight prepaid within 61 days from our date of shipping.

The radios we return to the manufacturer are usually resold in their
company stores at a discount with a reduced limited warranty.
For example, we recently returned many Trunktracker radios to Uniden.
After a quality control inspection, the Bearcat 235XLT's we returned to
Uniden
were then offered to Uniden customers at a reduced price, currently
$165.00.
Instead of the standard limited one-year factory warranty on new product,
the like-new Uniden product has only a ninety-day limited warranty.
Although the refurbished product which is sold in the Uniden store is
"like-new", please remember it does not usually have the latest features
such
as the valuable attenuator feature. Many customers have asked us to update

their "like-new" Bearcat 235XLT scanners with the attenuator or other
features

but this usually can not be done.

I know our returned product sent back to Uniden is popular
because it is quickly sold out. If saving money is a concern to you,
we recommend you order from the Uniden internet store.
When you order refurbished Bearcat 235XLT's from Uniden at
http://www.uniden.com you currently save $4.95. The shipping/handling and
insurance charges are usually lower through the Uniden store then CEI as
we
offer additional services and benefits. However, please remember
the "like-new" product has only a ninety-day limited factory warranty and
not the
standard one-year limited factory warranty. Refurbished product usually
does
not incorporate the latest features such as the attenuator or software
upgrades.

To answer your question regarding the sensitivity and intermod
specifications on
RELM radios, I recommend you contact Mr. Bill Cole at RELM. The number at
RELM is 1-800-422-6281 or their E-mail is relmservice@relm-comm.com.

As a additional CEI service, if you need help, don't panic. You will
find the customer service telephone and fax numbers to most of the
products we distribute by visiting our web page at http://www.usascan.com
and selecting the appropriate catagory. In addition,
you should find information about the country that manufacturered your
product by
clicking on the flag on the product pages in our website.

I hope this answeres your questions, but if you need further information,
please
call me at 1-800-USA-SCAN or send me E-mail at cei@mediaone.net.

2966. Sneakpeek explanation and summary for rec.radio.scanner

Newsgroup: rec.radio.scanner
Date: 1998-08-20 00:00:00 UTC
From: sneakpeek@talkway.com
Message-ID: <ZgTC1.1452$Mw1.924525@c01read01.service.talkway.com>
Source record: 147035

We developed SneakPeek postings as a result of many Usenet users' desire
for a summarizing tool that would help them skim through the most active
threads. Thus, SneakPeek postings are intended to help users with limited
time keep abreast of group discussions, stay in touch with more groups,
and check out new groups quickly.

Usenet is an environment where every voice should count equally. However,
while some users have found SneakPeek postings useful, others have tried
to shout it down, potentially resulting in the tyranny of a vocal few.
Therefore, we encourage all to post their constructive opinions so that we
may democratically decide if there is room for SneakPeek postings in Usenet.

We have that in the Dallas/Ft Worth area too.
All I have been able to find out is that 940-941 and and 930-931 MHz
is allocated to Narrowband PCS. I don't know what it is or who uses it.

An Excellent reply from a reputable company. I recently purchased a scanner from CEI (BC235XLT) and have had a very positive experience. The operator was very courteous and informative. I had no suprises and am a very satisfied customer. I will do business with CEI again. I'm sure there are many others that feel the same. I am very glad to see a response such as this, it reinforces my willingness to do business with a comoany that understands the "Customer Service" concept. Thank you to Ken Ascher, Chairman/CEO of Communications Electronics Inc. for his detailed response.

CEB
Thank you for your comments about the RELM HS200 handheld
scanner. The scanners we distribute at Communications Electronics,
Emergency Operations Center are all new factory fresh merchandise.
When we purchase radio receivers from RELM and other
manufacturers we usually buy 500 to 1,000 units at a time.
We get a significant discount for purchasing in large quantities
which is normally passed back to our customers and clients.
This usually results in a lower price to you. When we resell these
products through our different sales division to our dealers, the price
they resell at is usually higher.

As you may know Daniel, a CEI customer benefit is our 61 day
satisfaction guarantee return policy as explained in our customer benefits

section of our web site http://www.usascan.com. When an item is
returned to us, we return it to our vendors as part of our quality
assurance
program. As a customer benefit, CEI does not charge a restocking fee
as we want our customers to be 100% satisfied with the equipment they
purchase.
For example, we recently returned a few hundred radios to Uniden that did
not meet our quality control standards or were returned
to us by our customers simply because they wanted to test a different
model.
If you are not delighted with your purchase, simply return your
merchandise
freight prepaid within 61 days from our date of shipping.

The radios we return to the manufacturer are usually resold in their
company stores at a discount with a reduced limited warranty.
For example, we recently returned many Trunktracker radios to Uniden.
After a quality control inspection, the Bearcat 235XLT's we returned to
Uniden
were then offered to Uniden customers at a reduced price, currently
$165.00.

Instead of the standard limited one-year factory warranty on new product,
the like-new Uniden product has only a ninety-day limited warranty.
Although the refurbished product which is sold in the Uniden store is
"like-new", please remember it does not usually have the latest features
such
as the valuable attenuator feature. Many customers have asked us to update

their "like-new" Bearcat 235XLT scanners with the attenuator or other
features
but this usually can not be done.

I know our returned product sent back to Uniden is popular
because it is quickly sold out. If saving money is a concern to you,
we recommend you order from the Uniden internet store.
When you order refurbished Bearcat 235XLT's from Uniden at
http://www.uniden.com you currently save $4.95. The shipping/handling and
insurance charges are usually lower through the Uniden store then CEI as
we
offer additional services and benefits. However, please remember
the "like-new" product has only a ninety-day limited factory warranty and
not the
standard one-year limited factory warranty. Refurbished product usually
does
not incorporate the latest features such as the attenuator or software
upgrades.

To answer your question regarding the sensitivity and intermod
specifications on
RELM radios, I recommend you contact Mr. Bill Cole at RELM. The number at
RELM is 1-800-422-6281 or their E-mail is relmservice@relm-comm.com.

As a additional CEI service, if you need help, don't panic. You will
find the customer service telephone and fax numbers to most of the
products we distribute by visiting our web page at http://www.usascan.com
and selecting the appropriate catagory. In addition,
you should find information about the country that manufacturered your
product by
clicking on the flag on the product pages in our website.

I hope this answeres your questions, but if you need further information,
please
call me at 1-800-USA-SCAN or send me E-mail at cei@mediaone.net.

You were just lucky to be able to buy a great scanner like the pro
60 for such a low price. would you sell yours for $125 or $150?? I
guess not so you will have to wait till 1999 then Radio Shack might
put on another sellout of their scanners. Just my 2 cents. JERR

that should be .5uV for Relm, 1.0uV for the Pro-50

Lower is better when it comes to sensitivity.

> Is this performance difference normal

In this case, it's normal.

> Also, does the BC235XLT have a longer range than the HS200 in the
> 160-161MHz range?(Its sensitivity spec is .25uV vs .5 uV)

Yes, it will be more sensitive.

> I ask because I am thinking of buying a BC235XLT from CEI(again at a
> great price of $169.95). I understand that a ham transceiver would
> provide better reception, but I am trying to stay cheap.

I've found that there's quite a difference in sens. as you go through
each band of a scanner. The sens. must be used with a reference.
Typically this is 12dB SINAD. 12dB SINAD represents a noising signal
that is still copyable. It is not the same as 20dB Quieting or Squelch
threshold.

12dB SINAD is also measured in -dBm, which I prefer (and make more
sense).
-119dBm for 12dB SINAD is excellent (0.25uV). The bare minimum I would
expect to put up with is -117dBm for 12dB SINAD (0.32uV).

Hope this helps!

I am using the same package, use TOOLS ----> ADD INS and check book analysis packs. This will allow the Visual Basic (VBA) routines to run and link the proper Library of Function to calculate the data to download to the PRO-64.

AOR 8000, pre-ban full coverage reciever. No gaps in coverage. With Soft Case & 4 AAA rechargeable batteries, antenna, wrist lanyard, cigarette lighter adapter & AC adapter, Manual, Original box. Unit is in like new condition, one year old, and used only about 25 hours. Also included is the Opto Electronics Optolynx, boxed, with manual and AOR connector cable, Installation disk (with radio manager for windows), A/c adapter & warranty card, along with the Scancat-Gold for Windows (v7.011), Scanner Wear soft control 2.0 demo disk, Signal intelligence scan*star plus demo disk, manual, quick start card, envelope software/manual. Would like to sell this as a package for $550, but would entertain all offers.

Also have a new Radio Shack LCD Frequency counter (cat. #22-306) which is the newer design with hold function, boxed with manual, and antenna. Used only about 6 times. $75.

All items are fully guaranteed, and your money will be cheerfully refunded if you are not satisfied.

3002. BCT-12 mods? Continuous scan?

Newsgroup: rec.radio.scanner
Date: 1998-08-20 00:00:00 UTC
From: "Dave A." <sasakikojiro@earthlink.net>
Message-ID: <35DCE2A6.D76425D5@earthlink.net>
Source record: 147071

Hello! Has anyone done any mods tot he Uniden BCT-12 unit? I wanted it primarily for CHP detection, and wanted to modify it so it doesn't stay on one frequency after stopping, i.e., no delay when the channel reception halts for a second. THe reason is, I get a lot of clutter and junk in my area, and have to end up locking out almost all channels but one or two. I'd still like to monitor the channels with interference, just in case.

Thanks in advance!

-Dave

3003. bc200xlt help- need manual/copy!

Hello!

I just recently acquired a bc200xlt unit that has no instructions.
Could anyone with access to an instruction sheet handy please scan and
email it to me?

This is my first scanner (aside from a BCT-12, which really doesn't
count), and I'm having a heck of a time understanding how to work the
thing.

Thanks!

-Dave

Oh well..I knew it was too good to be true! However it figures out the
end of the conversation..it does it as well as trunker.exe with one
receiver dedicated to the control channel.

If you stick a piece if masking tape loosely on the inside of the
back of the scanner to catch metal shavings and wrap some more around
the blade to prevent giving the scanner a lobatamy..a drill works
fine!

I have one on there labeled as reflexABCD..that's what pocflex says it is anyway, but it looks like binary data on the screen Found it on 940.2125--maybe it's a new pockettalk freq? I've heard they use flex to transmit data..any way give it a listen!

I really want to apologise to all the scanner people in rec.radio.scanner and alt.radio.scanner for my shithouse attitude, off-topic postings, forged emails, rogue-cancels and other miscellaneous mail bombs (especially to my BumChum Billy "big butt" Cheeks!). I also want to apologise to clark college for illegally accessing their system's nntp news server externally and injecting fake newsgroup postings and making rogue newsgroup cancels. Most of all, I would like to say that since I'm gay and demented I have no control over my actions. My only real hobby is rooting around with my warp-infested floppy dick and shoving dipoles up my lover's rear ends.

I promise from now on to do the following:

1. Make no more off-topic posts
2. Refrain from talking about anything but scanners
3. Resign from the "officer colostomy for brains position"
4. Continue to stalk my lover Bill Cheeks

F.S. AR 8000

I have an AR 8000 with the scout mod, cell blocked, works perfectly, with box, manual, cig lighter adapter and nicads. It has a crack (I do not know if it goes all the way through the case - I have not had the nerve to open it up to see) around the hole for the scout mod. I will throw in a hard leather case to help make up for this problem.

$375 shipped in the Lower 48.

E-mail if interested.

I just wanted to let everyone know that I am gay. I've been a really
bad
mood these last few months, as I broke up with my long time lover.
Don't
worry, I'll be much less abusive now since I've found a brand new
boytoy
to pump my asshole into a bloody mess nightly again! I'm really sorry
about any problems I've caused in the newsgroup! Gotta run, as I have
10'' of manhood calling me right now!!!

3023. "E Loc" Message on Bearcat 760XLT

Newsgroup: rec.radio.scanner
Date: 1998-08-20 00:00:00 UTC
From: Brian Carlson <bcarlson@cyberramp.net>
Message-ID: <35DBD952.3491@cyberramp.net>
Source record: 147092

Hello,

I have a BC 760XLT, but no manual. From the information
I have seen on the web, I should do the following to enter
a new frequency:

19 MAN 460.000E

However, I always get an "E Loc" message. This happens
for any frequency. The L/O is displayed initially since
the channel is not programmed (000.000).

What do I need to do to get around this problem? Responses
to my e-mail address would be appreciated.

Thanks,
Brian

>and can I get a manual for it?
>sebring@zebra.net

You just named the model. Its a Bearcat III, it was made be Electra before Uniden bought them out years ago. If you write Uniden they may be able to provide you a manual at a modest cost. The scanner from what I recall is crystal fed, operates on VHF-Lo, VHF-Hi and UHF. It is very reliable and my parents had one for years.

Even with a scanner that does not have the regular Fm radio coverage, many
Fm/tv stations use the 900 mhz range as a relay link.
if you have a 900mhz scanner, just scan that range, and you may be able to hit
one or more of these audio links.

I have one. It works pretty well, although being double conversion it is interference prone. When in PL or DPL mode, that is not much of an issue, although strong interference can garble any signal whether it uses PL or not. It's less sensitive on most bands than my BC-235xlt. It probably gets cell images, but I don't usually use it for 800 MHz, unless I'm looking for PL/DPL on a particular conventional frequency.

On Thu, 20 Aug 1998 06:01:15 GMT, jmackey@parg.org (John Mackey * KA0SSF *) obviously did not write:

[Forged post snipped]

For those of you who post good technical data and facts, please ignore this post.

I've been reading this group for about a week now since I just got a scanner and about all there is are these bitch wars. I read other groups regularly and this one takes the cake for stupid people.

Here's what you do: Get yourself a news reader with a kill filter on it and FILTER OUT the people you don't like. If someone posts something that you don't like then just add them to your kill filter and you will never see them again.

Don't try all these fascist tactics of getting people blocked from the newsgroup, forging posts, and name calling. Act like adults, not someone who sits in your trailer all day drinking Budweiser and listening to a scanner.

I now plan to add this topic and the posters to *my* kill filter so I don't have to look at this swill again. I've been doing that all along but it's impossible to stay ahead of it in this group.

Exercise a little restraint and this newsgroup could be a useful place, which is what the majority of us want.

Dont' mess with ACE communications.... I bought a $429 AOR-2500 from
them about 6 or 7 years ago...the first one arrived not working (I paid
overnight) and the second one never worked right. I later found out that
they sold me a refurb! I never got a refund on the overnight....I keep
the scanner for five years before I got rid of it...Never again!

>if you have a 900mhz scanner, just scan that range, and you may be able to hit
>one or more of these audio links.

Ah, the studio-transmitter links! Yes, you can monitor those if you
are directly in a line that runs between the studio and transmitter.
You might be able to be some few degrees off to the side, and probably
behind the receiving antenna. It does work well, and you hear
everything you'd hear on the station. I've tried it successfully with
AM and FM stations, but does it work for TV stations? They can be
heard on their own audio channels as well.

I understand that monitoring the STL freqs may be opposed by the ECPA,
but am unable to verify that is true.

I just received my HS200 a couple of days ago, and so far am
disappointed. It range is definetely shorter(for 160-161MHz, rail is
the only band I listen to) than my old RS Pro-50, despite the fact it
is listed with better sensitivity in this band(.5 microVolts versus
1). The selectivity is only slightly better. I bought it new from
CEI at an incredibly good price($169) so I am wondering if maybe they
are selling factory rejects, though probably not.

Daniel Dave Pepper

3046. Any problems with scanners bought from CEI?

Newsgroup: rec.radio.scanner
Date: 1998-08-20 00:00:00 UTC
From: dpepper2@yahoo.com
Message-ID: <35dc47cc.2016990@news.mindspring.com>
Source record: 147115

I just bought a Relm HS200 from CEI at an incredibly good price($169.95), but have been disappointed in its performance in the 160-161MHz railroad band when compared to my old Radio Shack Pro-50. Its range is shorter(even though its sensitivity specs are better, 5uV for the Relm vs. 1uV for the Pro-50) and the intermod is only slightly less.

Is this performance difference normal, or is it possible that the CEI units are cheap because they are factory rejects, or other factors. I am not trying to slam CEI(unless this is the case), but rather trying to determine why the poor range since the sensitivity specs are better.

Also, does the BC235XLT have a longer range than the HS200 in the 160-161MHz range?(Its sensitivity spec is .25uV vs .5 uV)

I ask because I am thinking of buying a BC235XLT from CEI(again at a great price of $169.95). I understand that a ham transceiver would provide better reception, but I am trying to stay cheap.

Thanks in advance,

Daniel Dave Pepper

I've walked into a few "police stations" and requested to view their FCC
license and was told "it was restricted access". Upon talking to the
police chief or other administrative officer and explaining the rules of
the FCC and the public access requirements stated ON the license, I was
granted access to view the license.
If you really need to know their freqs. and they insist on a "non-public
disclosure" policy, try this diplomatic approach first, if that fails...
you might try the local Public Service Commission reps. before going to
the FCC with a formal complaint.(the FCC complaint method is a long
process and requires a good "paper trail" on you're part. Sort of like a
IRS audit. KEEP ALL PAPERS YOU GET AND SEND OUT!!)

if the numbers you quoted for the radios are correct, that might explain the problem...

relm = 5uV
pro50 = 1uV

On this basis, I would expect the pro50 to be significantly MORE sensitive than the Relm. The lower the sensitivity number, the better the reception you should expect, all other things being equal.

3052. BC-350A Channels??

I caught a glimpse of the new Radio Shack catalog today (more about their catalog in another message) and they have made major changes in their scanner line-up. They are heavy into Trunk Tracking radios and light on conventional radios.

New models include the 2066 mobile Trunk Tracker. It appears to be a 2046 with TT capabilites. It is a 150 channel radio and is due out October 30.

They have a new base model, the 2050, which is a 300 channel TT radio.

They have two handhelds, one is new and one is last year's model (I did not note the model #s).

I am sure others will be giving much more details on these scanners.

Yea, I was wondering around in my local Service Merchandise store, in Troy, Michigan... they had a few of them!

The review by Rich Wells probably sums it up better than I ever could. So far, I really like it, and I've had just about all of them at one time... some twice! My favorite feature is the large controls, and easy to read markings! I'm 48 years old, and looked at one too many computer monitors in my lifetime... eyes aren't what they used to be.

George,

He forgot to mention his AOL account which he lost about 2 weeks ago. He was using it to Rogue Cancel and Forge post via various Open NNTP Servers. It's the same reason that he lost his Sprint account back in April. He'll deny this and claim that he had RA problems, but that's just a bunch BS.

This one is hard to call, but I think you left something out. Almost all PDs and SOs that I know use PL tones on all their freqs. What would you be doing with not only the freq. to the PD, but also the PL tone? I have no problem with people listening on scanners, and/or modified ham gear, but I doubt many people would know the PL tone freq. off the top of their head. Even if you did transmit, no one would hear you except another ham or scanner listener. You would probably be better off just putting out a broadcast on the local repeater frequency so one of the hams could dial 911 for you. BTW don't you have a phone patch on your local ham repeater? If not, why not?

Now as to whether the transmission is illegal - I'm not sure, would have to check, but if the situation were a true emergency as you describe, I

doubt you would get into any trouble.

John,

Why can't you at least confine your off topic noise to one group or the other? Is that too much to ask? I have conceded rrs to the flamefest, but ars should be left out of it, don't you think?

I don't know why I'm about to do this, maybe deep down I'm an eternal optimist, or perhaps a glutton for punishment, but here goes. Let's talk about scanners. ANYTHING goes, as long as it pertains to scanning. You post, and I'll reply and people can benefit from both of our knowledge and experience. This is not an invitation for a flame war, it is not a "let's see who knows more than who" contest, it's just two adults, discussing the topic of scanning. You can tell us anything, what receivers you own, what agencies you monitor, a funny or interesting story about what you heard, and so on. I just want to see you do it ONCE. Just so I know you can. Now how about it? I'll be in a.r.s. if you decide to try it.

Thanks, and have a good day.
-Phil

Well, i am a member of the ham radio community, and i can tell you that your little trunked radio system can go down at any time...then who are you guys crying to for communications, oh us annoying ham radio operators. The police around here had the same mentality until a few years back when a tornado came through and knocked out all police radio communications. The police were then knocking on our doors to fire up our radios and help them. Now the police around here have OUR frequencies programmed in THEIR radios. P.S. In a trunked radio system it only takes one repeater antenna to go dead to crash the whole system.

Believe me, I know what to do about a rape in progress. If
there's a risk that I will be hurt or killed in my attempt
to do what's right, I'll accept that risk.

A robber pulled a knife on a Circle-K employee in Phoenix
last year. Two ordinary customers with concealed carry
permits pulled out 9mm's and made a citizen's arrest.
Criminals in AZ never know who around them might be packing.

Hi all scanner technicans

Within a few monthes the Dutch Police, the Fire Dept. and Ambulance cars will start
to use digital-transmitting. So it will be impossible to receive that services by scanners.

Is there a technical women/man who can say a few words about this case?
Will we get decoders or something else, to catch that digital signals?.
Perhaps the combination computer and scanner?

Greetings, Theo

Doesn't really sound that brutal unless the system is really loaded,
the only thing I can confirm is that the emissions are REFLEX.

I'll have to look harder on the fcc site for the owner's, a quick
search turned up nothing.

>911 do so. But if you have a modified amateur HT, which as modified is not
>type accepted to use on commercial frequencies, don't trnasmit on the Police
>radio frequencies. Your doing so could cost someone their life.

You are quite ignorant of federal laws involving emergency
communication! Not making the transmission in a TRUE life or death
situation might violate the good samaritan laws!

>If you want to transmit on Police radio systems get permission from the Chief
>or Sheriff of that system before doing so. Otherwise STAY OFF!

In a true emergency situation, I don't think you would have time to
check with the chief before reporting the catastrophe!

I saved this from someone else's old response.

The Staten Island Ferry uses VHF marine radio for it's communications.
Channel 19 156.950Mhz is the "House" frequency.Bases are in St George in SI &
Whitehall in Manhatten.The boats are usuallycalled up on channel 13 156.650Mhz
or
16- 156.800Mhz and asked to "go to house".
Ferries are called by name ie. Barbari,Lehman, Kennedy,Legion,etc. Also there
is terminal operations on 158.730Mhz,but never verified.

Good Luck
Robert

>output with my PC... What could it be?

The output has to be on CTS, your interface might be on DSR, if that
is the case jump pin 5 & 6 together..or try one of the newer mdt
programs available. I have one on my site also, you could try it!

try starting it with the command line switch /re
eg mdtw1234 /re

Also, check your setup with pd-204 on a pager channel like 929.1375
http://www.bearnet.demon.co.uk/pocsag/pd-204.zip

Also, make sure it is mdt you are trying to decode, you can listen to
a sample at my site, addr below.

Oh what a dilema....
If it were me, and LIFE was truely about to be lost, then I'd do it.
But, a few questions rise to mind....
Why do you have the 16 CHannel radio.....I would suppose it has some
legal purpose...so why not contact the service you normally use it
for, instead of dialing up the PD.
ALso, many cities, having to share their freqs, are using PL tones,
and squelch encoding.
You may not even be heard, or if you are, and your unit number doesn't
show up on the screen, the confusion of that fact, and wondering if
the call is bogus, will eat up any time you may have saved.
Realistically, anything goes in an emergency, and if it's a life
involved.....truely being threatened...then I'd live with the FCC
consequences.
But there are better ways to get your point accross....
I have a Cell with 100 Speed dials in it, accessable by name.
I have programmed in every local PD's non-911 number....and it has
been very useful.

Javiation in Europe has a cpu you can install in it for coverage of
the cell bands, but beware it is not a mod for a novice..and it
searches in 12.5k steps. Not terribly useful for American cell
monitoring which uses 30khz steps. Many older cell capable scanners
can be found in pawnshops for very reasonable prices, I got a PRO-43
for $40 from one! In Miami, I'll bet you have one on every corner!

I have amod for you!
It's real simple. Put one finger in a light socket, step on the radio after you have ran a 14 guage wire to a good ground and then get some one to turn the light on for you. I can guaranty that you will modify not only your scanner, but your life as well.

I can understand why you want to modify the radi. I agree with everything but the cell mod. I'm sorry but I can't see any good use of that. That is unless you want to go jail for modifying your reciever to recieve cells and maybe perhaps have my radio that is legal confiscated. Besides what good could get from it. I find most non emergency radio traffic absolutely boring. I can't image listening to billy bob lou talking to betty lou about a very friendly liasion later. And besides when you talk on the phone do yhou want yhour neighborto hear what you are saying.

Okay-Okay I'll go way but please consider the damage that you might do to your unit, and to the hobby when you make illegal mods.

Bill Carty.

Nah, not HAMS, but their local radio service.

HAM repeaters can go down anytime also.

In a properly designed, and purchased commercial system, one failure
will not take a system down.

>around here have OUR frequencies programmed in THEIR radios. P.S. In a trunked
>radio system it only takes one repeater antenna to go dead to crash the whole
>system.

Nah. Again, not in a properly designed system.

Exactly. And the FCC has stated, that the interpetation is that
someone can use any means of communications within part
97, only. IE, a novice can use an extra frequency.

They have stated that the rules do not permit in any way, the use
of another services frequencies through part 97.

John,

Don't you really mean that you've lost 2 accounts over the
past 5 months?

Everyone knows that you lost your Sprint account back in April
for being a Rogue Canceller and Forger. You also forgot to
mention that you lost your secret AOL account about 2 weeks ago
foro Rogue Cancelling and Forging post via various Open NNTP
Servers.

I'm sorry. You are not stupid, you are retarded, so I'll have to go
r-e-a-l s-l-o-w so you can fully understand.

First of all, I'm older than you, besides most schools systems are out
for vacation.

Let's get back to the radio thing, OK?

1. I have an Icom U-16, two-way radio, than can be programmed (in the
field) to transmit on a local police frequency.

2. I witness your mother, or wife, or sister, being raped, at gunpoint.

3. Nobody else is around.

4. I cannot help the victim because the suspect is armed.

5. I have two choices:

a) I can push the transmit button and tell the police dispatcher where
the crime is being committed,

(or)

b) I say to myself, "Oh lord, using this radio is a crime, I'd better
not say anything, that lady might get killed, but I'm a bad person if I
use the radio, Oh well."

As a Police Officer and a Ham I can honestly let you know that no Police officers are jealous of any Ham. Most Hams are Police wannabees. They run around with their radios blaring noise and think they are Police Officers. Actually Hams just get in the way and could cause someone to get hurt or killed. They know nothing of how to act reasonably in a life or death situation.

If you are near a phone, use it. 911 is a free call. If you have access to a Ham repeater call on it or if equiped with autopatch use it. If you have a cell phone use it. If you have to ask someone that has a cell phone to call 911 do so. But if you have a modified amateur HT, which as modified is not type accepted to use on commercial frequencies, don't trnasmit on the Police radio frequencies. Your doing so could cost someone their life.

If you want to transmit on Police radio systems get permission from the Chief or Sheriff of that system before doing so. Otherwise STAY OFF!

While FCC rules seem to permit this where the protection of life or protperty is concerned, I would advise you NEVER to transmit on law enforcement or fire frequencies without proper authorization.

There have been cases where the police have seized the radio equipment of persons doing this and even one ham, who was a civilian employee of a department, lost his dual band HT after calling in for a medical emergency on the frequncy of the department he worked for. (happened this past year in Calffornia, see QST mag. for details)

If I were in that situation, I would first try the ham repeaters, even if I wasn't licensed, and that failing, perhaps an ambulance service or hospital channel (155.340 is used in many places). Better yet, get your ham ticket and use a repeater auto-patch. Or buy a used cell phone. Even one that is not connected to a service can still dial 911.

The Bearcat III was an early model crystal scanner that covered 2 bands. It had plug-in moduals for either low-band, hi-band, or UHF. These were very popular radios and many are still in service. They were replaced by the Bearcat IV, which would cover all three bands. Crystals are still available, but the last I heard, service on these is hard to get as they haven't been made for many years. You may post for someone to photocopy a manual for you.

The only FCC regs that specifically address this kind of
situation are contained in Part 97, which regulate the Amateur
Radio Service. Those regs allow licensed Amateurs to use
whatever means of communication they have at their disposal
in an emergency situation IF life and property are threatened and
IF no other means of communication are available. So, that's three IF's
that would have to be met (1. licensed Amateur 2. life or property
threatened 3. no other means of communication available).
As other posters have pointed out, the liklihood is that even if you
meet all three tests, you're likely to get a major hassle from the
folks whose frequency you transmit on!

That is why there are pay phones around. 911 is a free call. If you were to transmit on our system with prior authorization you would not have that radio long. If you want to be a Police Officer why don't you go through the training and become one. Don't be a wannabee.....

Like everyone else I am trying to figure out the new SmartZone system for the Harris Co. Trunked Radio system. I have posted what I am sure of at http://members.aol.com/jdhtex/houstonscan/hcso.htm . If anyone is familar with the system can you check that out and let me know what you can add to it. That is just for the sheriff's dept. I need to add constables and other services to it also.

Thanks
John Habbinga

>Now just how is stupid here ?

You are.

The guy witnesses, in person, a crime. No police are around.

He has a transmitter that will operate on the police frequency, so he
keys up and reports it on that frequency.

That seems very simple to understand from where I'm sitting. Why are
you having so much trouble with it? I've seen three people explain it
to you, yet you're writing letters to the FCC to get frequency
allocations! Sheesh!<tm>

Now, I should probably type that again very slowly so you can
understand it.

Shame you have to lump all law enforcement officers under one. What did the
Law Enforcement community have to do with Oklahoma City, Boston, and others.
I guess if you are "breaking the law" then surely you don't want to be around
them.

If you don't like the LAWS change them don't break them........

but this was niot the case presented...the case presented stated that the he had heard on the police freq. the emergency call.
My statements were made toward this case...not the one you presented...

the way it was presented, the the cops WOULD have heard the call, thus no need to use the freq. to alert them.

In your case presented here, oviously the cops would need to be told....

lets at least discuss the same situation...hell, I could come up with cases to defent most anything, but that is not what was originally stated.

Thats all.

The answer to this question is NO. You cannot legally transmit messages on the police/fire channel.

WHY???? You are not licensed by the FCC to operate on that radio frequency. Police/Public Safety agencies have (or should have) valid FCC licenses that authorize them to operate within certain perimeters. Members of that agency are authorized by the FCC to operate under the umbrella of that license due to their duties and employment.

THER IS NO EXCEPTION.
WHY??? Imagine 10 citizens with 10 two-way radios broadcasting messages on public safety channels. Or 100 citizens? Then a couple of these radios get lost/stolen and land in criminal or prankster hands....

USE A CELLULAR TELEPHONE or PAYPHONE....

Part 97.403 says:

No provision of these rules prevents the use by an amateur station of any means of radiocommunications at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication systems are not available.

At its disposal: Frequencies that your license allows you to operate on.

Normal communications means items like the phone, cell phones, word of mouth, public safety communication networks, smoke signals or whatever. No where does it give permission for a HAM to transmit on any other frequencies except those assigned to the amateur radio service.

Part 97.403 does not give you the right under you ham license to operate on any frequency you want. Even during an emergency...

I'm not a HAM but I can tell that you are full of shit. The amateur
radio leagues in my state are well organized and well regulated. In any
type of emergency or disaster situation they are (more than) prepared to
take control and provide essential communications - even when your
police radios fail.

Excuse me? If I use a two-way radio to save someone's life, how could I
"cost someone their life?" Are you referring to a "startle reaction"
when the officer hears my pleas for help, and is awakened from his nap,
or he spills some Dunkin' Donut coffee on himself?

> If you want to transmit on Police radio systems get permission from the Chief
> or Sheriff of that system before doing so. Otherwise STAY OFF!
>
> COP

Good idea! If I witness a robbery, rape, or shooting I'll call the
police chief at home and ask if I can use their repeater for 10 seconds.

Great Idea!

You're Busted!!!!!

+AD4-
+AD4-Let's get back to the radio thing, OK?
+AD4-
+AD4-1. I have an Icom U-16, two-way radio, than can be programmed (in the
+AD4-field) to transmit on a local police frequency.
+AD4-
+AD4-2. I witness your mother, or wife, or sister, being raped, at gunpoint.
+AD4-
+AD4-3. Nobody else is around.
+AD4-
+AD4-4. I cannot help the victim because the suspect is armed.
+AD4-
+AD4-5. I have two choices:
+AD4-
+AD4-a) I can push the transmit button and tell the police dispatcher where
+AD4-the crime is being committed,
+AD4-
+AD4-(or)
+AD4-

+AD4-b) I say to myself, +ACI-Oh lord, using this radio is a crime, I'd better
+AD4-not say anything, that lady might get killed, but I'm a bad person if I
+AD4-use the radio, Oh well.+ACI-
+AD4-
+AD4- +AD0-RadioBoy+AD0-

Or if you used a little sense, we have a really neat system that allows a person to contact others legally. It is called a phone-cellular or landline-either way the call is free. Being that you have no business possessing the radio and having it programmed for police frequencies, your justification for using it is in question. You most likely have not been trained on the use of the police frequencies and what various codes utilized may indicate. In other words, you will probably interrupt something because you don't know what a felony alert or code red tone is.

If you think that having a radio there that is programmed for police frequencies for a safety device, think again. If you can afford a radio, you can afford a cellular phone. So go buy one and you will find you can also use it for other things than contacting the police.

State laws vary but you may find possession of a device capable of interrupting police communications is illegal. Give up the thought of having this to save someone and get a cell phone.

>Dave McGuire

That depends who you are. Let's assume for the moment you are a
licensed amateur radio operator. If you are not, the answer is NO.
Personal opinions aside, FCC Regulations state:

ï¿½ 97.111 Authorized transmissions.

(a) An amateur station may transmit the following types of two-way
communications:

<SNIP>

(2) Transmissions necessary to exchange messages with a station in
another FCC-regulated service while providing emergency
communications;

ï¿½ 97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human
life and immediate protection of property when normal communication
systems are not available.

I was going to request that we all stop shouting our opinions and
actually use some facts. Unfortunately, the facts are vague.

What "not available" means is probably open to some interpretation.
Does it mean "I can't get to a phone in time" or does it mean "The
hurricane knocked out all the phone lines"?

It certainly applies to the second, but does it apply to the first? Probably up to the court system, unfortunately. Technically, it MIGHT be permitted. However it WILL be unexpected, and seen by the police as interference, right or wrong.

The better solution would be to use a cell phone (even without signing up to use it you can call 911), or a pay phone.

>
>Can anyone cite FCC regs? Is this technically permitted?

I wouldn't use it, unless someone's life was in immediate danger,
there was no other way to contact anyone, and even then, I'd hesitate.

(1) What the hell would you be doing with a radio like that anyway?

(2) If you're using a frequency agile radio, why not put the report in
to 911 via a ham autopatch? You won't lose much time (maybe one
minute).

(3) Cops are extremely protective of their radio traffic. They're not
fond of you listening (though they know they can't do a damned thing
about it) and the dispatcher in particular does not want you in their
hair (they have enough problems keeping their own folks in line).

Ultimately, you do have the right to yell for help using any means
necessary --from smoke signals to satellite radios. However, you'd
better have good justification for the resources you used, and you'd
better have a bona-fide emergency.

While the latter criteria sounds probable enough, I don't think anyone
will put up with the former.

This isn't rocket science. Just listen to a metropolitan police
operation from rush hour onward. You'll hear lots of life and death
radio traffic on the air. To take precedence over that kind of radio
traffic, you'd have to be dealing with something like a madman armed
with a nuclear weapon threatening to set it off.

Only then might they sit up and take notice.

Hey if your not a HAM how can you speak for the HAM community? I know for a fact since I am a HAM and can tell you that the trunk systems we have will out do any ham system. If ours have a problem, which it hasn't since it was installed three years ago, and makes the system in-operable there are other city's radio systems that are programmed into our radios that we can use. Also most HAMs are just WANNABEES and are not trained properly. For my police certification I had to go to the law enforcement academy for 560 hours of training, take a state test, go through a training period with a training officer and all the while taking other classes to keep my state certification.

Also if you witness a robbery, rape or shooting please use a phone to report it. Don't try and play COP......Give the person answering your call all the information you can and let the Police handle it.

But I guess with the attitude you have towards the Police maybe you should handle every situation yourself and don't bother the COPs that are at the "Donut" shop.

Don't overlook the BC895 either. It has 300 channels, versus 500, but it has trunk tracking and computer control, which the BC9000 doesn't have. It's got great sensitivity too. There's an awful lot of bang for only $200-$220.

Boy, you know nothing.

If you are a licensed amateur operator, you may use ANY MEANS of communication
IF:

- you are a validly licensed amateur operator
AND - life or property is in danger
AND - no other communication is available.

Like Dave (K4CC) said, you can find that in Part 97 of the FCC rules.

So: do your homework before posting misinformation that could indirectly kill
someone. I've certainly learned my lesson (about posting misinformation)...

You said the magic word "trains". I and three other hams I know are reserve deputy sheriffs and have gone through 560 hours of training, on the job training, state test and we continue taking classes to keep certification.

The problem I am relating to is the WANNABEE HAM with no training but picking up a HT and thinking he is a COP.

No you get real. He did not say it was a family member. I agree, if it is a family member I will get involved, but then again I am trained to handle situations like that and if you are trained then be it. Most people who intervene find themselves either hurt or dead because they don't know what to do.

I have all this waiting to swap for hf receiver with digital readout for

decoding.
Drake has noisblanker board, and crystal calibrator board fitted, all
slots are full, radio works as this radio should, but it needs some
loving care has manual but not original.
Laptop also has 500mb h/drive and spare 124mb h/drive, this 386 is not
one of them big
bulky things,
it is the size of laptops that are made today.
what can i say about pro-63 except it is a pro-63.
main problem is i am in the uk, lots of excpence.
Thanks.......Jim. UK only.

Source record: 146984

>On the BC 350A can you actually program 50 channels
>or is it only 20.

Police Svc Search: 739 prepgmd; 20 programmable
Fire/EMG: 197 prepgmd; 10 programmable
Air: 1160 preprgmd (All Acft)
Marine: 90 prepgmd (All Marine)
Wx: 7 prepgmd (All NOAA Weather Svc)
Private: 0 prepgmd; 20 programmable.

So you have a TOTAL of 50 channels available for programming, but only a maximum of 20 can be scanned at any time.

Here is what I have, if I remember correctly they are from Ron Katz's web site. I used to get a lot of activity on them up until November 97 then things went quiet, rumour is they went trunked. I still get the odd transmission with annoying tone codes being sent before and after the dispatch. I dont think I have ever picked anything up other than the dispatcher.

ID REGION SERVICE DESCRIPTION FREQ PL
35 MISSISSAUGA FIRE DEPT. TACTICAL F2 154.235 167.9
34 MISSISSAUGA FIRE DEPT. OPERATIONS 154.950 167.9

regarding the revised sensitivity figures for these two radios.....

Got your message with the corrected sensitivity figures. I'd only make two additional comments....

First, there isn't that much of a difference between 0.5 and 1.0 (certainly not as much as between 5.0 and 1.0), so in general, I would expect the radios to be essentially the same in performance, rather than one being clearly superior to the other.

Second, the figures probably represent either an average of a large number of sets tested (with some being better and some being worse), or perhaps the figures were the BEST they ever made, with the typical radio being not quite so good! Either way, the chance that you could reach up and pick a radio off the shelf and have it match the published figure is probably wishful thinking (unfortunately). Just like all cars are not equal when they roll off the assembly line, so too are all radios not created equal.....

Another thought comes to me as I finish this overly long message... there is a certain amount of internal noise produced by a radio, especially these synthesized radios, and this competes with the incoming signal. I think a manufacturer could artificially improve his sensitivity rating by turning off the local oscillator to decrease some of the noise while taking a so-called sensitivity reading. In other words, do these numbers really mean what we like to think they mean, or are they more like the wattage ratings on hi-fi amplifiers, or the horsepower ratings on cars???

Sorry to go on and on.....

To see a list of which ones are capable, visit
http://w5gb.nmsu.edu/kc5kto/mods.html

Then visit http://www.ebay.com and search "scanners".
Find the appropriate model and make your bid.

No new over the counter models in the USA sold today can be
easily modified for cellular reception.

Hi All,

I have an Icom R71A which has an option board installed I would like to identify.

The board is labeled SPRINTPAK and ICOM/AD. It has a RS232 line driver IC (1488) on the board, therfore I assmue it is a type of PC interface. It connects to the CPU board and sits above it inside the radio.

Anyone know the manufacturer of this board? Is it CI-V compliant?

Regards
Aaron

I belive what you guys are hearing is Narrowband PCS (NPCS). They use primarily 25 kHz or 50 Khz channels and are paired. The base talks out in the 940 MHz range and the pagers talk back(milliwatts) in the 901 MHz range (39 MHz split just like 900 MHz trunking). The frequencies are listed in FCC Part 24 specifically sections 24.129 and 24.130. You can get the channel info from the GPO website.
I know Skytel has a nationwide system up and I believe PageNet and a couple of other companies aren't far behind. FCC beta freq site might help you identify the particular user in your area.
They typically send out multiple subcarriers over the same 940 MHz transmitter and it really sounds brutal on a regular scanner.

I don't know where you will find a copy on the Internet.

We have quite a few copies of the Yupiteru English or Japanese manual (assume the latter isn't of much interest).

I also wrote a "English" manual for the MVT-7100 back in 1993 which was a little more explanitory I hope. If you have access to HAMNET on Compuserve then there is a text file version in the library but it does not have the illustrations we also used.

Cross-posted to: rec.radio.scanner,alt.law-enforcement

I have having a dispute/argument with another person and would like to solicit your opinions.

Situation: Assume I have a two-way radio tuned to the local police department frequency. I witness an emergency situation (building on fire, person being shot, store being robbed) I assume, under current FCC regulations, I have the "right" to use that frequency, to report said crime, because it endangers "life or property."

Can anyone cite FCC regs? Is this technically permitted?

Dave McGuire

I cannot cite exactly where this rule is, but ham transceivers are easily
modified to transmit out-of-band, and the books I used to study say that it
is allowed to transmit anywhere (on any band) if it is an immediate
emergency.

I'll let someone else do the citing, but yes, I really did read this in
those books.

That scanner is not cell capable unless you completely replace the CPU. There is a company in the UK that sells the CPU....I'm sure you could find out by searching newsgroups through dejanews.

Dave,

A strict reading of the regs suggests you are correct. However, a ham was recently nearly prosecuted for using a law enforcement frequency to summon help for a hiker who was seriously injured from a fall on a mountain. The ham only escaped prosecution because he agreed to turn over his modified handheld radio to the authorities. Both local law enforcement and the FCC were involved.

There are many instances where hams have used modified
HT's to contact police on *their* frequencies. In most cases,
the ham's HT is almost always confiscated and he/she is
charged with violating the laws applicable to transmitting on
their freqs. After many hoops and dodges, the charges are
dropped and the HT is returned because the ham *really* didn't
violate any laws. However; it should be noted the one should
always try to use *legitimate* means first, and transmit on *their*
frequencies as a last resort - you may cause more harm than
good. Of course, with the new trunking systems, I'm not sure
it would do you any good now anyway.

Are you naturally stupid - or just a damned idiot? He didn't ask if the
frequency was "well monitored" but wanted to know if he could legally
use it, in an emergency situation.

He doesn't have a ticket? Although the frequency is licensed to a
particular police agency, THINGS CHANGE in emergency situations. A life
threatening emergency means JUST THAT!

> are you saying that the police are not monitoring there own freq. ?
>
> Don't think so.......

My god are you stupid! I believe he would be well *justified* in using
the frequency.

>460Mhz.

Also, when using older scanners, you may not be able to tune exactly to the desired frequency. The scanner has to be able to tune in 12.5 kHz increments in the 460 MHz band. Most of the early programmable scanners could not do that.

You know how the police are -- "my gun is bigger than your gun" type of
mentality.

They must be jealous of the ham, who should have received an award,
rather than a threat from authorities.

Makes you wonder where everyone's priorities are?

If I had to report an emergency on a police fx I'd just make the
transmission, then leave the area.

In the USA, it's a utility frequency (power companies, etc.). In
Canada, it's a public safety frequency. Northumberland County,
Ontario uses it as a fire dispatch repeater output.

One day I walked into the sheriff's dept. in my town and asked if I could get a copy of the frequencies, and one of the dispatchers said that it is against their policy and to buy the RS Police Call book. Later, I went in and asked to talk to the sheriff himself and only then did I finally get the sheet of freqs. What really pissed me off is that they gave it to me about a year ago no problem and this time they hassled me so much!

Chgo Park District Admin - 151.190 151.295 159.360

-Haven't heard much yet on 122.725, the former show discrete

-Show ops staff are using rental VHF radios from "Comm Direct". We couldn't find any likely subjects for frequency counter use (plus, the backround RF there is murder), but we found some show ops by searching, and at least some of these are in the rental radios. They have 7 channels configured for the show, many of the radios have 15 channels, but I suspect only the first seven (or in some cases two) are programmed. They are numbered one through seven and grouped like- security / hospitality / medical / show stand / etc. These appear to be the same radios as last year. We had the hospitality net on 154.965 (203.5 Hz PL Tone), haven't confirmed it yet. The other freqs were:

151.145
151.505

151.565
151.625
151.955
154.600

Communications Direct Inc is also licensed for rental radios on these UHF frequencies statewide. I haven't checked them yet for activity at the site, but all we saw appeared to be VHF.

461.1125 461.6875 462.1125 463.5625 463.8375

464.6375 464.8625 466.6875 467.1125 468.5625

468.8375 469.6375 469.8625

-Coast guard operations were on 157.050, 157.075 and 157.150. The cutter Mea (Sp?) Bay from Cleveland is here serving as show center. USCG was testing their data link on 157.075 this afternoon after the show. Sounds like ASCII, NBFM Mode. We did not find the USCG Rescue Helo demonstration, they may have been on UHF, I was getting bad intermod on 282.800 and couldn't listen for it there. Illinois State Conservation boat is also on post, check 151.250 and 151.445, though they be on the ISP trunked system by now. Heard the CPD Marine units talking boat to boat on the CPD trunked system.

-Citywide Six is event primary for the CPD, other will be in use, too.

-Also have not found the air to air channel for the AH-64 Apache Gunships (x2). Searched low band, high band and UHF, no luck so far. (Have Quick?)

-Heard some Hilltop MOA activity on 350.350, unknown if it was related.

-Marine band very busy, search 156.250 - 157.425, 25 Khz steps

-Only one A-10 today - so no air to air traffic. No B1 today.

Go to the show. Happy Scanning - Ted

I will be in Chicago in the near future and will be monitoring a bit of Chicago PD. I have the 13 zone frequencies, however I am wondering which zone covers the area surrounding Midway Airport.

Thanks for any information!

*** Ryan - PLEASE only answer this message if you REALLY know the answer! Thanks! ***

It's too cold-hearted to just stand by and watch someone in trouble.
If you're able to help someone in need but you fail to do so, you're
a coward.

I once chased a purse-snatcher 3/4 of a mile (down the Ala Wai Canal,
then onto Kalakaua Avenue into Waikiki) and cornered him; someone else
helped me to subdue the crook until HPD arrived. If I would have
had my HT with me I would have used it to whack the bad guy over
the head a few times.

hi,

would like to know if anyone knows what type of data format is used to
dispatch
cabs using GANDALF SYSTEMS CABMATE series mdt model#3602.
the system has been used by acab co in phila for 9yrs & has been in use
in ny,atlanta,san fran,st louis ect for several more years. someone said it
may be 4800baud fsk. also if there is software program to decode the data
to a pc using a icom 7100 2 level interface discrim tapped & optolinx
will pay top dollar for the program

thanks

If you have a HAM license it would probably be legal, but only if you do
not have immediate access to a phone at the time. If you had a wireless
phone at the time, you would be obligated to call 911 on that.

Is there a cable connecting it to the back panel?? The "thing" ajd
describes is the Icom CI-V interface which gets connected externally to
the CI-V box. U then run a DB25 cable to your com port on your computer.

You might look further @ the device & see if there are any part numers
on it. Then email Icom & see what they have to say.

Don

Has anyone tried to use TEN-TEC kit T-KIT No. 1050 Universal 455KHz BFO to receive SSB on the Radio Shack Pro 2006? The kit was designed to be used on SW receivers that are of the AM only type. The Pro 2006 has AM so I am lead to believe that it should work. Any comments would be appreciated. If it does work it would be a cheaper solution that having to use a SSB SW Receiver inline with the scanner to get SSB reception. Thanks to all who respond. Dennis

From: malexder@aol.com
Message-ID: <1998082211420400.HAA19250@ladder03.news.aol.com>
Source record: 146806

I found some more NFL-related freqs in my files. I've been collecting this stuff for quite a while, but I can't vouch for any of it.

463.4625 DPL Repeater San Diego Charger, QB headset
468.4625 DPL Input

464.4625 Repeater New England Patriots, QB headset
469.9375 DPL Input

461.6125 DPL Repeater Dallas Cowboys, QB headset
466.6125 DPL Input

461.3625 DPL Repeater Denver Broncos, QB headset

NFL Referee Wireless Mikes
174.400 Atlanta, Dallas
175.000 New Orleans
180.600 Chicago
183.000 Kansas City
184.000 Pittsburgh, Washington
184.400 Minneapolis, Seattle
185.400 San Francisco, Cleveland, Miami
187.800 San Diego
194.000 Indianapolis
195.800 Buffalo, Denver

Freqs to try for parabolic microphones

794.625
801.500
795.750
802.000
797.125
803.750
804.625
805.000
799.125
805.250
799.875

Goodyear Blimp
123.050 Airport/landing site
123.200
123.250
132.000 Goodyear Public Relations
151.620 Blimp and ground crew
167.5625 Remote to law enforcement

460.025
460.050 Goodyear aerospace net
462.225
465.025 Remote to law enforcement
465.9125 Operations/Sports event
465.9375
465.9625

I'd also suggest looking in whatever freq guides you have for stadium security, state police or whoever else does traffic control, wireless microphones and so on. As an example, I got these from ScannerBase:

154.540 Denver Broncos
154.570 Denver Broncos
462.8625 Mile High Stadium
467.8625 Mile High Stadium

Beyond Police Call might have some too (I no longer have a current copy to check).

If all else fails, ask John Mackey or his buddies Digital Personna or John Petri. I'm sure they will help you out.

Ref: FM radio...scanners.

The ICOM PCR1000 has both AM and FM frequency bands.

Of course, it is not a portable and must be attached to your
computer. But it is extremely wide-band. 1300mhz down to
below the BC band. A good unit!

That doesn't mean, however, that you're not going to have to explain how you came by this equipment that operates outside of your assigned licensed bandwidth and it won't save you if it can be shown that other communication means were available. Realistically, in an emergency, who's going to question the HAM operator doing a good deed? The problem occurs when someone thinks they can bypass conventional communications because they're a licensed HAM.

Steve

Folks,
DO NOT USED MODIFIED HAM GEAR ON LAW ENFORCEMENT SYSTEMS, PERIOD.
Do many of you know what "stunning" a radio is? Do you understand the implications of a "hot mic" on a police
system? Digital trunking systems will eventually make this "ham intrusion" issue a moot point but current
non-trunking commercial radios can be "stunned" if stolen or silenced (either remotely or by timeout) if
someone is sitting on the mic button. Can you imagine the panicked ham who consciously reports a crime and then
throws the HT into his truck with the PTT depressed and no timeout timer set or, worse yet, his mobile rig? How
many hams have heard their repeater tied up by this same cause? All it takes is for one ham in an area to
determine this radio access is permissible for a legit serious crime then the next ham determines that seeing
someone with a coat hanger near a car is "serious threat to life or property". See where this goes?
Unless you have specific permission (in writing) from the Sheriff or Chief (as is the case in some
parts of North Carolina for hams there), do not TX on LE frequencies. Today, you can't swing a dead cat without
hitting a cell phone user.

Look here, "cop", who says there's going to be a pay phone right
there? And like I'm really worried about losing my radio when many
hams/communications enthusiasts such as myself have more than one!
And who said anything about wanting to be a cop? All I'd be interested
in is helping someone out of a potentially life-threatening situation?
It seems like you're more interested in no one BUT the cops helping
people. What are you - afraid that a private citizen gets credit for
something the cops weren't there for? You've got shit for brains,
"cop." This high and mighty attitude taken by you and some of your
"cop" compadres is BS. You aren't better than us. Many "cops" don't
even know what freqs they use - they just turn on the radio, push the
button, and talk. So bite me.

If you fo to the FCC Database web pageand look up microwave towers in your area you will usually find that they ahve licsences for most of the frequencies that you hear data on in your area.

Did it ever occur to you that some Police Officers are licensed Amateur
operators also?
Grouping disparate people who perform a similar job function into a stereotype
to fit your personal agenda isn't realistic, Radioboy.

If you ever cast off your prejudices and grow up a mite, you could even call
yourself 'RadioMan' <g>.

And yes, I am a career law enforcement Officer, as well as an Amateur...KC5JLA.

This is for "COP" and others on his side:

Imagine your wife gets brutally raped and murdered.. The love of your life, mother of your children. And I happen to witness this from afar, say from a wheelchair which i have been confined to for a few months. And i happen to have with me at the time a police band 2-way (the only means of communication i happened to have at that time, for the sake of arguemnet), but don't use it because "i may get in trouble." Well, the police later catch the maniac who did this, based on my descriptions of him. Yay, we're all happy - we've brought the criminal to justice. But it is revealed throughout the course of the trial that I had this police 2-way radio and didn't use it to help bring assistance. Wouldn't you be just a TEENY LITTLE BIT P.O'D ?????? Or would you say to me, "Thank you for not breaking the law and transmitting on my precious frequencies." Sorry, "cop", I love my wife way too much to let someone else's wife be killed. Gimme a friggin' break.

Big Bad Berticus proudly sends...

If you called the cops on your Icom U-16 to save my mother/wife/sister from being raped at gunpoint, and had your radio confiscated, I'd buy you a new one, as well as the finest dinner in town.

Some Departments are damned peculiar about they way they accept help from civilians, and that is a shame. Some cops, too, make some damned poor decisions, but then, as long as we're human, we're prone to making human errors, too.

>If you want to be a Police Officer why don't you go through the
>training and become one. Don't be a wannabee.......

That's a foolish thing to say. Some people can't afford the time off to become Certified law enforcement Officers, and many people can't pass the tests...psychological and physical...that certification academies stipulate. This doesn't make them bad people, or less worthy of our services.

We have a man in his 30's right now, a former Army CID Investigator, married, stable, has a Master's Degree in Criminal Justice. He is probably going to be terminated because he was a few seconds slow on his pre-Academy timed 1.5-mile run. He was competing against kids fresh out of high school, by the way...all slots in the Academy are competetive.

And, you mentioned a few posts back that you were a Reserve Deputy Sheriff. Why don't YOU go full-time and try to make it on a full-timer's pay, before you chastise others?

I've been a full-time street cop since 1975, BTW, in case you're interested, and some of the Reserve guys are tops, so don't take this as an indictment of all Reserve folks.

>(3) Cops are extremely protective of their radio traffic. They're not
>fond of you listening (though they know they can't do a damned thing
>about it)

Most of the cops I know and work with assume that our conversations are monitored, by the news media, our own family members, bored housewives, people confined to nursing homes, internal affairs agents, other departments' cops, etc., and we couldn't care less.

We might bring a smile every now and then, and occasionally someone monitoring us gives us a hand when we need it.

A free society is far better than a secret police state.

It seems, to me, that most of the responses that say "...if a loved one was being killed, i would..." and because of that situation it makes it okay to do something illegal. This is the classic "The end justifies the means" thinking. This will always lead to anarchy. When a society decides that laws are not important and only what makes sense to them is the basis for how they act, then the end is near. Anyone can take this arguement to justify any action, even murder. If people were able to "police" themselves then we would not need the Police. Second major point to remember, when you start allowing "the end to justify the means" you are also letting anybody do anything they want to you. You can not say "Hey, that's illegal, you can't do that" anymore since they already know it's wrong. Their "ends" over ride your "rights"

No there is currently nothing you can obtain to "decrypt" these comm's.

It is just the high tech way of keeping the tax paying public in the dark. What you don't know is what you need not to know. Some secure comm's I understand. But everything
totally unobtainable really bothers me...Like they really want to hide something from you.

But thats today's grossly overpriced technology. Complexed,bug ridden and over kill.

While coming home from work one evening I came across a shooting in progress ! I grabbed my cell phone and called the local police department (Jersey City N.J) and the phone rang over 19 times ! I finally had to call the next town over for help . IF I had a radio with me I WOULD HAVE used it ! AND I AM A POLICE OFFICER ! I took 3 rounds of fire from those scumbags and I was very lucky ! If your life , or someone else's life depends on it , ... do it ! Better to be tryed by 12 than carried by 6 ! Tom Rowan .... North Bergen N.J P.D

hello

i have been looking into purchasing a handheld scanner for a couple of months now, but am a bit confused about what step sizes i will need. i hear of this 8.33khz step size, but mainly in the UK newsgroup. will i be limited by a handheld such as an mvt 7100 or aor 8000 if it doesnt have the proper step size? it seems that neither of these have the 8.33khz step but the mvt 9000 and aor 8200 do --- both a bit to rich for my blood. any ideas or comments? thanks.

Source record: 146845

For those interested, I looked up the Oakland Raiders from the FCC Web site and found the Raiders have 3 frequencies:

WPKY684
464.500 MHz
469.500 MHz
469.550 MHz

They have licensed 10 radios on each frequency transmitting up to 5 watts. No transmitter location listed, so I assume it is mobile or HT radios only. I'll scan these frequencies Monday night at the Tampa Bay game. Usually when I see a frequency at 464 and another exactly 5 MHz higher (464.500 and 469.500) the higher frequency is the input frequency on a repeater. I don't think it is a law, but that is how I general see it used. Maybe they have a full-duplex radio or something.

Nope, Phil has asked you to contain your flaming to this particular group instead of escalating it. He's already conceded that you are not going to stop causing trouble. All he is asking is that you don't cause as much trouble elsewhere.

You should be ashamed of yourself! Please stop causing trouble and disrupting this newsgroup with off-topic posts. The trouble has nearly died down now that you have fewer people to attack. If you would only follow the example of everyone else, this could be a useful and prodcutive group, don't you agree?

3299. Re: Bearcat 101 Help

I currently own both a BC-3000XLT handheld and a BC-9000XLT base
scanner. I've had no problems with either.

Later,

Andrew

3310. Re: Foreign scanners????

Newsgroup: rec.radio.scanner

Does anyone know what they are looking for specifically? I'm guessing that they check the model number against a prohibitited list. But if they don't check a list but just turn on the scanner and try to enter an "illegal" frequency, couldn't you have a bandplan excluding those frequencies loaded into the scanner before it's mailed? Just curious...

Jay

AOR AR - 1000XLT (display off by 4.9mhz) no gaps, 1000 channels -->$325.00

RS PRO-64 with leather case, 400 channels (new) -->$150.00

RS TRC - 485 SSB/CB 40 channels (new) -->$150.00

AMD K-6-233 processor (new) -->$125.00

(4) 8-MB EDO SIMMS -->$100.00

Aiwa (Walkman style) CD player, 40-sec antiskip -->$175.00

All the above items work perfectly, I just need to sell !!!

If you think I'm too high, Make me an offer at altman@ctel.net

3312. Re: Scanners bought from CEI

Newsgroup: rec.radio.scanner
Date: 1998-08-22 00:00:00 UTC
From: Ken Ascher WB8LIT <cei@mediaone.net>
Message-ID: <35DF8139.B4997810@mediaone.net>
Source record: 146872
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Thanks for buying your Bearcat 235XLT from Communications Electronics, Emergency Operations Center. We guarantee you'll be happy with our product or simply return it to us, freight prepaid in new condition for a refund within 61 days from our date of shipping. Since you said you purchased your Bearcat 235XLT for $199.95, provided everything is in like new condition when returned such as the AC adapter, antenna, operating manuals, etc. CEI will issue a credit for $199.95. As the Bearcat 235XLT scanners sold by CEI are currently at $269.95 less $100.00 in rebates or special savings, your replacement cost is $169.95 plus shipping/handling/insurance. This means you should get money back, a new updated model scanner and a new one-year factory limited warranty. CEI does not require you to call in for a return material authorization, also known as an RMA. We do insist however that the entire unit and all the accessories packaged with your scanner are returned. We are unable to take back scanners that have scratches, missing accessories, names engraved in the scanner, etc. and issue full purchase price credit. If you're missing a part such as the owners manual, simply tell us when you do the return and the replacement cost for that item will be deducted from your credit.

Scanners returned to CEI must be "like-new" as it will be going back to Uniden. After a quality control inspection, your "like-new" scanner will be resold in the Uniden internet store. This is how CEI "recycles" returned scanners. People interested in buying scanners on a budget should shop the Uniden internet store at http://www.uniden.com. Please remember that items purchased in the Uniden store have a reduced 90 day limited factory warranty and not the one-year limited factory warranty found on new Bearcat scanner product purchased through CEI or our CEI dealers.

I recommend Mark, you take advantage of our 61 day customer satisfaction guarantee policy. This policy is one of many exclusive CEI customer benefits listed in our web site at http://www.usascan.com in the customer benefits section. Our policy gives you the opportunity to update your scanner with some of the latest technology such as the new attenuator feature, restart your one-year limited factory warranty and even get you cash back. This CEI policy and others were created from our customer feedback and customer focus groups over the last 30 years. It helps to protect your investment for years to come. It's easy to return your product to us. To minimize possibility of loss, we suggest you ship the product to us in the original packaging, prepay shipping charges, and insure the shipment. Please understand that we cannot be responsible for loss or damage during shipment. Returned products must be in like-new

condition, complete with all manuals, parts, and accessories as sold originally. Include the original copy of your invoice and the reason for the return.

By the way, the CEI 61 day 100% satisfaction guarantee policy is a separate benefit from the CEI price protection policy. The CEI price protection policy helps save you money because during the first 14 days after your purchase, if the price decreases by over $10.00 you are entitled to a refund less a $10.00 administrative service fee. This means if on January 1st you bought a scanner for $300.00 and on January 13th, CEI lowered the price $30.00 to $270.00, you would be eligible for a $30.00 refund less processing charge. Of course, if the price went up, we do not bill you extra. In some cases (although it's rare) some radio equipment appreciated in value when a manufacturer raised their prices. The Icom R9000 communications receiver is a radio that appears to have increased in value.

Regarding your questions on quality control concerns, when new products are received, our logistics coordinator checks to see if certain CEI quality control requirements are met. For example, all scanners must have a scannable UPC code (zebra bar code) on the merchandise. The country or origin must be correct. Power supplies must be UL and CSA listed for product safety. Operating instructions and safety warnings must be in English and sometimes other languages. An inspection is made to see if the operating instructions correspond to the software and firmware revisions of the microprocessor in the scanner. Another inspection is made to see if the frequency coverage is correct for the country the product is being distributed in and the FCC ID number is affixed to the product.

Recently, when Uniden updated the Bearcat 235XLT scanner with the new RF attenuation feature, our quality control staff noticed this new feature was included but there was no corresponding update in the enclosed operating guide. This RF attenuator update to the Bearcat 235XLT can be found our web site at http://www.usascan.com. In addition we had Uniden create a special addendum regarding this feature. This addendum was added to the Bearcat 235XLT operating guides distributed by CEI. If you are a Uniden dealer and need the Bearcat 235XLT addendum, please e-mail me at cei@mediaone.net with your dealer name, address and phone number. Out of the hundreds of trunk tracker scanner we recently returned to Uniden, over 96% of the scanners worked correctly. Customers simply did not read the owners manual and programmed the scanner incorrectly. For example in some scanners returned to Uniden, customers locked out all the channels and returned the scanner to us claiming it would not scan. They did not call Uniden or us. The customer simply could not grasp how to program the scanner. Returns for truly defective products are normally an extremely low

percentage in comparison to the total number of scanners we distribute. Remember, because of CEI's very liberal return policy, we receive scanners back simply because customers want to update their technology.

About a year ago, we noticed a higher than normal quality control issue regarding the center pin of the antenna breaking on the Bearcat 235XLT. We corrected this issue by having Uniden change the specification on the antennas we received at CEI. I can not find any reports of the scanner constantly picking up the data channel. I recommend you call Uniden at 1-800-297-1023 regarding this issue. Ask for a level three technician.

We appreciate our customers being very frank with us regarding their likes and dislikes of the products they own. We share your every comment with the manufacturers so they may improve their products. Thanks in advance for your help.

We know millions of customers enjoy their Bearcat scanners everyday. As a Uniden Master Distributor, it is our responsibility to help you get the Uniden products you need, when you need it. We think our Uniden Bearcat products offer our customers an excellent value.

It has been such a pleasure serving you that, on behalf of CEI, I just wanted to say thanks. We know that you will enjoy using your Bearcat 235XLT from CEI.

Scanner World USA (http://www.scannerworld.com) stocks the battery pack for the BC3000XLT; last time I looked they were advertising it at $52.99 each. Several people have posted other sites for getting replacement cells to install in your existing battery pack.

Later,

Andrew

This will be the new airband step size which will slowly be phased
into use over 6 or 7 initial European countries. Word is that even
the FAA here in the US is considering it.

> will i be limited by a handheld such as an mvt 7100 or aor 8000 if it
> doesnt have the proper step size?

Not if it can do 1kHz steps. You'll be able to tune more than close
enough to the "real" frequency to receive the audio.

> it seems that neither of these have the 8.33khz step but the mvt 9000 and aor 8200 do ---
both a bit to rich for my blood.

The AR8200 is the only hobbyist receiver at this time with the
8.33 steps. But any receiver with 1Khz will get what you want
as far as tuning. You won't be able to do a proper search but
you'll have to decide personally if that's a restriction you
can live with.

It sounds like an RS232 interface and possibly includes some sort of
A/D convertor. Any other parts? BURR/BROWN chip? Why don't you post a
jpeg of it showing the chips? Where did you get the receiver, Govt
auction?? What kind of external plugs on the radio?

You must have an Amateur Radio License, or a reporter.

Here is the law, note section (3)

State of Florida Scanner LawFlorida Statutes (1995)Title 46, CRIMES
Ch. 843, OBSTRUCTING JUSTICE§ 843.16
843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by munincipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal Communications Commission or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central MonitoringSystem.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

A no-code tecnician license would suffice. It is very easy to obtain, requires a minimal study period, and thus, no reason not to get one!

cheers

843.16 Unlawful to install radio equipment using assigned frequency
of state or law
enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor
vehicle or business establishment,
except an emergency vehicle or crime watch vehicle as herein defined
or a place established by
municipal, county, state, or federal authority for governmental
purposes, any frequency
modulation radio receiving equipment so adjusted or tuned as to
receive messages or signals on
frequencies assigned by the Federal Communications Commission to
police or law enforcement
officers of any city or county of the state or to the state or any of
its agencies. Provided, nothing
herein shall be construed to affect any radio station licensed by the
Federal Communications
System or to affect any recognized newspaper or news publication
engaged in covering the news
on a full-time basis or any alarm system contractor certified pursuant
to part II of chapter 489,
operating a central monitoring system.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

Since most of the state's police forces are on 800mhz you could
interpret this to mean that a unit without 800mhz coverage in your car
might be legal...but the government has freq's licensed in every band
anyway...I guess it would depend who's lawyer was smarter!
If you notice amateur licensee holders are exempt..so if you want one
in your car go to RS and pick up that book "Now you're talking" or
something like that, then read it and goto:
http://www.arrl.org/arrlvec/examsearch.phtml
for a place close to you and within a month or so you'll be completely
legal most everywhere in the country for a scanner in your car!

No. That is NOT how it works. You must be confused with "Interservice
Sharing," a policy that allows any open radio channel to be used for
things it normally wasn't assigned for, like a police department
getting a license to operate on a vacant fire channel.

Looking at the Communications Act of 1934, its amendments and various
parts of Title 49 CFR, in an emergency, rules and regulations are
"suspended" so that help can be contacted under extraordinary
circumstances. These rules and regulations supersede any local
ordinances or state laws regarding radio usage in their area. The
intent goes back to the days of "Wireless" transmitters on ships to
ensure that help could be contacted on frequencies where normal
operation was not allowed and remains intact today.

That doesn't mean that it's a good idea to come up on anyone's radio
frequency ***unless you are sure you or someone else will certainly
die unless you make contact RIGHT NOW and DAMN the consequences!*** If
you do so, expect varied responses from individual agencies, but don't
expect any of them to be happy or understanding that you have the
capability of going on their system or for that matter, you even know
what frequency they're on!

Always try 146.52 or your local ham repeaters FIRST!!!

The Commission still has some of the best direction finding apparatus
out there and has not abdicated any authority to state or local
entities to ensure compliance with the R&Rs, but local jurisdictions
should be aware that Congress has changed the mission of the
Commission to more of a revenue producer by selling frequency
exclusivity than an enforcement body. In fact, Commission Engineers
are *not* law enforcement officers and rely on the U.S. Marshall
Service to perform their compliance enforcement functions after they
gather the technical evidence. In other words, be prepared to
"police" your own system because the Commission does not respond red
lights and sirens to interference calls.

The purchase of a Doppler type direction finder, like LoJack on your simplex and input radio frequencies (and training with it) is always a good investment for your department.

>> It was always my understanding that the FCC has regulations regarding public
>> safety assigned frequencies and transmitting over police radios, that over
>> ride any other regulation. I may be wrong, but my department has charged and
>> received convictions on several occassions when someone transmitted over the
>> radio. If it was a false transmission or not an absolute emergency they
>> usually would charge under the criminal code. If it was an absolute emergency,
>> they always confiscated the radio and let the FCC handle it from there. Now
>> under what rules, I don't know but I've seen it happen.

Usually under non-type accepted equipment. Modifying a ham radio TRANSMITTER (there is no similar requirement about frequency ranges of RECEIVERS!) to go "out of band" for anything but Civil Air Patrol (CAP) and Military Affiliate Radio System (MARS) and then transmitting there is a violation because the equipment has not been "type accepted" to transmit there. That's justifiable for confiscation, but if there is a CAP license or MARS license, the modification is LEGAL! Usually there is no other "equipment related" charge associated with the operation.

Using the radio in a non-life threatening manner or deliberately interfering with an emergency radio system might be interpreted as obstructing or interfering with a firefighter or police officer in the commission of their duty. That's something that can be done without the Commission's involvement if you can direction-find and catch the radio. There are also charges the Commission could bring in the Communications Act and 47 CFR.

With the Commission involved, the actor could receive a "Notice of Apparent Liability" from the Commission for posessing a non-type-accepted transmitter and also be criminally charged locally for interfering and get the R&R violation.

>... is accused of stealing two 800-megahertz
>radios typically used by area firefighters and police to dispatch
>officials to emergency scenes

Go into the 800 MHz system manager terminal and "KILL" the radios. They'll turn up in the back of someone's locker because they'll be useless and won't work (can't even be used to listen).

No need to make it a media event.

Oh well.

Hi Rich,

It's natural to compare the shortwave performance
of handheld scanners with existing shortwave receivers.

The manufacturers' advertisements for
handheld, wideband scanners invite comparison. Consumers who
are going to spend more money on a scanner because
it tunes shortwave and has SSB/CW product
detectors want to know how well the extra cost circuitry performs.

Unfortunately, I haven't yet tested a handheld ICOM, AOR,
or Alinco scanner with shortwave performance to match an old
Sony 2010 or Magnavox D2935 with the standard whip antenna.

Does this scanner show you what the PL tones are, or do you have to know them and program them in yourself. I saw where the BC895XLT can read the tones, but you've got to have a pretty long transmission to give the scanner enough time to cycle through all the tones. I was hoping that this radio, or another model, may be able to read the tones without having to cycle through them all.

It's digital encryption, probably DVP if used in a Motorola system. YOu
can't decode the signal. You'd be better off buying one of their radios
and stealing their keyloader for about 30 seconds....just long enough for
you to load the key into your radio. Then, hope like hell that they don't
change the key very often.

Dave,

Not sure if it's bullshit or not, but I read somewhere that the record option was a typo in the manual, along with 3 or 4 other things that it says it can do, but really can't. I'd check out the review that is on the one scanner review page that I think is run by some guy named Wells, or something like that. He talked about it there, I believe. Sorry, I can't find the URL for his page right now.

Those are the monthly SALE catalogs; I don't think they've ever mailed out the
"big" catalogs.

Don't worry; Sammy Salesdroid will still demand your name and address everytime
you buy a 9-volt battery and you'll still get their junk mail every month.

Hello All ,

Deti , the maker of this softeware has seen fit to change his mind
about making it freeware. He gave this program away for a long
time stating that it was freeware , without any reservations.
Then "WITHOUT WARNING" he published a new version that 1.
was no longer 'FREEWARE " (the current version) and 2. killed
the freeware versions that you already had. So instead of getting an
upgrade , you got ripped instead. If you install this software where
you already have the "pay " version , it wont work . "AND" if you try
out the pay version and decide thats its not worth the extra ,
you can't go back to your old " so called " freeware.
I , for one do not like this type of business practice. I consider it
" offensive " to be given something then have the same person
" steal " it back. To make the freeware version work once again,
just remove ALL references to poc32 in the registry with REGEDIT.
Then reinstall the "FREEWARE " . Like the pay version better ..???
Then go to http://warezslutz.com/crckspage/new/wpcrackz.htm
and get the " crack " for the current version .. " fairs fair " and
" what goes around comes around "

The spacing might be a little different, but by tuning to the next nearest frequency you should be able to hear just fine. The default mode (am, fm or wfm) might be different, but you can change this manually on the Pro-26. You should be able to hear everything with the European version as you can with the US version at the sacrifice of some conveniences.

Bruce K wrote:

> Yes it can be cell modified,although I personally don't know how.BTW I
> have a modified one on Ebay right now.The other "fantasy"is just that
> unfortunately.

You just tear the thing apart. There are lots of little screws. Then you desolder the bnc connector. then you desolder a ground strap. Then you unscrew an inner top board. Carefully pull it off of the bottom board. Then there is a diode there on the left... you just clip it. Actually there are three diodes there on the left... I cant remember which one it is. I think it was the bottom one labeled D34, but my memory may not serve me correct. These instructions certainly are not enough to reeally do it- you need to confirm which diode is the right one.

By the way, listening to cell is illegal (stupid law) and I don't condone it. Besides... more importantly- It's a fair bit of work to work to get in there and mod the thing just to listen to something you will get bored with rather quickly.

In my opinion, the Pro 34 is a fantastic scanner.

You need to read Florida statute 843.16, You can find this at
www.leg.state.fl.us, if you have no luck let me know and I will forward a copy
to you.

> County (Virginia) General District Court, Traffic Division, ruled that
> radar detectors equipped with the Safety Warning System are not subject
> to Virginia's long-standing detector ban.

This is a non-precedent court. It is the lowest level court in the
Commonwealth of Virginia and the judge's ruling has no widespread
effect.

>
> The Safety Warning System (SWS) uses technology similar to that found
> in motion detectors, automatic door openers and radar detectors to alert
> motorists about to encounter abnormal driving situations.
>

There are devices on the market which allow a motorist to see the Safety
Warning Messages but DO NOT react to a police radar signal. Under
Virginia law, these would automatically be allowed.
> broadcasts. At no time during the course of the hearing did the
> Commonwealth of Virginia contradict this evidence.

They probably had a prosecutor who was not familiar with the technical
side of the argument and probably should have had an expert witness on
the stand to present rebuttal.

> Legislation is pending in the Virginia General Assembly to repeal the
> state's radar detector ban. If passed, Virginia motorists will join
>
Not at this time. There was some legislation pending which banned these
so called "radar jammers". This legislation was tied to the repeal of
the radar detector ban. That legislation was withdrawn and apparently
resubmitted. Radar detectors are still illegal in Virginia and now any
type of radar jamming device is also.

He should then get more current on the rules. The FCC has ruled,
that the line about using any frequency at your disposal means any HAM
frequency. Anything in part 97. IE a Novice can use a Generals
frequency.

Here in Michigan, you must be a Technician or higher license class. And that does not mean that the officer has even heard of the law. There has been several cases where radios have been confiscated and lawsuits had to be brought up in order to get the radios back. Be aware that law enforcement officers do not like the fact that the average citizen has radio equipment that can receive their communications. I took a copy of the Michigan Motor Vehicle Code that lets Amateurs have radios that receive police frequencies to the State Police District Headquarters in Paw Paw Michigan and they told me it did not matter to them. If they see the radio they would take it. Be warned. Good luck. Dennis KB8SOJ

3365. Pro-Turbo Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35e31b40.2727325@news.iaw.on.ca>
Source record: 146683

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Do I sense sarcasm in this post? This person sounds a little paranoid...god knows they might next be suspecting that the government doesn't really take it's direction from the wants and needs of the average person and is only concerned with the large corporations that are owned and or controlled by a small minority of the country.

Next they'll be saying there's something inherently immoral for the CEO's and exec's of a corporation to be giving themselves multi million dollar bonuses while laying off hundreds if not thousands of workers even thought the company made profits if not record profits, but fell short of their projected numbers.

They're probably enough of a socialist to think that there's something wrong with a system that manages to get 80% of all the income to just 5% of the population leaving the remaining 95% to scramble for the remains. They're probably enough of a liberal fag commie to think that if you just distributed some of that money into training and creating decent jobs for the jobless this would relieve some of our problems.

They might be absolutely insane enough to think that those jobs could be created by cutting 10 or more hours off of the existing work weeks of people who already have jobs with out lowering their pay and letting them go home and be with their families.

It sickens me when I see such rhetoric. It sickens me that this person just won't accept what is and has always been. They actually have the temerity to want to change this. It sickens me to think that this kind of person would actually want to put the blame on the greed of the leaders of this country and a system that keeps people so over worked that they don't have time and energy to get involved in changing it. They won't put the blame on the real problem... the Jews, Fags, welfare mothers and god damned foreigners. Oh yeah...and feminists.

If you don't like it here why don't you go somewhere else.

Peace

Roy ;)

3370. Re: Help Please With MDT, Winradio & MFJ1213

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: cpz6hymg@my-dejanews.com
Message-ID: <6rpf47$9au$1@nnrp1.dejanews.com>
Source record: 146688

Thanks for your help Jack...Also, If anyone else has suggestions, please advise.

I tried your suggestions and found that the interface does work with the pager program and also the "hamcomm" software (though the messages are often unreadable). However, I still cannot get my setup to display MDTs, even using the newer MDT software from your site. Since the default for the pager software uses CTS (I'm assuming), I have set the MDT software for CTS, although I also tested DSR and DCD modes with and without inversion. Since I am using a Winradio, maybe there is someone else who has experience using this software with it? The other switches in the MDT software are TRACKSCANPORT, TRACKSCAN and TRACKBAUDSCAN, all of which I've tested, even though I do not know what exactly they do or what the correct settings are.

Thanks for any advice,

-David

Jay,

I would like add to your list:

I wish the buttons could be turned off!

I put the radio in my pocket and something hits a button and I have to
take the radio out of my pocket and press "scan" again. Drag!!

Tim

I've lived in Florida and now in Georgia and have NEVER been hassled by any law enforcement agency. Mainly because I don't flaunt it in front of them. If you don't say anything about your scanner to the officer, 99.9% of them won't say anything to you about it. Just use common sense and don't put on a show and everything will be fine.

Most Rat Shack scanners used (F-10.7) / 3 for VHF Hi Band and (F-10.7) / 9 for UHF, as best as I can remember. Hope this helps.

Mike is absoulutely correct. Ive had mobile mounted scanning equipment for several years, and was only questioned once.. In Alachua County/Gainsville Area.

If your going to have a permananly mounted scanner in your vehicle here in Florida, its always a good idea to have a copy of the Florida Statute concerning this, as well as your ham ticket..

www.afn.org/~afn09444/scanner
has copies of the statute avalable for view

<35DFC73D.689C@ix.netcom.com>...
>> 3. As for anyone using a police radio's, all states have some form
of laws
>> that makes it a violation, but, he also says they have exceptions.
Such
>> exceptions are: if directed by a police officer or if the officer
is
>> incapacitated. This means (to answer one post) if you come across
an officer
>> that is down and you use the radio to call for help, it's not a
violation to do
>> so.

Because all of this is so jurisdiction dependent, the whole debate really makes no sense. People keep saying, "Use a cellphone." What if you're in some part of the country (the vast majority of the U.S. land mass as of this time) where there is NO CELLULAR SERVICE? What good does that advice do you then? In sparsely populated areas, there aren't many hams on VHF or above, no repeaters, etc. Maybe you could call another ham three states away on your 40 meter mobile in that case, but is it practical?

Again, if you just carry around a modified ham radio or a regular commercial radio that can transmit where you're not licensed, you run a grave risk of mistakenly declaring an "emergency" and using your fancy toy when the need really is not there. There is no legitimate reason to carry a transceiver, except in areas where you have an interest in monitoring local activity and they use communication systems that aren't yet available on commercial scanners. If the only way to hear digitally transmitted (not encrypted) public safety traffic is to have a radio like they're using, then there's nothing wrong with buying one if you can afford it. But you shouldn't be looking for an excuse to talk on it!

If you can afford a fancy two-way, you can afford a more conventional and lawful means of summoning help. As long as the police aren't the only occupants of any radio spectrum where you happen to be, there should be no justification for using their frequencies. And most of the U.S. is equipped with pay phones.

>> 5. The reason police departments can confiscate radios used to
transmit on a
>> police frequency is because "It's probably been modified and thus

is illegal,
>> or if it's a standard UHF that can be programmed, they don't have
the right to
>> transmit on police freqencies"

If the police confiscate a radio just because it doesn't meet FCC specifications, they are acting beyond their authority. They should refer such matters to the FCC and/or DOJ for enforcement. Those agencies have jurisdiction over radio regulations; the local cops don't.

>Don't misunderstand what my opinion is: I don't think people should
>carry two-way radios and go out on "crime patrol" to report
suspicious
>activity to their local police, but there are, at times, situations
>where someone with a radio could SAVE A LIFE.

Exactly right. The "proper" definition of such a situation depends totally on where you are and what resources are available to you AT THAT MOMENT. If you PLAN to use a police radio to report any emergency you happen to feel justifies it, NO SITUATION will in fact justify such a transmission because you will not have taken the reasonable precaution (reasonable because you are planning in advance anyway) to provide yourself with suitable lawful means of reporting emergencies.

>Being a "late-nighter" I've run into some very unusual situations
where
>I felt the police should be notified. I used a cell phone.
>
>But, if I had a two way radio, and saw a rape, armed robbery, or
>shooting in progress, I would use that radio to summon help. If my

If you also had the cell phone with you, the officer could legitimately ask why you were unable to reach 9-1-1 on it. If he can pick it up and place a call to 9-1-1 on it himself, you're busted.

>Could you see the look on the Jury's face? "This man used a radio to
>save a life and now we must prosecute him."

Now you're getting into the concept of "jury nullification". You'd better hope the members of your jury are informed enough to know that they can judge the law as well as the offense. They are not likely to be instructed of that right by the judge, and he/she will probably block any attempt by your attorney to even mention it to them. The jury will be told not to use "common sense" but strictly the facts of the case and the words of whatever statute is being enforced against you. If they're like most jurors, they will do exactly that and convict you.

>able to hit a Ham repeater, but be able to hit a Police repeater.
Even
>MORE suspicious would be someone claiming to NOT know the tones for
the
>local Ham repeater, but knowing the Police tone.

Why? I'm a ham operator, but I know a lot more about public safety communications systems around my state than most people who are "professional" public safety personnel. I don't spend much time on the air on the ham bands. Who wants to listen to blow-by-blow descriptions of driving home from work anyway? I'd have to spend time searching for a ham repeater, then maybe I'd be able to get in if I either luckily hit the right PL tone or the repeater was carrier squelched. Or I could pull a local emergency service frequency and PL tone from my head.

What people know well depends on their interests and hobbies and available time, and does not create blanket justification for being suspicious of them.

That being said, I agree with the folks in this debate who advocate being prepared to use normal, lawful means to contact authorities in an emergency rather than trying to get illegal transmit capability "in case of a REAL emergency." Like the saying goes, "When all you have is a hammer, everything starts to look like a nail." People who wander around with modified transmitters end up just looking for some excuse to make that "emergency" transmission on a frequency where they have no business talking.

Oh, and now you're an FCC Commissioner or Administrative Law Judge,
too?

As a cop, you should know that interpretation of the law belongs to
those duly constituted authorities with the judicial power to
interpret, and not to street cops. Also, the law consists of more
than black-letter statutes, and previous precedential interpretations
are as much a part of the law as the statute itself.

If the FCC has already interpreted 97.403 differently from what you
say
it means, in short, you're wrong.

Go do some legal research before spouting your own personal
interpretations of the law. I would hope that your on-duty
enforcement of your jurisdiction's penal codes is somewhat better
informed.

> save a life and now we must prosecute him."

Well expressed; interpretation of "dire emergency" is always going to be contested. An individual's own interpretation of "dire emergency" will have to face the test of the court in determining consistency with the spirit of the regulation. The entire situation must be evaluated to determine if the unlicensed transmitter's situation actually did justify use of those frequencies. And the reason you have to assess compliance with the "spirit of the regulation" is because the regulatory standard itself is ambiguous.

Regulatory agencies usually try to steer clear of ambiguous language. But in this particular case, the extensive arguments surrounding interpretations of "dire emergency" are well worth the benefits provided by allowing a citizen to summon help in cases of imminent mortal danger, using whatever means available.

Heck, I wouldn't mind paying the $3 for a catalog if that's what it takes. What I do mind is when you ask one of the droids to check their computer to see if a particular product is available in the area and they act like it more trouble than launching a space shuttle.

I went into a large electronics store the other day and they offered to sell me a catalog for one cent. Don't ask me why they want people to even pay for it at that price, but heck, at least they want to make it easy for you to buy from them.

Several have e-mailed me for Ontario emergency services freq's. I have most of my stuff on computer but not all and it will be awhile before it is ready.

Let me recomend a new but really goo scanner guide that covers all of Ontario and has all the new trunk tracker ID's, it is called the Ontario Scanner guide by Jim Garnett. It is available in Toronto at Atlantic ham radio 368 Wilson ave. north side of Wilson just west of Bathurst St. Phone 416-636-3636.

Queensway CB in Brampton also carries it.

O

> Does anyone have information on any emerg services systems in Windsor
> and area.

A good source of Ontario frequency information is the Ontario Scanner guide by Jim Garnett. Itis available at Atlantic ham radio on Wilson av. in Toronto just west of Bathurst st. on the North side. phone 416-636-3636 or radiocommication in the yellow pages.

This book has most of the trunk tracker ID;s that you will want for every Emergency service in the province of Ontairo.

It currently is the most accurate book of freq's published in Ontario and has far more info than Ontscan. Although Ontscan has a nice format it is a little short on real accurate information, especially in the regions.

I also have some info on file if you absolutly can't get to Toronto.

Hey all,

Guess my other message didn't make it - oh well - I'll try again.

There's a new scanner oriented database on zdnet (http:\\www.zdnet.com) that I downloaded the other day and thought you guys should know about it.

It's called NKS Radio Scanner Database (just do a search for NKS) and this thing is awesome! SIX different search routines, Trunk Tracker group id listings, full database view, print, etc. No, I don't work for em, but I sure do like the program and thought you might too - check it out.

It's brand new I guess, only been there a couple days - be the first on your block to get a copy :))))

Take it easy -

BarryS.

So, I take it then, that my offer to have an on topic conversation with you has fallen on deaf ears?

You did read my whole post didn't you? Yes, of course you did, you would have had to in order to snip the part about us talking about scanning, sans flames. I don't see how you can consider that message "stirring it up again" when I went OUT OF MY WAY TO BE NICE TO YOU!!!! I called you no names, used no foul language, and even offered to have a friendly conversation with you. Yet this is how you respond.

I must confess that I figured as much (as did others, by the way). Too bad, but there's a reason that I did it. Hopefully the public now stands better informed of your intentions, and mine.

Just try not to crosspost in a.r.s. unless it's about scanning, OK? Thanks. It's much appreciated.

-Phil

You might look for where the electrical wiring goes through the firewall.
There is usually a large rubber grommet and I often am able to poke a hole
(Very Carefully so as not to damage any wiring!) through the edge of the
grommet and stuff a couple # 14 wires through that can go to the battery. Be
sure to fuse at the battery.

A; The governement would like to control all aspects of the media and
communications in this country and world if possible...only letting
the "desirable" through.

B: They love people who contimplait their navels while the tanks roll
by and their rights fly out the window.

A post of a political nature was put up on this news group...a very
appropriate post since it could affect a "hobby" we all enjoy...it is
a hobby you know. Now the political nature of the post is not a
hobby...it is a life and death type of situation. It affects
everyone...not just scanning enthusiasts and it started a thread. I
responded in nature to the the part of the thread that was important
to me. (there were no questions on Bearcat 839xlt's or Rehlm HS200's
so I felt it would have been inappropriate to respond with something
of that nature.)

10-4 good buddy?

I'd like to use an Optoelectronics Scout with an ICOM R-7100.
Has anybody had any luck with this combination?

Is the cable just a straight through cable?

What CI-V settings does the R-7100 want? Any strange Scout
settings other than to use CI-V?

Thanks and 73,
Jim N2VNO

>"cost someone their life?" Are you referring to a "startle reaction"
>when the officer hears my pleas for help, and is awakened from his nap,
>or he spills some Dunkin' Donut coffee on himself?

Well, I have been at RTAs and other emergencies myself, and it's curious how many times hams turn up asking if they can help because 'they were passing by'.
This kind of behaviour I cannot accept. I think it's legitimate that if life (not property) is in danger, you should be allowed to use any frequency in the spectrum to try and make a call.
I also think it's true, that if you have both a cellphone and a HT, use the cellphone first, then the HT in your licensed bands, and then wherever they can hear you.
I recently myself came across an RTA that happened about 30 seconds earlier, and I called an ambulance on the Red Cross frequency, as the valley we were in had NO cell coverage. I also heard the local Police get a call from someone who just arrived at home reporting the RTA, and when they got there, the ambulance was well on the way.
Had I not made the call, the Police would have had to (via their radio autopatch), and the victim would have lost many precious minutes.

>Good idea! If I witness a robbery, rape, or shooting I'll call the
>police chief at home and ask if I can use their repeater for 10 seconds.

Those situations warrant 'alternative' means, but there are a lot of other less sensitive frequencies, like cab firms, etc. etc.

>will not take a system down.

Er...yes it could. If the lights go out, then the trunked system goes out.
If there is any problem with the computer running the system, the system
could go down.
With amateur repeaters, they can be almost any mobile radio which does
VHF/UHF (I can set up my FT-8500 to be a cross-band repeater in 10 seconds).
Also, they are simple, PC-free, reliable things, and there are also portable
ones.
Hey, they even run on batteries !!!

Ok, here is my my problem, thank you in advance for all that reply.

I live near Philadelphia, PA, and PHL PD are assigned a trunk. The problem is that they have over 30 freqs. How do I program the trunk into the scanner if there are only 30 spaces. Is there a way to find the data channels and seperate them?

Any help is appreciated.

Please use the following e-mail address. Apologies for teh wierd spam-filter chars, but I get enough spam already.

Delete the "*"'s.

mw*al*dr*on@*ohi*o.net

For Sale, Icom PCR-1000

This is the computer controlled receiver, full frequency coverage from 10kHz to 1300MHz.
It's a wonderful receiver, fully computer controlled, and beginning to see a flurry of third party support.

$400.00 + Shipping/COD

For Sale, Icom R-10

A top notch handheld receiver, can be fully computer controlled. Full frequency coverage from 500kHz to 1300MHz.
This is an export version, the case has never been opened.
It also included NiCad batteries, as well as the CSR-10 Dos Cloning Software.
This radio is supported by most computer scanning solutions because it utilizes the standard CI-V command set.

$350.00 + Shipping/COD

If someone would like both the above, I will sell them for $700.00, and I will pay for shipping.

If you're wondering why I'm selling, I'm trying to consolidate my radio equipment to generate some extra cash.

I will entertain _reasonable_ offers on the above receivers.

Thanks for your time, Please e-mail me at above address.

Your best place to get this info would be the Mr. Scanner or Spectrum CD ROMs. BTW: I took my Pro37 and my Cub counter on Carnival's Jubilee a few years ago and had alot of fun with them. One day, I heard the wireless mike frequency that was being used on another ship that was docked next to us while we were in Aruba. I was hearing one of Royal Carribean's ships and they were using the mikes for games being played poolside. I could also hear security frequencies used at the Aruba terminal and while we were in San Juan, I heard IFB audio from WSJU TV 18, an NBC affiliate in San Juan and I also listened to San Juan PD (yes, the dispatchers and officers are bi-lingual). Lots of stuff to listen to on these Carribean cruises.

3419. RCA Handhelds: Are they any good?

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: jbseale <jbseale@iglou.com>
Message-ID: <35DF7F64.3CFDEB4C@iglou.com>
Source record: 146742

Yes, RCA has broken into the scanner world with two handhelds (to my knowledge), Both units have pretty much the same features as your Uniden/Realistic models. But they also have an attenuation feature, and it didn't appear by accident (as it did on Uniden's 235XLT). I also happened to noticed that the "sports" version of this scanner has 200 channels, which is odd for such a model (most "sports" scanners have only 100 channels), and this thing is dressed in RED plastic as opposed to yellow. Is that weird or what?
Both of these were at h. h. gregg in Louisville, KY.

3420. Problem with my HS200 was NOT CEI's fault(everybody loves CEI!)

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: dpepper2@yahoo.com
Message-ID: <35df89f9.19000983@news.mindspring.com>
Source record: 146743

Well after several days of responses, the limited range of my HS200(as compared to my Pro-50) apparently is normal for the HS200, and not the fault of CEI. The overwhelming response was quite positive regarding CEI, so I can only assume that the range is normal for this scanner. Therefore I must publicly thank CEI for giving me a great deal on the HS200. I certainly wil buy from them again.

3421. Seeking advice on wiring Yaesu FT-2500 to a Honda Accord's battery

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: dpepper2@yahoo.com
Message-ID: <35df8c5f.19615826@news.mindspring.com>
Source record: 146744

Just bought a Yaesu FT-2500M, but after looking under the hood of my '92 Honda Accord, the idea of wiring it seems a bit daunting. Anyone have experience in connecting the power cord to the battery through the firewall of an Accord? It seems the only place to run it through is on the far upper side of the passenger side, under where the fuse box is. Can I run the line through there without drilling another hole in the firewall? Can I move the fusebox to access this area by unscrewing its mounts without causing electrical haywire to my car? Anything else I should know? If a hole must be drilled, where should I go to have this done without paying an arm or a leg?(or having passengers get wet feet on a rainy day!)

Thanks for any advice,

Daniel Dave Pepper

Is there a mod for the cell phone range?

Fantasy...
Can this scanner be modified to pick up AM, FM, CB, SW, etc.
In other words everything between 1Khz to 960MHz....??

>
>Thanks for any advice,

Without being sarcastic, I'd really recommend you get an auto electrician to install the whole lot. It shouldn't cost you too much - there's less than an hours work.

Stuffing around with your car's electrical system and/or communications equipment can end in a lot of heartache. It'll take a lot longer timewise to fix any problems you cause, than it will to get an auto electrician to. Not mention any costs in repairing your Yaesu.

When it comes to a car electrical system, you need to know exactly what you are doing.

Cheers.

Dion Mikkelsen.

3432. Re: EMERGENCY Transmission!!

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: dean173@aol.com
Message-ID: <1998082305501900.BAA22935@ladder03.news.aol.com>
Source record: 146755

Would anyone care to prolong this agonizing thread by debating the fact that civilian's definition of an EMERGENCY can differ wildly from that of the police?

Locally, we publicize our local phone number for NON, and 911 for Emergencies. Our 911 line is often clogged with calls from
local residents who should know better, reporting traffic signals out, flooded roadways and power outages. Excepting the rare case,
of course if you are on Home Medical equipment, etc, etc, a power outage IS, but
99% of the time IS NOT.

That being said, what we are lacking here is
a breath of common sense. Laws be damned,
if you can provably save someone's life or
limb from IMMINENT or EXISTENT danger, you would be remiss not to use any means within your ability not to help in any way possible. If you do, in fact, save a life,
you should (and might) get an award for it.

HOWEVER:
If you use unauthorized means for anything short of a true emergency, you should be prosecuted to the fullest extent possible.

Example A: You drive by a person lying
face down on the sidewalk. You stop, go to him, roll him over, and discover he is not breathing. You call it in on your HandyDandy
6000. You win. I can't argue with you.

Example B: You drive by the same person,
face down etc. You don't check to see if he's breathing or not. You call it in, same method.
The 3 arriving units find a drunk with a broken nose. Big deal. You lose, and should be arrested and charged.

Do YOU want your local police frequency tied up with the likes of Example B, while the
dispatcher waits for the frequency to clear so
she can send the troops to YOUR house for the real thing? If you think this is unrealistic,
you have not long monitored a busy police channel.

Extreme example: Should we pass out HT's,
one for every block, and trust in everybody's judgment?

I used to carry my HT religiously in case of "emergency". It is no substitute for a cell phone.....and let's not get ridiculous. What

are the odds that you are in a dead cell area, but the PD will hear you at 5 watts? Hell, 3/4
of the Police Radio towers are renting space to the cell companies anyway!!!!!

ENGLEWOOD, FLORIDA - NOVEMBER 13, 1996

Virginia Judge Rules That Radar
Detectors Equipped With Safety
Warning SystemTM Are Legal

On October 30, 1996, The Honorable Robert Phillips, Judge of the Accomack County (Virginia) General District Court, Traffic Division, ruled that radar detectors equipped with the Safety Warning System are not subject to Virginia's long-standing detector ban.

The Safety Warning System (SWS) uses technology similar to that found in motion detectors, automatic door openers and radar detectors to alert motorists about to encounter abnormal driving situations.

A radar-based transmitter operating on pre-approved radio frequencies sends an audible tone to radar receivers or detectors. New "smart" detectors already on the market also have the capability to display a text message which scrolls across a small screen on a portable, dashboard-mounted unit.

One of more than 60 standardized messages, such as "Work Zone," "Emergency Vehicle Approaching," "Accident Ahead" and "Train At Crossing," can be activated at any given time.

The ruling by Judge Phillips was handed down in a hearing on a detector violation issued to retired Cape Charles, Virginia, Police Chief Bill Lewis. A proponent of safety radar devices, Chief Lewis was testing three radar detectors on the dash of his vehicle at the time he was stopped and cited for violating Virginia's radar detector ban.

Virginia's law, in effect since 1962, also includes an exemption for devices "used for a lawful purpose" and transmitting on licensed frequencies. In the rear of his car, Lewis also had a safety radar transmitter which he was testing for possible interference from a nearby airport. Even though Chief Lewis told the trooper what the

devices were and why he was using them, he was ticketed and told to "tell it to the judge."

In court, Chief Lewis argued that the Virginia radar detector statute exempts any receiver of radio waves used for lawful purposes and received on a frequency lawfully licensed by state or federal agencies.

Chief Lewis produced evidence proving that the transmitter was broadcasting on a frequency band licensed by the Federal Communications Commission the band is identical to that on which a K-band radar gun broadcasts. At no time during the course of the hearing did the Commonwealth of Virginia contradict this evidence.

Judge Phillips then found Chief Lewis not guilty of violating the state's anti-detector statute.

Legislation is pending in the Virginia General Assembly to repeal the state's radar detector ban. If passed, Virginia motorists will join millions of other drivers across the nation who are free to receive the warning alerts and traffic-related messages being broadcast by a growing number of Safety Warning System transmitters.

(Currently the only other area in the United States that bans radar detectors in passenger vehicles is the District of Columbia.)

We're dealing with alot of "what if's" in these situations.

I agree with what RobAZ1 wrote. I don't think it makes any sense to try to talk on a police frequency. You have no idea what is going on on that frequency. They may have cleared it for emergency traffic because of a situation across town.

I'm not saying that you shouldn't notify the police. I'm just saying that you should be prudent on how you do it. Yours may not be the only situation requiring immediate attention in that city. Additionally, the dispatchers probably could not continue a discussion on situation, location, suspects and such on that frequency.

In any situation, you should get as much information as you can and summon help in any way you can (send another to call 911, call from your wireless phone, etc). Information like license plate #, description of possible suspect, direction of travel and relay that to the proper department in the best way possible.

Transmitting on a police frequency hinders the departments ability to conduct normal operations. I would never condone that method.

Guess what? If its an emergency, who cares what the cops/fcc think
about it???
Let them take you before a jury and explain that you used their specific
frequency to call for help in an emergency.
If the jury is informed, they will laugh in the face of those seeking to
bring charges against you.
REMEMBER: JURY NULLIFICATION is where the jury overrides the law and
says that in this instance, the law should be ignored.
Jury Nullification are the only words a quality jury needs to know in a
case like this. And, when an attorney, prior to being assigned to a
jury, asks you a few questions, the first two words out of your mouth
should be "Jury Nullification". He will throw you out of the building
because those are words you are not supposed to know. Those words give
you tremendous power over the case being heard. No matter what the law
says, in a state where J.N. is legal, you have the right to ignore what
the judge says, and inform the court that the jury has come to the
conclusion that, in this instance, the law should be ignored via J.N.
Boy, you will upset the control phreaks in the court because you are so
smart!

I find it a great value of money. Not the greatest radio on Earth -
but it does work as advertized and the software is fun to use.
Be sure you get the free memory manager from the Winradio Web site. I
find it great for organizing the memories.

Should be a good place. I bought a BC-3000xlt from them last year. Good price and prompt shipment.

3447. Florida: Using a scanner in a car

Newsgroup: rec.radio.scanner
Date: 1998-08-23 00:00:00 UTC
From: catz@netrox.net
Message-ID: <35e1e938.93446745@news.netrox.net>
Source record: 146770

I have heard different things about using a scanner in a car in Florida (Miami in particular, Dade County).

Some people have told me it is flat out illegal unless one has an amateur ham license. If this is the case, I would be curious as to exactly what level license one would need to operate legally.

Others have told me that it is perfectly legal to do so providing the scanner is not permanently mounted in the car.

I'm trying to figure out if anyone knows what the real scoop is on this and if they have a statue they could point me to on the web verifying same.

And am also curious how the cops react to people they run into with scanners and whether they even really care. Anyone have any experience with this?

Thanks.....any help would be appreciated.

Catz

Did anyone else see this? The Houston Chronicle is reporting that Harris County, Texas, will be the first place in the world (minus the New Jersey tests) to put cell-phone locating technology into real service.

The article reports that the system will be in place by the end of this year, and will go with TRUEPOSITION which uses Time-Distance-of-Arrival approach. The roll out will be small...only a certain segment of a particular wireless company will have this feature enabled for them, but it marks the beginning of a new era in civilization (gee, who 'da thought a place called Harris County Texas?). The system will evolve quickly though, and I suspect such announcements will begin to roll in as the months pass.

You can read this article for yourself at

http://www.chron.com/cgi-bin/auth/story.mpl/content/chronicle/metropolitan/98/08/21/network.2-0.html

but be warned there is a registration process involved. It's free and once you answer the last question, you will be taken right to the article.

God gave us a brain and a set of rules to operate by, the FCC gave us a license and a set of rules to operate by. You transmit out of band with your rig it better be an emergency.

I doubt if a standard modem is designed to handle Audio
Frequency-Shift Keying (AFSK) with those mark and space frequencies.
If you're handy, though, you should be able to build a pretty simple
demodulator using phase-locked loops to create the narrow filters.

I've recently purchased an ICOM 2710 for $480, an ICOM 207 for $380, and
2 W32As for 289 each. I friend of mine picked up a Yeasu 8500 for $350.
All of these are dual band with crossband repeat (except for the 207 which
is dual band but only one band at a time) and were brand new. If you don't
mind buying used you can sometimes get a really good deal. Another
friend of mine picked up a barely used 2710 for $200.

That just my 2 cents.

Also, you can simply use a directional antenna, which confuses the
triangulation process. Of course they will still know which phone
placed the call, from the ESN.

Yes. I owned one in California for a year. I was very disappointed with it. It had an excessive noise floor and poor sensitivity altogether. I was very pleased to have taken Glenn's (the owner of Scanner's Unlimited in San Carlos California) advice and tried a "Monitenna" from Channel Master. It turned out to be the most superior antenna I ever owned and I feel as if I owned them all. Austin, Grove, Channel Master just to name a few. The higher you get it and using a non-metallic mast, the better it performs. I challenge anyone to find a antenna to outperform it across the entire range of 25mhz to 1300mhz. If you want to talk to Glenn about it, you can reach him at his store Tuesday through Saturday. (650) 573-1624. Good Luck.

> >>
> >> Can anyone cite FCC regs? Is this technically permitted?
> >>
> >> Dave McGuire

Your first problem is that your assumption is incorrect. If you are not
licensed by the FCC to transmit on a given frequency you do not have the
right to do so for any reason whatsoever. Even a ham radio operator who
is licensed by the FCC to transmit on multiple frequencies is not
permitted to transmit on any frequency they choose. They can only
transmit on the frequencies that they are licensed for. And a ham radio
operator is not licensed to transmit on the public safety frequencies,
solely because he/she is a ham.

If you have a two-way radio (a radio capable of transmitting) it is
supposed to be licensed to someone. The fact that you can purchase such
a radio, capable of transmitting on the public safety frequencies,
without proving that you have a license to transmit on those frequencies
simply points out the loop hole in the licensing requirements and the
desire of the company that sold you the radio to make a buck.

O.K. Don't shoot me over this but I think the way they see it is that
if it was free everylittle kid and non buyer would take one and they
cost something to produce so they charge the 2.95 to keep the flakes
from walking off with them then having to cover the losses thru higher
product prices. So, to satisfy the purchasing public, they place
coupons in the catalog that well offsets the purchase price. I don't
work there but that's how it's worked out for me this past five years
PLUS they send me a coupon that can be used during the month of
my birthday that is good for 10% off ANY purchase. So quit your
whinning and buy the damn catalog and use the coupons and you can
actually save way more than the 2.95 you spent. If you don't buy
anything from them then maybe GIVING you a nice bound color catalog
would cost the rest of us higher prices when WE buy something, think
about it.......
Neal
Anaheim, Ca
P.S. I don't work there or own stock.

Don't waste your time. The Motorola Secure Net digital encription (DVP, DES & DES-XL) is one of the hardest to bust. It will cost you LOTS of your hard earned money and time to do it and most (99.999%) of law enforcement abencies change their code key on a daily or more basis. If you get caught even trying, its a FEDERAL CRIME. Its not worth it.

I recently saw Tandy's chairman on one of the business programs. To sum
up what he said in my own words, they are interested in selling cellular
and long distance phone service. The rest is window dressing.

Why do you think that their trained monkeys (with my utmost apologies to
those trained monkeys out there who may take offense at this statement)
always hit you up to sign up for cellular phone service or change your
long distance carrier every time you walk through the door???

3493. AVCOM SDM-42A Spectrum Display Monitor

Newsgroup: rec.radio.scanner
Date: 1998-08-24 00:00:00 UTC
From: Ron M <monfeli@mail.telis.org>

Source record: 146515
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

This professional Spectrum Display Monitor is designed for use as a panoramic signal display for VHF scanners and Communication Receivers such as Icom, AOR Realistic etc. The SDM-42A displays all signals present in the receiver's IF on a 5" CRT so that the operator can monitor signal activity up to a full 10mhz wide. The operator can then quickly tune to signals as they appear in the spectrum display. This greatly facilitates locating and tuning of intermittent signals as well as surveilling a particular frequency band. This unit has been used in a

hobbiest environment not a professional one and is in excellent condition. Asking $750.00.

Well, for starters....
1) S-meter
2) Center Tune Meter
3) Extended Delay
4) Auto Tape Record Switch
5) Extended memory
6) Data-Tone Squelch
7) SCA Decoder
Basic mods from internet and the book "THE ULTIMATE SCANNER"
8) Computer interfacing
Optoelectronics OS535
http://www.optoelectronics.com/
PROgramit Interface
http://www.qsl.net/ka2pyj/
Boondog Automation ISA card interface
http://www.boondog.com/
9) Remote Control (see PROgramit's page)
There are others that can add a few features, but they don't readily
come to mind.

>Actually Hams just get in the way and could cause someone to get hurt or
>killed. They know nothing of how to act reasonably in a life or death
>situation.

I left Law Enforcement because most cops I worked with fit the same this description. One who still works as a Deputy Sheriff almost shot me on a trespasser call, when there was no justifable reason to use deadly force at all. This same individual two years ago left a suspect lock in his Police Car with the heat on full during a 95 degree day until the man passed out.

>
>If you are near a phone, use it. 911 is a free call. If you have access
to a
>Ham repeater call on it or if equiped with autopatch use it. If you have a

call
>911 do so. But if you have a modified amateur HT, which as modified is not
>type accepted to use on commercial frequencies, don't trnasmit on the
Police
>radio frequencies. Your doing so could cost someone their life.

When the chips are down and someone's ass is on the line, who cares how help is summoned. My best friend was shot by a dirt ball while trying to figure out all that justifable use of deadly force guidelines. Like the old LA Cop said many years ago "It is better to be judged by 12 than carried by 6"

>
>If you want to transmit on Police radio systems get permission from the

Oh I forgot, try finding a pay these days, especially in BFE. I work for the phone company and can tell you we are getting out of the pay phone business due to the lack of PROFIT. Money Talks Bullshit Walks, some thing I learned working Washington DC metro area.

I read the messages posted on this net and, over half of them are putting down individuals that, obviously, some person(s) has a vendetta for. As grown adults (I hope), can we leave the rude comments to ourselves, or, if really inclined, post them off the net. I believe useful information may be in the net but, as of this time, it is a waste. I will stay subscribed (for now) but, I am really getting turned off. Like any good CB or other radio, the on/off switch is a handy device.
I don't write this to cause flames but to ask that writer's use common courtesy, not be common, in the writings they produce.
Thanks to all. Ed

Source record: 146525

Whoa! He he.

I think that they should just make the catalog completely free of charge,
even if no purchase is made. Heck, TechAmerica (a division of Tandy,
interestingly) has a catalog about three or four times the size of Rat
Shaft's, and they charge absolutely nothing for it.

I guess $3 is not much, but it really is the principle of the thing...

I agree 100%. Those RS idiots haven't figured out that in business to make money you must spend money ie. catalogs. What always amazed me about them is that they pay so little to train their staff. The ignorance of their sales people became such a joke that instaed of truly rectifying the problem with improved training, they come up with a slogan that denies the existence of the problem: "You've got questions, we've got answers" ......righhhhht!

Since VIA Rail no longer has conductors, you may wish to add the following
frequency:

160.2000 Mhz.

It is used for communications between the enginemen and the Service Managers,
and the
Service Managers and Service Attendants. The above frequency is the one used
in
the Corridor, and should be the same elsewhere.

You can always ask one of the Service Attendants to have a look at his radio
monitor.
The frequencies it covers are listed either on the back or on the bottom.

Message-ID: <6rs3pt$b3@freenet-news.carleton.ca>
Source record: 146536

Yupiteru MVT-7100 Multiband Scanner/Receiver

One of the best scanner/receiver units money can buy!

- frequency range from 530kHz to 1650Mhz in receiving modes:
Wide FM, Narrow FM, AM, LSB and USB (including cellular band)
- twelve frequency steps can be selected
- 10-band search function
- 1000-channel memory
- comes with car connector, hand strap, belt clip, earphone,
original box, owner's manual and original receipt
- purchased in November 1996: used no more than 25 hours
Price: $500 CANADIAN CASH FIRM

Originally paid over $900 from Atlantic Ham Radio. This was the
second model from the top back in 1996. It was hardly ever
used (practically brand new). Yes, from the above frequency range,
you can receive all analog cellular conversions!

Serious inquiries ONLY. Located in Toronto. Leave a voice number
if interested.

POC32 is a fantastic piece of software that can decode pager signals.

It is worth every penny of the meagre registration asked, and no, I'm
nothing to do with the author (other than a user of his software)

Old farts with health problems

nope that ham (at least in my area)

or the most foul, disgusting language
heard on CB (quite unsuitable for family use).

depends on where you live and what mode you use

Why not try FRS?
too short range.

getting a ham license seems really easy. I have started studying and if i
kept up with it i would probably have it by now.

www.arrl.org might be a good place to get some info as well.

It depends on the store and the manager.

Correct me if this is out of date, but.... My understanding is that the store managers are well trained, but work with great autonomy. They operate as if the store were their own. They decide who to hire and how to train them. Too many just go for minimum wage droids. Some look beyond just what their payroll is that week. There's a great RS near me that always has well trained people. They're across the street from a high tech office park, and figure they're dead meat if they can't service those customers.

So when you got to a RS, you're patronizing the individual store, not the company. Just like the auto repair job you get at one Shell or Mobile station has nothing to do with what will happen at another.

Want to be a Ham Radio Operator?

Now you can get an Amateur Radio license without learning the Morse code.
First, you need to study the FCC Rules that apply to Novices and Technicians, some antenna theory, and electronics theory. Next, you take a 30 question multiple choice test and a 25 question multiple choice test. You can buy a book with all the questions and answers in it at Ham Radio Outlet or any Radio Shack store ..and start studying.
If the Morse code does not scare you, you can get beginning code practice tapes with your study material and start with the Novice license which requires ability to copy code at 5-words per minute.
A Novice gets more HF privileges (longer distances) and a codeless Technician gets more VHF and UHF privileges. If you add the code at 5-words per minute to the Technician license, you get all of the Novice and Technician privileges.
PARC (Palomar Amateur Radio Club San Diego)annually conducts licensing and upgrade classes beginning in late spring and continuing through the summer. Classes meet one evening
per week and carry the student from Novice through the Advanced class license.
If you are interested in computers, you can access bulletin boards and contact other computers via packet radio. Technicians can also get involved with Amateur TV, microwave transmission, satellites, earth-moon transmissions, community service, transmitter hunts, and use mobile UHF and VHF radios.

> <snip>

1) You need to make a "dummy" telephone coupler to connect (I expect) the audio output of a UHF receiver to the Telephone-Line connection of the modem. Older modems can be direct-connected (possibly needing an attenuator network), but newer modems need "loop current" of about 33mA to make them happy. 3) Set up whatever communications code/ software for appropriate serial port and parameters. 2) The modem must be FORCED to Bell 103A Originate mode to prevent Auto (Non-) Sensing of carrier by sending it an AT initialization string. The AT commands differ from modem to modem; for example, a Diamond SupraExpress 336 needs: AT&F&Q6S37=1N0+MS=B103,0,300,300 4) Start "communications session" by sending to modem: ATA Note: if the carrier is marginal or cuts out occasionally, you may wish to disable "carrier-loss disconnect" by sending modem (before ATA): ATS10=255 -- W.D.A.Geary Wardenclyffe Microtechnology Time flies like an arrow, but fruit files like a banana.

I've heard it mentioned before it alt.radio.scanner/rec.radio.scanner.
The program is supposed to be a POCSAG encoder/decoder that you can use
on WIN95 platforms..

Hi,

>i have been looking into purchasing a handheld scanner for a couple of
>months now, but am a bit confused about what step sizes i will need. i
>hear of this 8.33khz step size, but mainly in the UK newsgroup. will i

Your in the States I assume (St Louis area ?) so the 8.33kHz isn't
really an issue you need to be worried about.

The introduction of 8.33Khs steps has been delayed again to October 1999
although this will not be extended. As things stand at the moment
Germany and France will probably intriduce them first - here in the UK
it will be some considerable time before allocations come into effect.

>be limited by a handheld such as an mvt 7100 or aor 8000 if it doesnt
>have the proper step size? it seems that neither of these have the
>8.33khz step but the mvt 9000 and aor 8200 do --- both a bit to rich
>for my blood. any ideas or comments? thanks.

The MVT-9000 does not have 8.33kHz step sizes as such. The "Offset"
feature allows 8.3kHz frequencies (132.0083 for example) to be selected
but the AR8200 is currently the only scanner that implements 8.33kHz
step sizes correctly.

Even when/if 8.33kHz spaced channels become a reality sets such as the
MVT-7100, AR8000 and anything with steps sizes of 5Khz or smaller will
be able to receive transmissions without much trouble. Whilst the
display may not be exact you will still receive them OK.

If you get the chance try tuning to a VOLMET frequency and tune up/down
in 1kHz steps and see how far you can go before you loose the
transmission.

Hope thats of some help.

Cheers,

Hi All,
I have a Pro-62 that I posted some problems with a wile back.
The new question I have is this. The 62 already works in the
cell and cordless phone area and so mods are not needed for listening.
I don't really listen to these frequencies but once in a great wile. (It's
True, I'm a Air Band guy) If I send this radio in for repair one, will the
unit be changed to lock out these areas or will it be made to meet the
design specs? Second, Does any one have a place they recommend to
send it in to for repair and if so why do you like them?
Thanks for the time.

Buy an inexpensive frequency counter. This is the right tool for the job. They are made to determine the RF frequency of a nearby signal. You might be able to determine the freq. with your scanner eventually, but the counter will do the job instantly.

Not unless it's changed completely from the days I was there (late 80s.) My experience was just the opposite: the store manager had NO authority whatsoever. All directions, hires, mandates, etc., were by direction of the District Manager...who, in turn, received his "marching orders" as they were handed down from the Regional Manager...who got his directive from Ft. Worth. Typical "stuffed suit" corporate "one size fits all" BS.

It is time to stand up and be counted for your friend and mine, Bill Cheeks. You can help by drafting a message to the following e-mail address, and tell them you want Bill back on the news group and you would like his account reinstated. Bill has done so much and worked so hard for us all, that I feel we owe it to him. Send your request to the following address:

ekruse@san.rr.com

and help us to save an important radio resource, before it is gone.

>> I have a pro 2026 - mod # 200-0148A.....date tag is 7A4<<

The 7A4 tells you the scanner was manufactured in July of 94. To be cell-modifiable, most scanners have to have been manufactured before April of 94; for example those with date codes of 1A4, 2A4, and 3A4 would be OK.

As I understand it, the police in many major cities now use the data-channel
(I would assume) transmissions to multiple receive sites to triangulate the
positions of their officer's locations. A little bad luck would have a
cruiser right near your location at the same time you broke in.
It's a good idea but discretion is necessary.
What happens when a few hundred people start breaking in and bitching on the
various public-safety freqs when, say, their power goes out during a
lightning storm?
How many people do you know that you would trust to have the discipline to
stay off unless it was truly an emergency? (Not to mention their judgement
as to
what constitutes a real emergency.)

Hi,...

I have an AOR1000 .5-1300MHZ Scanner, full cellular, cordless and
military.
1000 Channels in 10 banks has the search feature.
Brand new rechargeables and antenna.
I must sell in order to buy gear for our band.
First $250.00 takes it, I will ship.
Thanks,
Jeff

>Finally; Roy; you nor any other American have enjoyed "rights" for at least
>20 years.

Let's start this by pointing out that we agree wholeheartedly on this
point.
We haven't had representation since the form of government went from a
democracy to a republic in the very beginning of this counrty.
I have only recently become aware what you stated...lets just say I
was in hibernation. I don't like it...do you?

>Roy Harrison wrote in message <35e0812b.118618379@froot.cc.bellcore.com>...

>>B: They love people who contemplate their navels while the tanks roll
>>by and their rights fly out the window.
>
>
>Maybe you need to "Contimplait" a spelling book Roy.

I saw that mistake after I mailed it and regretted it immediately.
Being pretty sure you'd point out a petty mistake to try negating any
thing else that the idea may have tried to convey. You held true to
form.
>
>>...it is a life and death type of situation. It affects
>>everyone...
>
>Yeah...a loose cable could electrocute me on my scanner. :)

Not the news group silly...the politics of this country. jeeeez

>Have you written your congressman lately Roy?

I have... I've also written the Whitehouse and campaigned to get the
Green Party's candidate on the ballot here in Jersey. It's not that I
had any belief that things would change at this point in time, but I
felt that if "I" didn't get off my ass and try something, then how

could I look myself in the mirror when I saw nothing had changed.

By the way, Jersey's pretty good about getting a new candidate on the ballot. You need to get 800 votes to do so. Actually it's more like1600 since the republicans and democrats will both pick the lists apart and it's best to get twice the required amount instead of going through the process of defending every one they challenge. You know petty things like dotting an "i" , someone signed with middle initial but printed their name without one, didn't include zip code. Anyway, some states require thousands and tens of thousand signatures to get a new candidate on the ballot. In these states the Republicans AND Democrats have basically passed laws to assure you can't initiate change in those states. It guarantees them a monopoly or should I say a duopoly. To me these laws are a crime against the American people.

>"Mr. Smith Goes To Washington" is just a movie Roy.
>
The idea's behind it don't have to be though. I believe we've been conditioned to accept bad conditions as being necessary or unavoidable. It's almost part of the Judaic/Christian philosophy that suffering is in some way noble and good. This mentality is a natural for a social system that has the majority scrambling for leftovers while a minority live like Kings. I know better, but wasn't that what we were taught the purpose of the revolution was? To get rid of monarchies?

We still do have a vote in this country. We've just been given garbage to vote for. When people get sick and tired of it and quit blaming all the scapegoats then maybe real communication will begin and change can start.

The following systems are Motorola Type I, this is probably where you
are running into a problem. You need to program the proper fleetmaps
for correct operation. Here they are . . . .

b0,s12 b2,s12 b4,s3 b5,s3 b6,s10 b7,s10

Both counties use the same fleetmap . . .

For more info, I would go here http://www.qsl.net/kb8vju/

Look in the "Police Call" book sold by Radio Shack. A better option would be to ask your local police department, because all 10 Code lists are different from others around the country. A few 10-xxx are the same but a lot of them are way different. Do a net search on "scanner AND frequencies" to see if you can find one close to your area. Here is one place to start:
http://www.geocities.com/CapeCanaveral/Lab/1060/scnrng.htm

http://www.geocities.com/CapeCanaveral/Lab/5137/scanner.html is a really good page

http://www.sparknet.net/~jtenor/list1.html is for Green Bay, but has a few links.

Any of those will get you going toward more information than you can possibly digest.

There is a way around this. If you want to not be dectected, place your call from the outside fringe of their area which will allow fewer cell sites to be involved in the detection of your signal.

Inside their standard zone, youll have several sites looking at you.

>I have only recently become aware what you stated...lets just say I
>was in hibernation. I don't like it...do you?

(Major Snip) Sorry

No Roy; I don't like it, but unlike the whiners in this NG, I've taken measures to protect myself against a loss of rights, loss of property etc...Unfortunately I can not and will not elaborate further on this except to say this as I crawl upon my soapbox:
Many years ago in this country, there was a little thing called the Boston Tea Party. Essentially as we all know this was due to many being fed up with "paying to be free and yet not truly being represented." Wow! An act of violence. Though I DO NOT advocate violence, the writing is indeed on the wall. Look around you. Terrorism, bombings, crime rates soaring contrary to "government reports", and the most dangerous of all...APATHY!
It seems we are all far too content as long as our stomachs are full and we have 2 cars in our garage.
80% of our Senatorial seats are held by millionaires. They know how to represent us? Please! They know what it is to balance a checkbook? Please! They know what it is to make a household budget? Please!

Ever hear about the frog in the pot?...If you throw him in at full boil, he'll jump out....BUT; place him in cold water and slooooowwwly turn up the heat, he'll die and never know how it happened. Need I elaborate on that one?

There is and has been a "Tea Party" boiling in this country for a long time. Soon, someone will say "Hey; they're killing us!" How?...By slooowly eroding moral fiber, passing laws at 2am when no one is watching C-Span, requlating EVERYTHING from Internet to Gun Control. The list is VERY long. The violent incidents we have seen in the past 5 years are simply a few sneaking on the boat and throwing a few bags of tea into the drink. BTW; writing your congressman is a complete and total waste of time. I am so tired of hearing "if you don't vote, don't complain." A grass roots revival? Can't happen

now. In order to have grass roots, you need fertile soil. That soil doesn't exist because "they" also requlate what is taught in the schools. Nor do we have the soil for the roots.."they" own that too!

The Soviet Union for many years feared such an uprising amoungst the people. What did they do? The found party members who would blend in with the common folk and incite a few to riot. Why? The reason: Several small fires are easier to control than a major burn. So now the people feel happy and content, they had their small fire, and will have more...all carefully controlled and orchestrated by the government. Hmmmm? Could that be happening in the U.S? Hmmmm?

Well, I suppose I'll get off my soapbox now and offer only this advice as a starting point.

Scanners: Buy all you can get. Buy transmitters too. You're right. They WILL be outlawed someday soon.
Get a GPS navigation instrument...maps too..topo are best.
Decide where you want to carve out your existance....nice climate if possible.
Read all you can on survival...do it now as books will disappear soon..some already have..ever seen "HTTP URL not found"?
Start investigating how to make yourself disappear...No SS, no DL #, no nothing...It's really not that difficult once you learn.
Stop bitching. Get real quiet real fast.
Got a secret?..Keep it to yourself.
LEARN FROM THE PROS: What does the CIA do primarily? The collect information. Tons of it.

Food for thought. Although some 10 and 11 codes are somewhat 'universal',
there are several variences in them betweeen agencies (especially in different
states).

Hi to everybody !!
I would like to acquire data from a weather radiosonde that it
transmits on
404 MHz whit the following communication parameter: 300, N, 8, 2
in AFSK (2025/2225 Hz)
(but I can make some adjustement in tones on the trasmitter)
I have tried to use a modem, but without result ;it seems it cannot work
without the phone line signal and a remote modem. Can I start data
acquisition before the carrier detection and handshake process ?
. I have thought to use the Sound Blaster, too, but I have found no
programs
supporting the communication parameters that interest to me.
Is there any software I can use ?. In alternative, a TNC could work?
Thanks in advances

I guess here we go again with the inconsistency of RS.
I bought the Pro-90 case at RS and they gave me a catalog but only first
after getting my name, rank, and serial number :) Actually, if you
give them your name and address they should give you one for free.
That's what they did at the Mall of America RS in Mpls.

Radio Shack PRO-51: Modification to shorton squelch tail

This change was performed successfully on a unit coded "11A3." The CPU in this unit was marked "Uniden UC1581." Use the following information at your own risk! Neither I nor my employer are responsible for any damages you may incur from this information!

Orientations are with the set flat on a work surface, LCD display facing down, with antenna BNC and knobs facing away from yourself.

As with any electronic instrumentation, remove all power and take all necessary precautions to prevent damage from electrostatic discharge (ESD). This modification requires fine soldering and familiarity with surface mount devices.

CAUTION:

Be aware that parts of the circuitry will *still* be powered! There is a capacitor on the digital board that keeps the channel memory alive. This capacitor may contain enough energy to damage the electronics should a short occur.

Parts required: One 1/10th watt carbon resistor, 100K to 220K. Value is not critical. A lower value shortens the time the squelch remains open after incoming signal stops. The resistor should physically as small as possible.

Opening Case

Fortunately, this set is very easy to open. Open battery compartment and remove batteries. Remove four screws: two straddle the sticker on the back of the cabinet, two others at the upper part of the battery compartment. There are two small plastic detents at the floor of the battery compartment. They are directly downwards from the "-" and "+" legends, which are molded on an extension of the removable back. These detents will need to be unhitched to allow the back to separate from the front. Pull back off gently.

Remove RF board

The RF board is attached to the top panel, which contains the volume and squelch controls and the antenna connector. At this point, the board is essentially free and will separate from the rest of the set when the header connector at the lower right is pulled apart. This header provides electrical connections between

the two boards. Lift the RF board straight out, and set the rest of the radio aside. Flip RF board over, keeping BNC pointing away from yourself.

Add resistor

Refer to the ASCII diagram below. Bend one of the resistor leads close to the body of the resistor so that the resistor forms a hairpin shape. Trim leads and solder the new resistor in parallel with the chip resistor marked "105." The latter is positioned between the two surface-mount IC's towards the bottom of the RF board. Press the new resistor parallel to the circuit board, making sure there are no shorts.

> of handheld scanners with existing shortwave receivers.

Hey Bob,
Agreed. Compare is one thing, but to hold unreasonable expections of the handheld is not fair, IMO. I see many people who continue to not understand why a DC-to-daylight handheld can't perform as well as a dedicated HF radio. And to clarify my original point, I was commenting more on unreasonable comparisons between a "scanner" and a "communications" or "wide-band" receiver. Everyone is quick to point out how slow the AOR, Yupi, etc. are compared to the Uniden/RS but fail to mention that the Uniden/RS are segmented coverage with no HF, bandscope, alpha-tagging, computer control (for the most part), etc.

> The manufacturers' advertisements for

> or Alinco scanner with shortwave performance to match an old
> Sony 2010 or Magnavox D2935 with the standard whip antenna.

From my point of view that is clearly understood, but many still think they should be equivalent and are therefore defective or unworthy when they turn out not to be. This is the very problem I am pointing out with my comments.

From all I have seen, there are a large portion who think $500-$600 will get them everything they will ever need, which is simply not true. Such a wide-coverage radio is a compromise and best used to get your feet wet with the HF portion of the spectrum. You can enjoy quite a bit of it with such a radio but

if you want to get serious, you'll need a serious radio ($1K-$2K).

Thanks for your thoughts!

Strong Signals,
Rich Wells N2MCA

You miss the point completely. A catalog is a promotional vehicle for Radio Shack to sell it's merchandise. Why should the customer have to PAY for their sales literature? Do we pay for their radio commercials? TV commercials? Newspaper ads? If the cost of the catalog is an issue, they should do what they have done in years past...and what other companies do...by offering an equal or better merchandise credit against the price of the catalog. But $2.95 with no credit? Screw that! And whatever happened to my free "battery of the month" card?

And "if" you would have read my original message, I mentioned that if you want to do the COP thing then take the classes and become trained. I never have downed the "trained" person/HAM who wants to volunteer his time. The underlinging thing here is "TRAINING"..... The problem is most of the HAMs "don't" want to do the training, just want to get involved. Must be an ego thing.

Most of the HAMs I know sit through a 4 hour video and talk session on storm spotting and now they think they are experts. That is one of the reasons that we expect more than one report of a tornado before we confirm it to the weather bureau. If you want to get involved get the "Training". I sure that the members of the sheriff's posse have the training to be out there helping.

I am a HAM and also a reserve deputy sheriff. The process for certification to become a deputy is to do 560 hours of classroom and physical training, pass the state police officers test and when accepted to a department work with a training officer before being able to ride alone. Also to keep certification you need to satisfy a minium 20 hours of training every year. Of the 24 reserves on the sheriff's department I am on only 3 have HAM licenses. There being about over 1,000 Hams in the area I am not surprised that there are not more. They all wantabee but don't want to go through the "training".

Again what I am saying if you want to be a COP then get the training and volunteer. Don't go out and get a radio that is capable of getting on the police frequencies and a look alike police car so that you want everyone to think you are a police officer.

Even if you are a HAM you would be illegal.

Please read part 27.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not available.

I do not see anything where a ham can operate on a police frequency. They are
stating "at his disposal". If you are not licensed for that frequency then
you do not have that at you disposal. I talked to an FCC engineer to explain
this part to me and he said that if you are not licensed to operate legally on
those frequencies then you cannot transmit on them. This only pertains to
amateur frequencies and different types of transmissions.

You apparently don't get it. No one is worried about the lousy three bucks.
It's the prinicple. If someone wants to do business with you, they should at
least make some attempt to make it easy as well as show their appreciation for
your patronage. I don't see that as being a particular tricky concept to grasp,
do you?

Showing your ignorance?

It's been documented that there are black helo's. They belong to Delta Force out of Fort Bragg. They run around all over the country, staging mock rescues etc.

They are famous for their money men who payoff owners of the property they have damaged. (they use live ammo and explosives).

PS They are exempt from Posse Comitatus, by presidential directive, and that alone should scare you paranoid types.

Huh? You sound like a real *first class* asshole!

Assuming the Communications Act of 1934 is still in effect, an emergency transmission takes priority over your police or sheriff department's "rules & regulations."

You are the jerk with an ego. Why would a citizen, who *wants* to save a life have to sit through 560 hours of classroom and physical training? I don't plan on capturing the armed suspect -- just reporting it so the *real* police (and not a RESERVE deputy) like you, so they can apprehend the suspect.

After reading your message I would call you if my cat were standed in a tree!

You appear to be a troll, as well as an idiot.

3596. Auction ending today! New Trunktracker scanner!

Newsgroup: rec.radio.scanner
Date: 1998-08-24 00:00:00 UTC
From: danielle@unidirect.com
Message-ID: <6rrvih$t71$1@nnrp1.dejanews.com>
Source record: 146618

Hi Group,

I have an auction ending today on a PRO-90. The scanner is only 2 months old.
Barely used. It is a 300 channel, 800 MHz, Trunktracker scanner.
My area does not have any trunk systems so most of the functionality is being
wasted by me. It comes in original box with 1 nicad battery, charger, flexible
antenna, and 2 manuals (one is a users guide and the other is a common freq's
guide).
It is in perfect condition! A good buy for someone wanting to upgrade
to the new trunktracking technology.
Here is a link to my auction:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=26696658

Happy bidding!
Danielle

Mina:

You've got a couple things incorrect and I would like to correct them.

Cordless phones operate at about 6.5 meters, and the frequencies are from
43.72 to 46.97 MHz. The one-sided conversation (listening to only the
handset) frequencies are in the 48 to 49.99 range.

Also, cordless phones can sometimes be picked up for several blocks as long
as you've got an outdoor antenna.

The usual test fee is $6.35, but the license itself is free. Try
http://www.arrl.org/ for information on testing and other information in
your area.

The equipment on the other hand is very costly. If you're going to be on the
HF bands, look to spend at least $1000 (and yes, that's cheap) for an
average HF rig.

If you're looking to get into only VHF/UHF, you'll be looking at about
$300-500 for an average dual-band handheld, or $500+ for a [dual-band]
mobile unit.

I got my license 2 months ago, and it really has been fun so far. I now have
expanded myself from a j-pole and being only on VHF to now getting a
dual-band Yaesu and a 2 meter beam and rotor. All in two months!

Good luck, and study hard! I recommend "Now You're Talking" from Radio Shack
and/or a local library.

An outdoor antenna (or in your attic) would probably help but that depends on your location, how high you mount it, what surrounds you and so on. But assuming that you're getting decent reception with the stock antenna, then you should give it a try. I recommend the Scantenna (about $40). Grove sells it, as does Radio Shack (not sure what they call theirs). If the freqs you want to listen to are only a "little farther" you might want to try replacing the stock antenna with a whip, like the $10 cheapie that Radio Shack sells, which can be "tuned" to whatever freqs you want to listen to.

Well, instead of calling 911, try 0 for the operator, inform her what
city you're in, and you'll be connected to the appropriate city.
I personally leave all the local Public Safetly agencies programmed in
my phone....
However, then you deal with the occasional idiot dispatcher. Just last
week, saw an injury accident occur on the way home, called that city's
dispatch direct, told them....and had to convince the dispatcher it
WAS withing their city limits......
Still prefer the cell over other means......but always nice to have a
2-way for backup.

Without respect to anyone's personal opinion, the Communications Act specifies that in a dire emergency (and that is defined as an immediate danger to life and property - the classical use of "MAYDAY" or sending an SOS in CW) the normal rules are suspended so that radio equipment may be used to obtain help.

>>The Communications Act of 1934 overides *any* local or state law.

True. Be prepared to defend that posture in court if you DO use something you normally shouldn't despite your intentions or immediacy of need.

>You obviously have 'selective memory'. The FCC says you can NOT use a
>radio system that you are not licensed to use...

Under normal circumstances- unless you are in immediate danger of losing your life or property.

>... If you have a Ham license,
>you can use ANY _Ham_freq, even one you do NOT have privileges for, but as
>a Ham, you can NOT use a Police or Fire Department radio system and expect
>to not have SOMEthing done, at the least having your radio confiscated. If
>you fight THAT, you'll probably face other charges.

The charges you'd face are those of posessing equipment that has been illegally modified to transmit out of band (by the Commission) and/ or interfering with the duties of an official (by the local entity). NOT breaking part 97. The rules do not specify what frequencies and modes you can and cannot use.

The premise is that you SHOULD NOT have equipment capable of transmitting on these frequencies unless you have written authorization from the licensee, and then you must stay on the channels allowed on the license. Even so, a modified ham radio is not type accepted for use outside of CAP and MARS and should never be used "out of band" where it is illegal. Now here's a controversial parallel: let's say you buy a semi-automatic rifle, which is legal where you are. For whatever reason you modify it into an automatic, it's illegal. Similar (with a different impact, of course).

I can't underscore this enough - - It is still NOT A GOOD IDEA to go where you are not expected (even if you are a volunteer with a type accepted radio, like a GM300, etc.)!!!

Get local people together to listen to certain ham frequencies (146.52, 52.525, 446.0, etc.), 2182 kHz HF maritime calling/ distress, 121.5 aviation distress or 156.8 MHz maritime VHF calling/ distress, start a program with police or park rangers, like REACT so that you have a partnership where they know what you do and can call on you if they need your help (that happens sometimes) and you know who to call directly (NOT on the radio!) if you hear a distress message, but don't go where you are not expected unless you are alone and are most certain you will die if you can't get help (that's why this exemption exists- not to call in disabled vehicles or suspicious persons, etc.)!!! Many hams have tested the Communications Act of 1934 and many local/ state judges believe they are empowered to administer this law. You'll lose your equipment and, if your lawyer is not skilled at communications law (who is except an ARRL volunteer counsel or a "wireless communications raider"?), you may be locked up for a while until you appeal in Federal court.

There was an unfortunate case in NJ where a young man who is a ham was suspected of interfering with police operations on their frequency. While he ultimately proved this was not the case in court, his reputation was drawn through the mud, he was deprived of his equipment, he ran up a LARGE amount of legal fees and he probably has a damaged view of his local authorities because of a misunderstanding.

All I can say is, "Think before you talk." Proving you are right will cost you time, money and create a lot of undue animosity.

Steve (KA2AYR)

BTW: What do you all think about a system where a VHF or UHF ham radio can be placed in a PSAP, be the responsibility of a licensed amateur and is normally muted and disabled but opens up and allows a dispatcher to communicate if someone dials 9-1-1 on their keypad? Such thing could be sponsored by the local amateur club and this SHOULD allow direct access to emergency communications without ever making an issue of coming up on unauthorized frequencies???

3619. Re: SONY SCANNERS !!!! ANY INFO ???

I was impressed with the performance of the SONY SC1PC I
tested for August 1998 Monitoring Times magazine.

I measured the sensitivity across the spectrum
and the results are plotted graphically in the review.

Unlike the IC-R10, AOR AR8200, and DJ-X10T, the SONY SC1PC
comes with the cable and software you need
for computer control. Too, it is supplied with
a PerCon CDROM containing millions of FCC license records.

The SC1PC keystroke sequences are complex, like the other models
mentioned above. It's an attractive package which actually
performs.

The input frequency should be 465.2325. The repeater input on UHF is always 5 Mhz higher than the output.

The frequency 460.2325 is not a frequency that fits the spacing of that band. The nearest valid frequency is 460.225 or 460.2375. All the frequencies with four digits to the right of the decimal are allocated to low power and are unlikely to utilize repeaters anyway.

A friend passed away about a week ago, and his family has requested help in disposing of some of the electronics gear he left behind.

Along with the usual sell-by-the-pound "junque" we all accumulate, there were a couple of nice scanners that ought to be worth something.

The problem, of course, is finding the right price - one that an interested buyer would be willing to pay, but that won't amount to giving the gear away.

Any help in determining the "right price" for the following two items will be greatly appreciated. Both units are in good-to-very good condition, with cables, documentation, etc., and original boxes. All of the stuff has been verified as being in working order.

1. Icom R-100C wideband receiver/scanner
2. Radio Shack PRO-2035 scanner

Thanks for any input. Please feel free to post comments here, but I would appreciate copy by e-mail. If anyone knows of a good reference source for used-gear pricing, a pointer to it would also be helpful.

Bob

You will have a hard time providing a citation of the law or regulation under which you could be charged for merely POSSESSING such equipment. There is no such law in the USA, and legal problems could only occur if possession of such equipment was supporting evidence in a case charging illegal usage.

Every ham rig that can be modified for MARS/CAP is capable of illegally transmitting on non-ARS, -MARS, or -CAP frequencies. Can the Radio Posse round up all the hams with MARS/CAP mods and claim they own an illegally modified radio?? Can a mis-guided ham who, using a radio legally modified for MARS, transmits on a public safety frequency then be charged under some law for simple possession of an illegally modified radio? NO, because there are NO such laws, save against those engaged in the MANUFACTURE of such equipment under certain circumstances.

Why did you make this claim???

> The premise is that you SHOULD NOT have equipment capable of
> transmitting on these frequencies...

Whose premise, since there is no law prohibiting this??

The capabilities that I choose to enable or add on to my personal-use radio equipment is my concern alone. However, I agree it would be gross stupidity to ever, ever use such equipment on frequencies where it is not welcome. I think it is evident that the ham who did so in San Diego County, CA, did so needlessly, almost as if he were waiting for an excuse to try it out. And public safety frequencies are not the place for over-enthusiatic radio operators to crowd and confuse with their "emergency" reports of highway fenderbenders et al.

OTOH, a poll of equipment used by MANY MANY public safety volunteer organizations (fire departments, rescue squads, etc.) would reveal a large amount of ham equipment modified for use on public safety channels.
Let's hope no one starts a self-righteous crusade against this until it is shown that a problem is actually resulting from such "gray-area" usage.

Regards,
Mike-M

Some equipment is operated by a "tone burst." This is usually found in cheaper equipment. Instead of transmitting a continuous sub-audible tone, it transmits a tone burst which releases the squelch on the radio. The radio has a timer circuit that resets the tone burst feature a few seconds after the transmission stops. It would be difficult to tell what tone trips the squelch since it is just a burst. Since this feature is not as efficient as a standard PL tone it is not commonly found on commercial equipment. I noticed it on some of RadioShack's FRS radios.

Oh, my yes. You read and hear about it all the time. The PS frequencies are really under siege by SOMEBOBY transmitting illegally on their frequencies at every hour of the day. It's a real public nuisance! We need a Federal task force to stamp this out. We need to allow random searches for such equipment. You can't listen to a scanner for more than a couple of minutes ANYWHERE without noticing how commonly this explosive threat to democratic representative government occurs.

NOT.

If all one has to worry about is whether or not some vile "unauthorized" vermin is lurking with, God help us, the POTENTIAL to key up on the local PD frequencies, I'd say life is pretty sweet.

Actually, the reasons SOME agencies have gone to encryption are:
(1) Too much money in their budget for non-essential techno-gimmicks, AND
(2) [This is IT!] the natural desire of people everywhere not to have anyone monitoring their actions.

Anyone claiming "spurious interference" by modified ham rigs as a reason for encryption would be, er, uninformed or deceptive in every conceivable way.

Not necessarily true - scanner laws in mobile use vary from state to state - check out something like Truckers News to get the latest laws regarding mobile use of scanners by state. BASE use is a different story, but there are DEFINITE laws regarding the use of scanners in a vehicle (though I'm sure they selectively enforce them, I've had similar experiences).

3647. AR8000-AR8200 TrueType Fonts - WHERE?

Newsgroup: rec.radio.scanner
Date: 1998-08-25 00:00:00 UTC
From: "Stephen H. Fischer" <sfischer1@mindspring.com>
Message-ID: <6s095c$98j$1@camel15.mindspring.com>
Source record: 146312

Hello all:

I am looking for a font to use in Windows 9x Programs
that matches the characters in the AR8000/AR8200 displays.

These characters are used by devices other than the AOR Radios.

A data sheet for the Samsung KS0066 LCD Controller is included
in the Serial LCD Backpack Display Modules on
ftp://ftp.jameco.com/jameco/data_sheets-displays/133129p1.gif
which shows all the characters.

This data sheet CORRECTLY shows ALL the characters in the AR8000,
which the various AR8000 web pages do NOT!

I have intermittently worked on a raster font with these characters,
but what I really want is a MONO SPACED true type font the has smoothly
scaled
characters for the English alphabet and block increasing
characters for the icons (Katakana Characters).

Thanks for your support.

> supporting the communication parameters that interest to me.
> Is there any software I can use ?. In alternative, a TNC could work?
> Thanks in advances

Try a "packet modem" TNC, particularly the "Baycomm" type.

They are based on a "modem" chip (TI TCM3105) that is compatible
with the modem FSK specs. By jumpering a few pins, you can change
the receive tone pairs. Search for "Baycomm modem schematic".
Note that the Baycomm modem data is sent through the handshaking
pins, and not the RX/TX pins of the serial interface. You will
need to rewire the connector.

Or, look for two shareware programs called "Hamcomm" and
"Radioraft". They can be set for custom mark-space freqs, shifts
and baudrates. They both require the "Hamcomm" interface - the
same one used for MDT, Trunker, POSCAG, etc, etc. The circuit is
included in the doc's.

Good Luck!

Cheers,
Paul Grohe

I am a volunteer fire department member as well as an EMT and a fire policeman. In my training, both as an EMT and fire police, I have always been told that, IN AN EMERGENCY, any means of communication is acceptable, whether it be a ham radio, a police handheld or otherwise. (No, I am not a licensed ham.)

The RS store I deal with here in Canada has come up with a new,
innovative, unheard of
idea to control the distribution of catalogues. They keep them
behind the counter and you
have to ask the salesperson if you want one.

This way, only people who REALLY want one will ask. And those who
ask will receive it
free of charge. And I am pretty lucky... the staff in the local
store is relatively knowledgeable.

BZZZZTT!! Wrong answer, but you're invited to come back later and play
"I'm An Idiot!"

The trunking systems were built and designed for EFFICIENCY. Many
repeaters are required for the systems to work properly, and many have
been disasters!

Another fantastic feature is the ability to monitor and track those
officers who enjoy sitting in donut shops all night, or taking naps.
They can see if your car is moving.

But, try again!

Then Why is it that the Law also states that the Air Waves are free air wave. It isn't illegal to listen just to Rebroadcast the Transmission with out written consent. And if you think it is Illegal to Rebroadcast then why can you listen to NYPD, LAPD and others VIA broadcast.com? I know one thing and That is I have been pulled over by Police and Even Had one with me in my car while my Scanner was running and They said Nothing. As long as You don't rebroadcast. And the Law You All Refer to is as flexible as Rubber. Because if that applied then a Police officer OFF duty in his own Private veh. can't have a Scanner but they do. So the law varies, And if you get pulled over for it and ticketed then you have a cop with nothing better to do. Shoot I even had a Cop standing by my car while at a Restaurant listen to my scanner so he could hear what he sounded like over the radio. So just Don't worry about it.

Thanks

This is all very true. In an emergency, all bets are off. You nay use whatever means are at hand and necessary to send a distress or emergency message.

There are a few wrinkles in this concept though... I am thinking of a case in CA a few years back... QST printed notice of this and I think a couple of updates. It seems that a ham had his HT programmed for a couple of local law enforcement channels, and got into some jam off in the bush... Maybe it was a broken leg, I don't remember. Anyway, I guess he called on a ham freq. or two, and then tried a police freq.. Well, a bunch of people got their noses out of joint over this, and I will not take sides on whether he was right or wrong to do this, but the feds messed with this guy rather badly, and it was touch and go on whether he would have to pay some bucks and maybe lose his license. The position of the FCC seems to have been that programming his rig for police frequencies in the first place constituted intent to use those freqs at a later date. I think they did take his HT. Maybe somebody remembers that article better than I do and can refresh our memories. Anyway, I think the assumption should be that you will get hassled badly for operating on public safety systems without authorization, emergency or not, and if the emergency warrants you accepting the fact that you will get hassled, then of course you will use those freqs. If your emergency involves life and death, obviously a fine and losing your license are pretty small potatoes, and you will use the freq. since it is the lesser of two evils. If the emergency is something like you ran out of gas on the highway, consider the gravity of the situation you are in versus the gravity of the situation you might be in if you use an unauthorized freq.. Weigh one against the other. Because whether you consider it an emergency or not, somebody else might not, and especially if Uncle Charley points out that you had privileges on other usable freqs, you COULD INDEED find yourself in a bad situation. So, assume the worst will come out of your emergency transmission, weigh it against the emergency, and do what you gotta do knowing and anticipating the possible consequences both to yourself and to legal users of the system and the people who depend on them.

"That's all I got to say about THAT."

Negative. I bought one, with the antenna they recommend (but isn't in
the ads) and it couldn't lock on a 2 meter rig 5 ft. from the antenna
or a 49MHz phone just inches away. I returned it. Unfortunately,
the name "TechToyz" says it all. A shame...

> I'm looking for a relatively inexpensive counter for snagging

> do it for me?

I got the Scout instead, which is very, very good. It's 3 times the
price but a lot more than 3 times the performance. Get it if you can.

Excuse me!! You need to read a little better. Did you flunk English comp.
No where did it say anything about trunking. I will say it again "agencies
are going digital encripted transmissions" to keep no nothings like yourself
off of these systems.

Think you need to go back to basic English class and get a life.

>The trunking systems were built and designed for EFFICIENCY. Many

Unfortunately hams think they can do anything just because they have a
"ham" license. Now ask the FCC and they will tell you that it does not mean
that you can transmit on a communications system that you do not have
authority or a license. Re-read part 97.403 and ask an FCC field engineer.

It's obvious we agree on the problem. Like you, I don't advocate violence. There is no way that violence will counter the forces of those with an intertest to keep the status quo. I advocate education. I have the feeling you've been aware of the problems of this counrty for years and in the past there were very few who would even want to see what you saw. You also didn't have the medium to express the problem at any length. I believe you gave up hope.

I feel the time is right for enlightening those that can be beyond what they get in the corporate owned mass media. The internet..and yes this news group can serve as a vehicle if the issue is right (government control of scanners etc..).

The one thing we have to get through our heads is that this is a global problem...not just limited to the US. SInce the problem is global in nature, the answer has to be global in nature. This means we have to put aside petty differences and prejudices if we are to overcome this eventual oppression.

We have to quit resenting mexicans because OUR corporations move to Mexico using OUR tax dollars for the move. They then polute Mexico and under pay their workers. We have to quit resenting Asians who are being brought into our country in droves to compete for high tech jobs. It's out corporations who have bent the laws so they can achieve these ends and get cheaper labor and even greater profits.
Putting aside prejudices is hard...I'm very prejudiced, but I'm also smart enough to know that most of these prejudices are bullshit and were created in fear. In the long run they will never accomplish anything. I challenege them. That's the best I can do...just take that one instant and not act on them..not repeat them. That takes tremendous effort somedays. I'm definately no saint.

As far as the alternatives, I have a survival guide, bought specifically for this purpose. I've contemplated getting a permit to own a weapon. I am not for gun control...I'll give up my right to own one when the government/corporations give up theirs.

By the way, the security forces in the US..Wells Fargo, Pinkerton etc.. are the largest armed forces in the world. They work for corporations. If there were civil unrest, which side of the line do you think the majority of those guards would be today... how about if they were educated? Big difference...that's why I advocate being out in the open with this. It's the only way peole will get to see and

hear something other than Seinfeld, football, Jenny Jones or the NY
Times.

Peace

Roy

>ranging from 40 to 100 bucks..

Power amplifiers work. If your problem is that you don't have enough
power to reach a distant repeater, a power amplifier can make the
difference. But the extra power alone won't turn a handheld into
a mobile radio.

To get a rough equivalent of a mobile rig, a handheld needs to be
supplemented with power amplifier, better input filtering (to reject
intermod when you connect it to a more efficient antenna), and an
external audio amplifier and speaker. You probably want to add an
external mike as well. You *can* do all this, and then it will work
quite well - but you've just filled up a lot of space with boxes
and wires connecting them. And you've spent more than a mobile
radio would have cost in the first place.

I guess what I'm saying is, if all you really need is more power,
nothing else, just add the amplifier. But if you think you need
some of the other features of a mobile radio, it's probably better
to save your dollars towards buying that instead.

Dave

I've found the proper pin on the IC for NFM baseband audio but understand the center pin on the CTCSS card mount on the three pin side has a buffered output that will work. My question is whether or not the cap and resistor are required as would be if directly tapping the pin on the IC?

Anyone know for sure?

Thanks!

Charles

Hi,

Now we are agree that saving lives is more important than the law.
Anybody care to tell me how I can transmit on the Police frequencies?
According to PerCon, my local frequency is 460.2325. I can receive
their conversation, but they cannot hear me on my hand held portable
radio.

What's the offset on their UHF freq? Tone?

thanks

Do not reply e-mail. I have an "ani-spam" address

I may be wrong, but I doubt that those talkies transmit in the 30 MHz range.
Both of my older scanners receive MANY images in this range, esp. of police
in the 46x band.

Try the 151-153, and/or the 461 to 465 ranges.

Regarding using Ham radio to call on police freqs:
I recall a case in Ct maybe 15 years ago when a ham, also a radio news broacaster found someone in distress (drowning I believe) and placed an emergency call on the police freq. I believe as a result the person was saved (I may be wrong about) but then the feds prosecuted him for illegal transmission.

DOn't recall if he was convicted.

You Don't. Unless your a Police officer or emergency official you are not allowed to transmit on their freq... You can get arrested and in trouble. It is not illegal to listen but it is to transmit on the freq... that is not registered to you. Sorry but that is life

"Inspecktah" <x_9-13-96_x@rocketmail.com> asked:
> ... what are the cell phone freq.? i.e. 800mhz-???mhz?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

This certainly was a "strange" exchange of mis-information. Item one,
the police/commercial user's will ALL be using a PL (private line), tone
guard, CTCSS or whatever you want to call it. That mean's unless you
know the subaudible tone, you can't be heard through the system.

In any real emergency any agency/citizen can use whatever means is
at their disposal to summon help. That in itself does not give joe
or jane ham authorization to use a police radio frequency. I think a
good case of common sense would rule the day here.

Don't know about Hong Kong, but I believe these frequencies are
standard in North America... although some new wireless phones use
900+mhz , the majority you will be able to hunt by setting your
scanner's lower limit to 46.0mhz and highest to 47mhz and let it
search.

Now, the key is LPU (Low Power Unit) which means you won't be able to
get anything fancy if you're not around the block or closer.

Also, although sometimes stronger, you can get 1 side of the
conversation by scanning between 49.mhz and 50mhz

Question :

This weekend I was involved in a big convention, and the
security staff were given Motorola HT1000 walkie-talkies. I don't
know any other specs for the walkie talkies, but it covered
crisp-clear over 5 kilometers.

Anyways, I got my scanner, removed the antenna, got close to
one of the talkies, transmit, and scanned for the frequencies.

My scanner would find the frequency, yet if the scanner moved
over 2 meters away from the transmitting talkie, the signal would grow
too weak. I guessed this was an image and kept searching, again, I
find another frequncy but is only received within 2 meters (yes, I do
put the antenna back before moving the scanner away)... All the
frequencies I found were around the 30Mhz range, give or take.. I got
around 8 to 10 of them...

So, my question is.. in a situation like that, what is the
best way to find the right frequency ? should I have kept searching ?
should I search the whole 32-1000 range ? any tips ???

Any response would be greatly appreciated. :) thx a lot in
advance.

Er...you probably don't realise that this is a guy who has to work for a living, and when he spends so much time developing an application that lets YOU intercept other people's pager messages, then I think asking for some reward after a while is not out of order.
I have written an application for downloading data from a Scout or Xplorer, and it's freeware. Sometime soon, I will release a 'pay' version, but simply to cover my costs, and to reward my time.
I have put a LOT of hours into the freeware version, and I have payed $300 for some custom controls so as to make the program much better, and you expect me to just give it to you for free?
You are lucky so many people write freeware in good will...
I will continue, however, to make the freeware version available, it's just that the 'pro' version will have extra features.

Just so that you know, Visual Basic or Visual C++ costs around $500 (the cheapest and most basic version, it can go up to $1200 for the Enterprise version). I would have to 'sell' 10 copies of the software at $50 each just to cover the cost of the compiler!!!

Regards, and please don't complain so much about what you know so little...

Mike

If you disassemble the Radio Shack unit, you can see the Saitek name and logo
on the circuit cards.

3706. Re: Anybody use Opto Scout with ICOM R-7100?

Newsgroup: rec.radio.scanner
Date: 1998-08-25 00:00:00 UTC
From: Miguel Puchol <mpuchol@eurohubner.com>
Message-ID: <6rt2c1hra1@talia.mad.ibernet.es>
Source record: 146433

James,

At present, the Scout can tune an AR8000 scanner, as it sends a standard command string using the AOR's protocol. This has nothing to do with CI-V. As you may know, you can change the mode of your Scout by moving the third button up or down during the display self-test.
The modes are AR8000, for reaction tuning an AOR scanner, or CI-V, which is used to connect and download frequencies to a PC. It is confusing, as CI-V is the protocol used for PC download, but it's not used for reaction tuning. I am working on a program which will take the reaction tune from the Scout via one PC serial port, and send the modified tuning string to any receiver on the second serial port.

Best regards,

Mike Puchol

Visit http://www.eurohubner.com/mike/soft_otto.html to find out about Otto, the Windows 32-bit data management utility for your Xplorer or Scout.

I picked up one today for no charge. I know the manager pretty well
and he told me that one of the reasons that they are supposed
to charge for the catalogs is to prevent kids (who presumably
don't spend much if anything) from grabbing 6 or 8 of them
from the box and leaving.

> situations.

True enough for a triangulation where the "hunters" use two directional antennas spread far apart, aim them back and forth looking for the strongest beampaths, and plot it on a map, X marks the spot. This does indeed work well regardless of wheter the "prey's" antenna is directional.

However, cell site antennas aren't directional. The method here is to just take signal strength readings from 2 or preferably 3 cell sites. This works because of the assumption that the phones antenna is putting out signal equally in all directions (more or less), allowing them (actually the software in their computer) to estimate the phones location based on the signal strength data alone. Hence, a narrow beam antenna aimed at a particular site makes it appear as if you are using the phone right under their antenna :)

The freq you guys are listening to is 940.2250 MHz. Honest. Its Skytel's 50 kHz wide nationwide Narrowband PCS (NPCS) channel paired with 901.2250 MHz.
They got the license on a "Pioneer's Preference" back in '93 for free and now the FCC is billing them $33 million because the Federal District Court in D.C. upheld subsequent changes Congress made to the Communications Act that took away the free ride. Not surprising.
If you look at the signal on a spectrum analyzer you can see 4 distinct subcarriers which accounts for the confusing responses from a typical scanner.

3724. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-08-25 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35e23268.25879800@news.iaw.on.ca>
Source record: 146451

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

I turned on my unit today after two years of non use and can't get anything.
It has no 800mhz. Bands read from 29 to 512.

All I can get is weather.

Is it obsolete or broken experts?

thanks
rick

Several People have posted some really good points:

1. The Personal Judgement of What An "EMERGECY" really is is a biggie.
Examples: A "MINOR" Traffic Crash, SEVERE Weather
People wanna call the weather service when its raining hard in my area!!

2. What are the chances of being able to contact help via a Government Radio System (of which you have NO immediate Authorization to use), where there are no others available?? Very Very Small

3. And if you do decide to summon help on a Goverment System on which you have to authorization, Be aware: YOUR ON YOUR OWN!!
DONT EXPECT the FCC, ARRL, etc, etc, etc, etc, to stand up for you..
(AS SEEN IN PAST INCIDENTS, the FCC's not gonna back you!!!)

Dont flash one of those police badges stamped "HAM OPERATOR"
And be forgiven on site!! (Dont laugh, ive seen them...)

Staying in your licensed band limits is the best answer...

Just my 2 cents

Comments Welcomed

I went to 2 radio shacks today(the first was out of stock of what I needed). In the first place they said that after a week, they will be giving them away for free. The second place just gave it to me for free. So, at least 2 places here on Long Island are not charging.

From my understanding, only 30 can be active, even though more may be
licensed by the user. I had this same question, too and was told to
program 'em in conventional scanning mode to find the control and
"live" (used) channels. Then take those freqs and program them in
trunk tracking mode.

Hope this helps.

In may I was arrested for having radios capable of transmitting on public safety Trunked system.

When I was arrested he(the Detective) charged me with 200 FELONY counts of Alt. A ELECTRONIC SERIAL #. and 200 counts of FELONY POSSESSION OF CLONING DEVICES.
Where he got the numbers I have no clue but this is what he told me
I had about 14 different Trunked systems programmed in my CONVERTED MTS2000(I'll get back to the converted part) and that the county system has around 200 Freq.. on all the systems.He thinks that I had all 200 Freq. programmed in it.Let me think, any one that programs with RSS knows that there is only 4 freq max that are put into each trunked system for the control channels.So he needs to learn to add.
Now the story of 200 felony counts of altering electronic serial # who knows.I think that he was tring to make it harder to BAIL out of jail.

I had a mtx8000 that the controler board failed so i took a mts2000 controler and placed it onto the mtx8000 so that is how i had a converted mts2000.

So the serial number did match when they read the radio with the serial number on the back of the radio.

Then the kicker is when they went to my house and took.
2 computers
5 spectra's (800)mhz
bc895xlt
bc235xlt
ht-600
GE rangr low-band with extender
my glock-17 my bullet proof vest
My RIB and cables(and if I had a RIB and CABLES you know what else i had,lets say that i didnt have to pay yo get my trunked radios programmed.
Well i would say over $12,000 worth of stuff.

So I posted a $15,000 bail and was out that night. I Was set a court date went to it and the keep telling me to come back that the DA hasn't filled any charges yet.So I called up the DET. and asked what is going on with my case and he says that he is waiting for MOTOROLA(that's what really SCARES me)
We'll see what happens.

You might ask "How did they get the radio to begin with?" I was walking buy a police officer and he heard the radio and the watch commander said to take the radio.I asked him what law did I break and he said I violated a FCC law. Well what was is it there is no California Law that I broke.Under what

authority do they have to enforce C.F.R title 47. NONE
Do they enforce C.F.R title 12 NO,can they NO. So what makes them so special
to be able to enforce 47.Well FCC says that they cant.

Source record: 146464

Perhaps some others on this NG can add to this....Augusta County Va has invested $2 million in a new UHF conventional radio system with new equipment at three sites. Now that it has all been built, they have asked FCC for permission
to test. The National Radio Astronomy Observatory in neighbouring Green Bank, W.Va., has filed an objection with the commission claiming that testing or any use
of the system will harm the National Radio Quiet Zone, established in 1958 to protect the activities of the NRAO, which is apparently to listen in case any moon men wish to contact us. One Virginia congressman is threatening to amend the 1958 legislation to prohibit the NRQZ from affecting "needed public safety systems." Any other info out there?

>reward after a while is not out of order.

Go back and read his original post. You apparently missed the entire point. The progam was offered as freeware. The newest version, which is shareware, trashes the existing freeware program. It's a lame attempt to take back the free version that you gave been using and forces you to buy the updated version. You may consider that ethical, but I sure as hell don't.

>I have put a LOT of hours into the freeware version, and I have payed $300
>for some custom controls so as to make the program much better, and you

Perhaps it is because he spells it Wiggie. Take my word for it: The info is there for people who are willing to look. Here is only one comment of many piece that Wiggie and others have posted on computer-controlled scanning quite recently:

On 2 Aug 1998 06:25:03 GMT, chuckiex@ibm.net (Charles McCallister) wrote:

>Somewhat begs the question: Can the Opto program the scanner?
>
>Charles

Charles-
No the OS535 cannot program the scanner. The scanner's CPU and memory chips reside on the CPU/Logic PCB. Their interlink between them is on the pcb. Therefore to program the channels into the scanner, you either have to go through the CPU or be able to tap between the CPU and the memory chips.
The OS535 goes between the CPU/Logic PCB and the RF/Linear PCB. Its placement only deals with data connections between the CPU and the RF/Linear board such as the codes to control the PLL, switching of the BPFs, squelch detect, keypad beep, mute control, zeromatic, sound squelch, scan stop, and various 5V and 8V supplies for the ICs.
If you wanted to tap the traces between the CPU and memory chips...you could, but I count 24 pins on the CPU allocated for memory I/Os. With this model, and similar models, that is when it is best to go with a PROgramit interface. It has 12 connections on the Pro-2035/2042 models to the keyboard PCB. This way the data is entered into the memory chips via the CPU.
I hope this helps more than it confuses.

Wiggie

From what I am reading here in this news group I now know why most public agencies are going to digital encripted transmissions. It is to keep people who do not belong on their radio systems.

What did you all do before you owned that radio capable of getting on the public service frequencies? Do the same.

I would agree with you that the ﷺfreeﷺ headphones sounds like a money maker for them. Elsewhere someone else expressed the opinion that the leather case was decent.

With regards to your complaint about the company charging more for US Postal Mail, which is the only option when using a PO Box, versus UPS, Emery, FedEx or any other shipper. UPS et al can offer discounts to shippers which USPS does not. Additionally, when an operation is ﷺset upﷺ to ship via UPS or one of the others, doing parcel post is less efficient, more time consuming and may even require an individual trip to the post office. That is why they charge more for Parcel Post. It is not greed or profit making, it is practicality and efficiency.

I have no interest in CEI, I just wanted to set the record straight. I felt your response was far to critical of them without giving thought to the reasons behind their modus operandi

drdeleon@pcsrock.com wrote in message ...

Most Cellular towers do not depend on a phone line at that site. They
use microwave between towers, back to a MTSO. That is where the
phone lines come in.

In a message labeled: HELP!!!!!

Ryan Whittleton wrote...

>I would like some info on the BC3000xlt, like what you think of it?

Ryan:

The subject heading of "HELP" implies that you are in distress or dire need of immediate assistance. It causes most people to take time to read your message, of which they may have no particular interest or knowledge.

Might I suggest that you would receive far better input if your subject header was more germane to your needs and read something along the lines of:

"Seeking info on BC3000xlt"

...or the like?

You can also see many post on the BC3000 by visiting the Newsgroup archives at:

I take it you mean the discriminator tap? If so, check this URL:
http://www.optoelectronics.com/3/catalog/dc/dc_fd.htm

The mod info is on the bottom of this page. If all you want is the discriminator, you do not need to perform the connection for the "squelch detect"... only the gnd and disc. One other note, you should use a coupling capacitor on the discriminator connection.

> de KA2AYR

FYI. Los Angeles Sheriff has maintained a repeater system on 2 meters, 220 and I think 440 for a number of years staffed with a ham to relay highway traffic and other emergency calls to the sheriffs radio room next door. It is all part of the RACES effort in LA County. Nest best thing to a PSAP.

My local club maintains a 220, 440, 1296 phone patch with dial up access to the local PSAP but yes, you do need to know what freq, tone and procedure.

My personal preferrence is my unactivated cell phone. Got it for free when a buddy went digital and by Calif. state law all cell phones, active or not, must dial 911 for free. All it costs me is the juice to keep it charged. <G>

If you don't have permission, and you can't figure out how, leave it
alone,
even if you had the info, you don't key up on a pd freq. to test it!
you could interfering with a life or death situation.

>Thanks!

The signals are not images. The Pro34 was made and sold prior
to the current restrictions on coverage. The 800-900MHz scan channels
are not all in line with assigned cell channels so some are never
"on frequency".
I sure hope you mean the _DC_ power jack. Pumping 9V AC into
the 34 would certainly have an adverse effect on all of its
operational features. There is both a DC power input jack and below
it a DC charging power input jack for charging internal NiCDs
if used.

Sounds like something got pulled off, pulled out or broken off
in the process.

First of all, if we're seeing someone getting shot, raped, or robbed, we are most likely near a phone. BTW: Other people constitute one of the means of normal communication, so if there was someone else around when you transmitted on a public safety frequency, you can be fined and jailed.

I also *didn't* say we shouldn't, I only said it will probably get us into a lot of trouble. Even though we WERE saving a life, being fined and jailed (and having equipment confiscated) is not as worthy to my cause of helping as finding a real telephone or someone who can get to one.

Can you point to the rules that state this ??

If you are referring to PART 97, this has been restated by the FCC to only apply to hams and the transmission has to be in the ham bands. It is not a blanket statement ment for anyone and on any frequency other than the ham bands and for hams.

I got my refurbished 235 and 895 from the online Uniden store and
couldn't be happier, lower price and only $5 for shipping.

I remember a big long winded post from that CEI guy defending his
company's shipping policy and making the Uniden online store sound
like it is selling beatup junk. Oh well I guess the buyer must beware!

>Yes CEI is without a doubt the most economical way to acquire scanners on

I have an 8 channel Pro-7a VHF (148-174mhz) scanning reciever. It used to work fine but now only channels 1-4 will work. I checked the crystal sockets and power comes in from the one common side. About 10 volts is coming across all 8 sockets, so I guess the problem is beyond the sockets. I checked the power and sockets 5-8 act as if they are just turned off. Does it sound like bad swithces? Also, this scanner a has a light for each channel and lights 5-8 are out. At no point does it seem that the 8 sockets are split into two groups, so I find it odd that 5-8 all dont work (I could understand if it was jsut one that didn't). I recently used a 12 V dc power supply for the first time, instead of the 120V it has attached. Any one have suggestions on how I can fix this? Can you shine some light on this?

He he.

I can't be specific, but it's in the 462-462.9975 (channels 1 to 7) and
467-467.9975 (channels 8 to 14) ranges.

In your PRO-7A, test/replace these ICs:

IC6, type 7408A

IC4, type 7400A
IC5, type 7400A

They are older TTL technology, though inexpensive.

If you find a bad one and decide to replace it, I'd add
an IC socket so you won't have to desolder it again should it's
replacement fail.

Maybe in the USA - the FCC regulations hardly apply elsewhere!

In any case, with the sheer number of mobile phones around nowadays, how
many people would NEED to use police frequencies directly?! Come on now,
be realistic!

No they don't. Please quote what you have in mind. BTW Sec. 97.403
doesn't say that, but maybe you've something else in mind.

Excessive power, yes. Out of sub-band for your mode, yes. Out of
sub-band for your class, yes. Impropers signal purity, yes.
Unauthorized external RF Amplifier, yes. But out of the amateur
bands for your ITU region, no.

> As a secondary consideration, many states prohibit mobile
> instalations of equipment capable of receiving police/ps
> frequencies, let alone transmitting on them. I'm not sure of the
> legality of these laws, but I would play it safe.

Yes, those local laws are legal and enforceable and the fact that the
alleged offender holds an FCC amateur radio license will be no
defense. The license is only a defense against a Commission action
for breach of the Part 97 rules, as is stated in 97.403.

The fact that life or property were truly saved, or at least that a
good faith attempt to save them was made, can be offered in
mitigation of penalties, but not as a defense against the offense.
It's very much the same situation as when a motorist claims that an
emergency requires him to break a motor vehicle traffic law such as
speeding, running a red light or driving without license or insurance.

I own a PRO-34 and had always received cell phones in the 854 to 868 mhz range (though I Never listened to them). I know these are images or something but I did receive them UNTIL I had to replace the AC power jack. After taking the scanner apart and replacing the jack I no longer receive anything in the 800mhz range.

Can anyone tell me what might have happened or what could be wrong with the scanner?

I appreciate any info you might have!

Please email me at:
kallen@rnet.com

Thanks!

(This is all hypothetical, and you don't need to INSULT people. It is only a newsgroup.)

>You are a fool spouting off your mouth where you obviously know
>nothing! Every system that you mention has a backup power source in
>case of an emergency, the only susceptible part on each system is the
>antenna and I'm sure your little radioshack antenna system grounded
>with there aluminum wire and 4ft ground rod are not going to compare
>with any commercial radio systems setup!

First, yes, but those power systems last only as long as the battery does, or as long as there is fuel. These systems usually cannot be run on solar power. Gel cells for HT's last several hours (some for days), and these radios CAN be run on solar cells.

Second, telephone lines DO NOT have a backup power source. The only possible thing you could use is a satellite uplink, and that requires [a lot of] power, also.

** Lastly, I DO NOT have a Radio Shack antenna - I have a homebuilt 2 meter Yagi with rotor, and a homebuilt scanner antenna.

>Most any system with it's own power source can still be used, what is
>your point?

Cellular phones can't, and with solar powered power sources, HT's can be powered indefenitely.

Cellular towers (like I said) require a telephone line, also. If telephone service is out, so are the cellular towers.

>Most likely your little antenna will be out of commission and the cell
>towers will all be up! The police will all be talking and most hams
>with any sense will still be talking..I hope you have a HT so you
>might join in!

How could the cell towers be up when there is NO PHONE LINE? Cellular towers require a telephone line to make and take cellular calls.

Sheesh.

Whew! I am glad that I AM not a little fool - I only *seem* like one (which
is untrue)!

And nope, wrong. I don't take my Radio Shack scanner with me. I use a Yaesu
if I want to receive public safety.

I also do not have a bike, or a siren.

In reality a frequency counter is a test instrument and typically does a poor job as sniffing out frequencies for scanner use. Optoelectronics did a great job of turning the test instrument into a valuable scanner too. The Scout which sells in the $300-350 range depending if it is sale or not is a great choice. It holds frequencies in memory and can even reaction tune certain scanners. Opto makes a TechToyz version of a frequency counter with I believe 3 memory slots and it can perform ok with a good antenna. The one Opoto sells for extra $ is crap.

Source record: 146210

The Minnesota State Fair starts tomorrow 8/27 and runs through Labor Day. The MN State Fair has it's own self dispatched police department during the fair time. They use 153.965 for a frequency. If you are visiting the Twin Cities area or live around here and did not realize that it is fun to listen to. Being a VHF frequency you can pick it up pretty much through out the metro area.

>How would you ensure 24/7 staffing? Eventually, someone would have to
>be paid to cover certain slots.

The proposal is valid for certain types of PSAPs which already ARE staffed 24/7 with thoroughly trained communications personnel. This is not a proposal to put a radio on the corner of a desk in a police station and letting whoever is near it answer, like many departments did with CBs in the '70s.

Most communities now have a communications center like this. Please see http://www.apcointl.org or http://www.nena.org for information about public safety communications. After 17 years as an EMT, then Paramedic and firefighter, my profession now is public safety communications and the field has evolved into a very elaborate mesh of training, equipment and technology. You may be surprised to see what's happening in it.

>Why not just have the ham club put up
>a repeater with an autopatch on it?

Because I, or any other ham, as an itenerant user would not have normal access to the patch. We go back to depending on a select few to bring up the patch or act as intermediaries in gathering info. This is grossly inefficient - and - what if no one's around (that happened to me while I was trying to report an MVA last Sunday on the Garden State Pwy!)???

Next, the patch may time out before the public safety dispatcher has an opportunity to receive complete information or while the dispatcher is instructing the amateur caller on lifesaving procedures (emergency medical dispatch pre-arrival instructions).

We now can make the caller the FIRST RESPONDER if they are physically able and willing to follow simple instructions even if they don't know CPR or first aid. More people are surviving as a result of this where they would have died without intervention.

Direct communications with a trained public safety telecommunicator/ dispatcher at a PSAP - ONLY for the purposes of reporting an emergency - is a much better way to go. I believe it would be a tremendous increase in the value of amateur radio on the whole (and may save a few lives). Maybe something to try on an evaluation basis?!

I have submitted a draft PRM for such possible operation to the League for criticism/ comments. If you'd like to see it, I'll email it to you. Should be interesting. I admit this idea is not a conventional solution as we have seen in the past. It requires a little thinking outside of the box to see the potential.

CUL,

de KA2AYR

However, you need to walk in an officer's shoes, get the education, do the time, pay the dues, then maybe you can talk about police officers. Most hams, can't be counted on to volunteer their time for "training," but want to rush in like fools during an emergency. And with no training in police issues. Besides, the average "ham" or person won't see a rape, shooting, or murder happen. And the best way to summon help ins through the telephone. And let the real police handle the emergency as they are trained for it.

When I was searching to buy a scanner, I called Scanner World to ask some questions about a scanner. I reached the rudest sales person I have ever dealt with in my life. I was extremely pissed off when I hung up. I wrote an email to Scanner World, telling them when I called and a "transcript" (pretty much word-for-word) of the call. I would have expected some form of an apology for their saleswoman, but I never heard from them. I personally have decided to boycott them because of this. I'm not saying that anyone else should, but there is no talking me into dealing with them again.

Single side band was invented? developed? by an army major who's name
escapes me at the moment a few years before world war 2.

>agencies.

Well, that's not entirely the root of the issue. First, we have very old technology that is intact and, since it produces revenue, will not be replaced with more spectrum efficient technology. Instead of making way for the new by compulsory elimination of inefficient technology (like IMTS telephone or analog air-to-ground telephone), we glom more spectrum space.

Next, we don't regionalize well. Every kingdom wants its own system and we use 135 discrete frequencies when we could put in a county-wide trunking system with 20 channels to efficiently provide many many more virtual channels and enhanced features for each user. Again, we go grabbing more space instead of commonly solving radio issues.

Then, I remember (you probably do, too) when radio spectrum was considered a natural resource, not the solution to the general budget deficit. Now, high rollers are seeking exclusive use of radio spectrum for their speculative ventures and they'll pay the bucks for it, giving us (public safety and ARS) the elbow. Some of the things the ARS has lost frequencies to have NEVER made it near profitability. Listen to 220 - 222 MHz! Instead of regrouping to handle crowding, the spectrum is still assigned to ACSB trunking and conventional technology and is a graveyard in most parts of the country.

It has become the primary mandate of the FCC to administer auctions and not perform enforcement on nearly the scale it should be! (that answers another comment above about the FCC, too). At an emergency management conference two years ago in Missouri, an employee of the Commission toyed with the concept that Congress may elect to "sell" public safety frequencies to a private concern and users would have to pay their radio bill to stay on the air!!! Imagine that!!!

Personally, I won't go into a fire without: 1) an SCBA & turnout gear, 2) a flashlight, 3) a "Halligan" or an axe and 4) my OWN radio. I don't have to talk on it, but It's a safety thing with me.

Steve

Hams have used radios since the late 1800's . . . ! (Yes, it was CW, but
that is still a full-blown radio.)

I believe FM came into wider use in the mid-50's, but I can't be sure. AM
was mainly used back then for public safety, radio, etc, however [W]FM was
used for television audio.

Did you read this? It says "No provision of these rules prevents the use ...
" -- it does not PREVENT an amateur radio operator from making an emergency
transmission.

To be "at one's disposal" means something that can be readily accessed by
someone. In this case, it is an amateur operator with a radio capable of
transmitting on a public safety frequency. To be "at one's disposal" does
NOT mean a person must be licensed to use something.

What it is saying is that when normal communication is not available, other
methods may be used.

Do some research.

Bahahahahaha! Trunked, digital, and other systems were CERTAINLY not created
to keep people from listening or transmitting! That is the stupidest thing
I've heard (and to those who know me, that's gotta be bad <grin>).

These systems (trunked) were created to handle traffic efficiently, and
digital systems were created to reduce interference, while at the same
time - and most importantly, to provide secure communications.

>please show some evidence about your theory as to why agencies are going
>encription. I can provide for my reasons. How about yours.

Where did you "provide for your reasons" ?

It's *encryption* (with a "Y"). PS agencies are using encryption for secure
operations -- so that no one can LISTEN to them. Transmitting and listening
are two VERY different, if not opposite, actions.

Digital systems ARE subject to interference by non-digital transmissions.

You'll agree with any idiot. Can you prove your statement? You're obviously NOT an amateur operator, because there is MUCH more to it than doing emergency services.

How can someone on HF tote their $2000 rig around and act like a cop?

>Talk about ignorance, I think "you" need to look into the samaritan laws old
>boy. You can render aid and not worry about being sued. It does not give you
>the right to use a communications system you are not authorized to be on.

Yes ... if it is NOT an emergency, and if there is no other communications available.

>And why on this earth would you have a radio in your possession that is
>capable of transmitting on a public service frequency unless you want to be a
>wannabee. I think HAM RADIO @ ITS BEST said it right.

It is to be used in an EMERGENCY (you know, an property- or life-endangering position).

One question: Why would you want to be a wannabe AROUND POLICE with a radio that will transmit on their frequency when they know that you're not licensed?

Not me! Not outside my home counties where I know enough LEOs to make reporting a crime safe. I reported a couple gang bangers hiding behind a Dumpster to LA cops obviously looking for somebody. Got a trumped-up traffic ticket as thanks. Was later told this was SOP to assure they could ID me! I'd be afraid they'd frame some worse crime on me!

Emergency? Away from home, I'd call 911 from a pay phone once I was far enough away to avoid responding police units.

Attacked by criminals? I grew up So. of LA (Compton), got straight "A"s in my LE courses, weigh 240, NRA firearms (pistol)instructor, martial arts, etc. With all due respect to the real pro's out there, what's the average donut dunker gonna do for me except get himself hurt? Better off calling a HAM. (S)he won't shoot me by mistake! Or arrest me for defending myself. {:o)

This is a different product from the one normally seen with the Saitek label.
For one thing, the battery connectors in the RS unit are connected in
parallel, whereas the adverts for the Saitek mention that each cell is
independently monitored.

"Recharging" single-use alkaline cells is a tricky business at best. I would
certainly not attempt this with the Radio Shack device.

> Please reply by e-mail. Remove the 1 after the @ character for the
> correct address.

There are a number of "non-standard" CTCSS tones that I'm aware of.
Very few radios will decode them. The ones that I know of are:

F in Hz

69.4
97.4
159.8
165.5
171.3
177.3
183.5
189.9
196.6
199.5
206.5
229.1
254.1

I suspect these were used on RCCs that had used up all the regular tone
set. This was probably before the advent of DCS (Digitally Coded
Squelch).

DCS could be another reason why you can't decode the tone. There are a
number of DCS codes. These are similar to CTCSS except instead of a
steady tone they send out a steady 132bps data stream. There are 83
DCS codes. There are many different DCS codes, more than 83, but any
one code can be decoded as three different types.

I find it remarkable that scanners aren't available with DCS decode as
well as CTCSS decode nowadays.

Yep. I dunno why 900 MHz phones aren't catching on. They are better (or at least have farther range) and they've gotten much cheaper than they used to be.

The only problem I can see with digital 900 phones is that once you get too far from the base, you have no idea that your call is going to either be there, or not. There is no "static warning". If you go too far, it just drops.

At my old work you could dial the after-hours line and when it asked for your "extension" you played back your DTMF tones. It would then repeat them (up to 32 digits) back to you before it told you that the extension was invalid.

FWIW, I downloaded a DTMF decoder that uses the soundcard and it works like a champ. Sure you weren't doing something wrong?

I expected that kind of a response from someone sooner or later.
Obviously I was just being sarcastic
in my original message. It is obvious that a good number of stores on
either side of the border are
doing this.

I must add that I did specify that it was the RS store I dealt with. One
ones I do not deal with
charge for the catalogues.

Joe Nicholson wrote:

I saw this and immediately went and read the "Florida Scanner Law" as posted at http://www.swl.net/cflg/flscnlaw.txt because I had never seen this particular interpretation of the law. I'm wondering whether the definition of installed is from the writer or from the state. In the case of FAA documents whenever a term like this is used and is not clarified in the immediately preceding or following text, it is defined at some other point in the document. Does Florida have their own definition of "installed" or do they leave that to the discretion of the officers/judges?

As per a suggestion from the newsgroup, I am now interested in
buying a frequency counter..

What should I be looking for ? what should I avoid ? should I
go for new or old ? what is a good price range to expect ?

Also, I'm in Mississauga/Toronto Canada.. if anyone in the GTA
has one for sale also contact me !

Thx a lot in advance :)

I read somewhere a long time ago that the first use of 'police radio'
was to request local radio stations to add announcements to their
broadcast for police to pick up. Don't know the year though.

I also recall there were some states and/or localities that, for a while,
tried to severely restrict what civilian motorist could put in their cars,
Including radios.

I think it was either the state of Illinois or the city of Chicago that
prohibited mirrors! (They could be used to spot police!)

No, I am 100% correct, and YOU are ignorant.

LOOK AT THIS:
==========
From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu/pub/hamradio/docs/misc/scanner.faf

Paired Frequencies

Base/Rptr mobile i/p offset

152-152 MHz 157-158 MHz +5.26 MHz (Taxi)
+5.26/+6.46 (Mobile Phone)
160-162 156-157 -4.6 (Marine VHF)
217-218 219-220 +2 (Marine AMTS)
220-221 221-222 +1
422-425 427-430 +5 (Great Lakes border)
450-465 455-470 +5 (10 MHz segments)
470-509 473-512 +3 (6 MHz segments)
851-896 806-851 -45
935-940 896-901 -39
==========
Los Angeles uses TV channels 14 - 17 for their repeaters, and the ch14-17
range has 3.0 MHz offsets.

BTW: It's "Hells AngEL".

Hmm, in all my years of grade school, we had spelling tests every week in English class. Never did we have a "Spelling Class". Spelling is CERTAINLY basic English.

BTW: You spelled it incorrectly at least THREE TIMES.

>And I guess that when you cannot say anything usefull critique the
spelling.

No, I did say something useful -- I am letting you know that it was created for efficiency and security, NOT so others' radios are disabled from transmitting on digital frequencies (with which non-digital radios CAN interfere).

No, I believe he meant any AMATEUR frequency. From what I've read of the
rules, it is not good at all to transmit on non-amateur bands, REGARDLESS of
whether or not it is illegal.

I don't wear (nor like) caps and badges. I don't walk around with an HT on
my belt -- I use it mainly at home and in the car.

>Read what started the thread and quite acting like a wannabee ham.

How can I act LIKE a wannabe ham when I already AM an amateur radio
operator?

Ham = amateur operator. ::knock knock::

>Your statement, not mine. You answer that one. What a stupid remark.

Nope (you're wrong and ignorant as usual), you said that we hams always want
to be like cops, when that certainly isn't true.

Have you ever seen a cop physically get into a street flooded by torrential
rains and push a car out of 12 inches of water? No. But hams do.

Why bone up on trunked radio systems, cell phones, and radio systems? They all go out when the power does.

Amateur radio can still be used, EVEN if all the power in the world was lost.

Now, why (and how) would I use a cellphone in an emergency when phone lines are dead (or the electricity to the tower), and why would I use a trunked system if the repeaters are out?

You've also denounced HAM RADIO @ ITS BEST several times, as you seem to depise hams, and I believe he is a ham himself.

It's probably DPL --sort of spread spectrum for PL tones. DPL uses a
slow digital pattern which repeats. Find a DPL decoder and you'll
probably find the pattern.

The earliest hams only interfered with Navy ships and shore
stations, which led to the regulation of amateur radio. A good book to
read about the history is "200 Meters and Down", which is published by
the ARRL..

I spent 5 years as a police dispatcher in a metropolitan area. I have ridden with many officers as part of the required inservice training. I also walk a citizen-police patrol beat in my neighborhood from time to time. My comments are informed by both education and experience, and my criticism of police officers who think they know everything stands as written.

You're pretty lucky if that happens. My local telco owns other telcos in other counties and other states. Dialing 0 MAY get you a local Rochester operator. It may also get you an operator down in Orange County, NY, where there is a Village of Rochester. A dispatcher over 200 miles away is NOT going to know where to send my call for assistance.

I'm sure this isn't the only place in the country where operators are not necessarily local.

How would you ensure 24/7 staffing? Eventually, someone would have to be paid to cover certain slots. Why not just have the ham club put up a repeater with an autopatch on it?

Incorrect. The FCC considers possession of a linear amplifier in anything other than a ham station to be PRESUMPTIVE EVIDENCE of intent to use it. They can confiscate it and file pertinent charges on that basis alone.

I don't think there are any such presumptions for other types of radio equipment that might be "unauthorized", but it would only take a tiny rewrite of relevant rules or laws to make it so. Then it WOULD BE illegal to POSSESS an unlicensed transmitter (or more accurately, a transmitter for which you have no license to operate it).

>then it is illegal to use it on those frequencies.

I'm confused as to what statement you disagree with. It is quite true that many volunteer ambulance personnel and firefighters in my own area are carrying modified Icom IC-02ATs and similar radios that are modified to transmit on the local fire and EMS channels. It's cheaper to do that than it is to get the agencies to issue type accepted portable radios to all members.

I have two problems with the above situation. 1) The agencies probably don't have a clue as to the regulations governing radio. The technicians that are modifying the ham rigs are hams themselves and usually get compensated (paid) for doing the mods by the individual member who owns the radio. If the agencies would prohibit the use of such radios by their members, it MIGHT put a dent in the practice. But, 2) Not every vollie must have his/her own personal transceiver to carry when off-duty. First, we have to convince these volunteer agencies of that basic truth. I believe that this is part of the reason for the proliferation of new "spectrum efficient" radio systems - too many people have radio transmitters, and they don't all need them. Now we're just making more room for them, instead of limiting access to the radio spectrum to licensed individuals and agencies.

Source record: 146273

Look, we've had the usual rec.radio.scanner overlength debate on this topic, and probably shed more heat than light on the topic, as usual.

I for one apologize to Ham Radio @ its best, Just Cause, and others to whom I sent insulting messages.

The basic point of the whole discussion, I think, is that everyone has a strongly held opinion about what they may or may not do in an emergency, and about what an "Emergency" really means. To me, it's like civil disobedience. If the situation is important enough to you to risk confiscation of your equipment (an extremely high probability, regardless of jurisdiction or authority to do so) and fines (also quite likely) and jail time (it's happened), then it's up to you to decide to take those consequences in exchange for your decision to act in a particular manner.

As for conflicts between cops and hams, I have the highest respect for police officers in general. As in any profession or group, there are some jerks who shouldn't have badges or guns. But we can't disrespect all officers because of the few. The same goes for hams. Yes, sure, there are cop wannabees out there, and people who put too much stock in their ham ticket and "training" for emergencies. But there are many more who are regularly engaged in life-saving activities in full cooperation with (and with the full respect of) their local public safety agencies. Just read "QST", or if your personal biases won't allow you to put stock in a ham magazine, read the "APCO Journal". This is all well documented.

As has probably been said here in rec.radio.scanner hundreds of times already in connection with various topics, let's get back to scanning.

Actually Hell is wrong.

The FCC regs clearly state, that in an emergency concerning
a threath of life, any means of establishing communication is legal. That
means out-of-band, or excessive power, or anything else you deem necessary.

Now having said that,
if you do something like this, you better have a darn good reason
to explain your actions (and you WILL have to), including proving a lack of
other available means of communication.

As a secondary consideration, many states prohibit mobile
instalations of equipment capable of receiving police/ps
frequencies, let alone transmitting on them. I'm not sure of the
legality of these laws, but I would play it safe.

What is this guy, stupid or something? You've got to be kidding,
right? Hey, the transmit would be 465.2325 and you would have to have
either the CTCSS or DS tone. I would love to give it to you if I had
it so I could read about you in the next few days being arrested for
being an asshole!

Actually, they do sell them -- you have to special order them for about $35
or $40. Better to order them through Uniden (go to their website at
http://www.uniden.com), for about $10 or so.

>
>Bad Monkey

BUT this depends on the system used,
because triangulation in a GSM system is based on the measured
time-delay between the tower and the phone. Thus signal strength does
not matter. Both values are easily avalible in the system, the signal
strength reading is used so the base can tell the phone to in/decrease
transmission power, and the time-delay to limit the maximum distance
to app 30 kilometers. That limit is necessary to keep the 8 timeslots
on a frequency from beeing messed up. Some extra-long-range cells are
used up to 60 kilometers, with increased guard slots between
transmission, reducing the capacity.

On my modified Ericsson 337 I can see the distance to my current base
tower in increments of 500 meters, as soon as I have a call up. (Plus
channel, output power, incoming signal strength, allocated timeslot
and error-rate)

/Marcus

Any body know what frequencies these suckers communicate on? The
timing of that question was wonderfully humorous, but the context is
seriouos...I'll bet some scanner freak some where has hacked their
frequencies.

Thanks for the info

Roy

See...this thread is NOW definitely scanner related. and not a total
abuse of bandpass.

It plugs into an LPT Port. And there is a program called CI-400 to log
all the pages to the screen and a file.

> Also, can you only look for certin numbes that you decode from the pager
mode?

I'm not sure what pager modes the M-450 gets. I have the M-400, that gets
everything except FLEX. You could use POCFLEX for FLEX. You can look for
any numbers you like.

From: jroulier@[nospam]
Message-ID: <35e3739d.4755978@news.albany.net>
Source record: 146382

Is it a good idea, and if so, any recommendations?

Also, do antennas go bad? I have had the RS extendable, but seem to get a lot of interference on it, and in most bands. Often the static stops if I put my hand on or near the antenna. I know my computer interferes on some, but it still continues on others when the computer's off. Right now I went back to the stock antenna, which is great at the 800, but listening to cell isn't what I want to do, and the police and fire around here is 46, 155, 460, ranges, and the static is there on some of these ranges. Will an outdoor antenna help?

Next question: Is there a web site or book I can get my hands on the have the correct step sizes and receive modes for ham bands? I did an hour search the other night, and only came across a morse code conversation.

I bought mine from CEI online at http://www.usascan.com.

You have to look hard to make sure you get all the available specials like case and headphones, but I was very pleased with the service and impressed by the availability of these great scanners at the lowest ever prices. This is a great site.

By the way, the headphones suck. They won't stay on my head because the ear piece slides down. Guess that's why their free ($12)! But I didn't have time to order a new set online before the Bristol race, so I had to go to Circuit Shitty and buy a set of Koss phones for $60. Oh well, you lost that sale!

The case is nice though.

3888. FS: ICOM R-7100 in good condition + JIM75 pre-amp $850

HI,

I have a good condition ICOM R-7100 for sale. This
covers 25MHz to 2GHz with no breaks or blockages. Does all
modes, AM, AMW, FMN, FMW, USB, LSB. I added a buffer for the
discriminator and the output is available at the back of the
radio.

The JIM75 pre-amp is very new. Has band pass settings
and works very well.

Looking for about $850. E-mail me if interested.

Daniel

That's why you don't use it if you expect to stay out of trouble. Know
what I mean?

>Why did you make this claim???

Because I might have stopped some "buff" from ending up in tomorrow's
paper. That's all.

>> The premise is that you SHOULD NOT have equipment capable of
>> transmitting on these frequencies...

>Whose premise, since there is no law prohibiting this??

It only becomes illegal if you use the equipment outside of the range
it was type accepted for. It's a POTENTIAL problem. Adding that diode
doesn't make you a criminal. Once you use it out of band, you still
aren't a criminal, per se (unless you jam something) but you have
something that is not allowed to have made that transmission.

Of course, there is no "radio police" so the only problem is when the
equipment is taken by someone who believes they are. Generally, the
only reason to confiscate such a radio is based on not being type
accepted.

>The capabilities that I choose to enable or add on to my personal-use
>radio equipment is my concern alone.

>County, CA, did so needlessly, almost as if he were waiting for an
>excuse to try it out. And public safety frequencies are not the place
>for over-enthusiatic radio operators to crowd and confuse with their
>"emergency" reports of highway fenderbenders et al.

Maybe we need to do something about making amateur radio more accessible to PSAPs? This could be bad, too, because there would be people cruising up & down reporting all of the disabled on the shoulder over it.

>OTOH, a poll of equipment used by MANY MANY public safety volunteer >organizations (fire departments, rescue squads, etc.) would reveal a >large amount of ham equipment modified for use on public safety >channels.

That's their perogative, although it says something about the price and availability of "commercial" equipment.

>Let's hope no one starts a self-righteous crusade against this until it >is shown that a problem is actually resulting from such "gray-area" >usage.

Generally, there is no problem in the gray zone. As a ham, myself, I think the biggest problem is with illicit 10 meter operation and in some metropolitan areas (like NYC) various radio dealers sell two meter radios to taxi fleets and other enterprises.

As a public safety provider, I would be understanding to a point, especially if this resulted in a save- but I couldn't vouch for my non-ham colleagues! I have zero-tolerance for abuse.

Every once in a while this issue pops up and there are a lot of "What if"s and a lot of misinformation about what can and can't happen - especially with the R&Rs. And, like now, it's discussed into the ground. I really don't care how an individual uses their equipment - that's up to them! It would be a shame if people who didn't think twice about any consequences of their actions get into trouble, even if it was because of overzealous enforcement thinking the R&Rs are within the scope of local authority.

Take care Mike,

Steve

Buying from Communications Electronics, Inc. can be a BAD BAD BAD experience!! Beware or get burned.

Yes CEI is without a doubt the most economical way to acquire scanners on the internet and probably the cheapest anywhere. They ship promptly, they have a nice website(professional grade if you ask me) and they carry high demand items. However they have a couple of business practices that make them look like greedy scoundrels. They advertise that if you buy an Uniden BC235XLT you will get free, a nice leather carrying case and a set of large headphones(I guess by Uniden also) free. Then in the small print they write that there will be an additional charge of $12 for shipping of each items. If you buy the BC235XLT(like I did) please beware because they will screw you and then tell you it was written somewhere on their website. Shipping for the scanner is going to be $18 plus the price of the scanner plus $24 for the headphones and the case. The worse part is that these additional "free" items are of the lowest quality. The headphones wont stay on your head for more than a minute without sliding down and the case is not worth two cents. Please, if you buy the BC235XLT from them DO NOT get the "free" items. You will be disappointed. Do not have the order shipped to a POBOX the shipping will be doubled, yes doubled. If you have it shipped to a POBOX you will pay $36 for the BC235XLT and $48 for the two free items. I think this is bad BAD Bad business practice. Come right out and say it's not free and don't hide behind shipping to get people to buy your products. I must say that if you buy a scanner and have it shipped to a street address you will save money over other dealers. Now, if you dare to get any of their "free" stuff or ship to a POBOX you will be screwed. Another thing that bothers me is that shipping for the BC235XLT is $18 using UPS ground service which is about $5 according to UPS. They charge you an additional $12 for a box, tape and closing the box. Is that the right way to do business? I don't know but I sure don't like it a bit. Their 61 day Money Back Guaranty is another scam. Yes, you can buy from them and be a happy camper, but if you don't watch out they will burn you. As far as the scanners and CB's, they sell a good product. I just wish they would change their business practice to a less insulting method.

In Florida it is legal to use a scanner in a car as long as it is not "installed," the definition being connected to both an external antenna and the vehicle's electrical system. Running a portable with a rubber ducky off the cigar lighter is just fine.

There are exemptions from the law. Licenses amateur radio operators, reporters, burglar alarm and security services, etc., may all install scanners in a vehicle.

In LA the police and sheriff and county fire do not use standard 450mhz uhf frequencies. They use TV channels 14-17, which when used for public service have only 3mhz for repeater input. Standard 450-470mhz systems use 5mhz offsets.

>From: "Miguel Puchol"

>I don't think that is ethical, but I think that you can only criticise that
>the program won't allow the previous, freeware version to be installed
>again. I don't think you can criticise anyone for wanting to make a bit
>extra cash out of his skill.

Again, you have missed the point. It trashes the program that has been installed on the hard disk. The guy might as well send a virus along with his new version if he's going to pull a stunt like that.

>If you are all so upset, why don't you go out and learn C so you can write
>your own programs?

I can think of a lot better things to do with my time than write programs to give away. The fact that you want to do it is entirely your own business and you should stop complaining that people aren't more appreciative.

>And also, why don't you go and criticise Microsoft for making billions of
>dollars? Are you not using ANY of their software right now? I bet you didn't
>pay for that either...

What Microsoft has to do with this, I have no idea. But if you ever get around to creating something like Explorer or Outlook and then give it away like Microsoft does, let me know. Then I could take you seriously.

>Besides, if nobody is expecting Deti to do anything, then why bitch so much
>about him when he does?

Again, you have missed the point. You should devote as much time to developing your reading skills as you do your coding.

>I think you are not in the bussiness of developing software, so you know
>NOTHING about it at all. If you were, you wouldn't have these opinions.

You're right, I'm not in the software development business. That does not mean I don't know anything about it. I don't suppose you are in the TV business (whatever) but you must have some familiarity with how it works.

Sorry, Mike, you want to develop freeware, that's your business. Stop complaining about the economics or find something else to do.

>> number.
>> >
>> >Thanks in advance,

Good company. Prices are ok.

Grove Enterprises can beat their prices.
ACE can beat their prices also

Give Grove a call ... an 800 number also.

Also highly recommended is Ham Station
ask for JEFf....an 800 number
go to 800 information operator and
ask or go to their web site and explore....

h/w.hamstation
forget Groves'
forget ACes's

i do business with ham station now...

Also a place Star...they have low prices

Star Electronics...low prices...800 number
maybe....

With Ham station you get "yes" or "no" right
away as to if they got them.

Grove and Scanner world .. same

ACE...? have not done much with them.

They don't advertise or send catalogues
and that tends to cause forgetfulness...

the others do. so they get first pick.

bill conduit
e etc.

Newsgroup: rec.radio.scanner
Date: 1998-08-26 00:00:00 UTC
From: Jim Rizos <jrizos@nac.net>
Message-ID: <35E3F7FF.439957A3@nac.net>
Source record: 146413

Hi everybody-
I was wondering if anyone out there knew anything about antennas and grounding them.
If so, could you please help me with a little problem? Here it is: I love making things, and when i found outdoor discone scanner antennas were 60 bucks at radio shack, i decided to make my own. All went well, i brazed the elements (rod that was lying around my garage) into the base (a piece of 1 1/2 inch galvanized pipe that i drilled holes in) then i started to hook it up to the coax, and suddenly, all was not good. Grounding is a major concern because its going on my roof, and so I cant figure out whether to connect the shielding from the coax to the actual antenna itself or to the insulated mast. As i said, if it were hit by lightning, i'd want it o be grounded properly. I have the piece for the side of my house that accepts coax and grounds it, so i just need to know if the shielding should be connected to the antenna or the mast thats insulated from the antenna. Thank you very much o anyone that could help me.

At this point I was agreeing with you but the above statement is totally wrong and there is a law against using ham radio equipment on the public safety frequencies. If the equipment is not type accepted or approved by the FCC then it is illegal to use it on those frequencies.

HMG and Dan. Most new systems are going trunk and do not use CTCSS or PL.
They now use a system number and a connect tone. To be able to program an 800
trunked radio you need both to be able to follow the trunking and also to talk
back. To have the system key you need to get it from the system administrator
and I doubt that any ham would get that key from them. Also ham HTs will not
go on trunk so the only way for someone to have a radio for trunking is to but
one from Motorola or GE/Ericsson or used. Many of our local systems are
trunked and unless you get these keys you will not have access to them. It is
not like the old days where you can figure out what PL tone they are using and
program it into your ham ht and be able to access their system.

Your info I am sure is quite appreciated.
"BUYER BEWARE" is paramount on the Internet.

ALWAYS ask for the total charges before sending any money.
I generally do only COD via Internet orders. I'll gladly pay the 5 bucks
additional charge and make Mr. UPS stand there while I check my order.
You may want to contact the BBB and see if there practices might be
considered "deceptive"?

Actually, my statement is TOTALLY TRUE. I think what you mean is that the usage described is improper, and technically, I agree. It is NOT legal to use equipment on the PS frequencies that is not FCC approved or accepted for that use. The legal issues notwithstanding, modified ham equipment IS in very common use within MANY volunteer public service agencies. I was describing fact, not law.

I think the frequency is 2. Of course, they would need a PAIR of
radios.
If they are not licensed on that freq, they could get BUSTed. BTW, do
they
sell BRAtwursts at Hooters? I asked one of the waitresses one day, but
she said she couldn't remember...she apparently was having mammary
problems.
What a boob. Their employees should try to keep aBREAST of what they
sell, don't you think?

It's amazing, but about two or three people a week come to my store looking for the parts. The only part that RadioShack doesn't have is a variable capacitor. I have been told the thing works, but I have never tried it myself. You must tune it for the particular channel you are wanting to descramble. If you want to change channels, then you have to spend several minutes tuning it again.

Either one should work fine. Placing the magmount on the trunk is fine. In fact all of the sheriff's cars here use that antenna on the trunk. Running the cable into the trunk right next to the antenna base keeps it from flying off when they SPEED down the highway.

As a senior engineer involved in the cellular and PCS industry I may have the ability to clear up this thread. No, cellular nor PCS phones do not have the ability to bypass the switched landline network. If the entire network is down all cellular phones are down as well, however we extensivly utilize methods other than copper wire to get the signal from the cell site to the landline switch. As mentioned point to point microwave is one of the methods, we also utilize fiber optics. In the event of a landline system crash we can redirect the cellular calls connection to the switched network through other areas through the NOC or Network Operations Center. We are also looking at utilizing the new iridium system of satellites as a backup system, however if it would become necessary to use this very expensive means of redirecting calls through the NOC we would limit the use of the system to authorized emergency personnel only, this is done utilizing a bit programmed into your phone at the time of purchase. Hope this clears up some of the possible misinformation or misunderstandings that have occured within this thread.

Maybe you need to learn to mind your own business, twit. Before someone starts complaining to YOUR isp. Have you at least got the money up for plastic surgery, so you can at least LOOK like Bill Cheek, wart - lip ? Because you sure ain`t delivering to this news group what Bill did. If you have to be a social outcast and malicious malcontent, then at least learn to do it quietly. Malodorous trolls like you should stay under the porch. You`ve got nothing going for you, and you know it, and I know it. So don`t waste my time. You contribute nothing to this group but varous and sundry idiocy, and a few well - known smells. Take a bath. Take a hike. Get a life. Get a brain, while you`re there. Take up a hobby - ditch - digging comes to mind. It would suit your mentality and social standing. I got things living under rocks and logs in the back yard that are college professors compared to you. You are a whale dropping. In case you don`t get that, there is nothing lower than that on the planet - whale droppings are on the bottom of the ocean. ..... Now, if you can just find that "mirror" macro.....

The CHP mobile "extender" frequency is:

154.905 MHz

When I'm on the road, I scan all the relevant CHP frequencies, but the
one that gets my attention is this one. It means a unit is nearby.

3945. Antenna Questions...

Newsgroup: rec.radio.scanner
Date: 1998-08-27 00:00:00 UTC
From: jroulier@[nospam]
Message-ID: <35e6efa8.47575469@news.albany.net>
Source record: 146078

Outdoor Antenna for a MVT 9000? (actually bunch a questions)

Is it a good idea, and if so, any recommendations?

Also, do antennas go bad? I have had the RS extendable, but seem to get a lot of interference on it, and in most bands. Often the static stops if I put my hand on or near the antenna. I know my computer interferes on some, but it still continues on others when the computer's off. Right now I went back to the stock antenna, which is great at the 800, but listening to cell isn't what I want to do, and the police and fire around here is 46, 155, 460, ranges, and the static is there on some of these ranges. Will an outdoor antenna help?

Next question: Is there a web site or book I can get my hands on the have the correct step sizes and receive modes for ham bands? I did an hour search the other night, and only came across a morse code conversation.

Torres
Although your question is not unlawful and you do note that saving lives is more important, I wish to stress that the American security situation is on high alert in every county in America and every country that is on friendly terms with America.

Amateur radio operators take great pride in radio operations within the law and to its every letter and phrase. Amateur radio operators will be there every time for disasters and civil defense. We hope that whatever you plan to do with this information, that you will do the right thing.

People matter. Your safety matters.
Enjoy the hobby; electronic freedom is not universal.

Robert,

Orlando Police/Fire and all the agencies around here
(Orange,Seminole,Osceola)
are Trunked

If you have a Trunktracker (and I suggest if not - get one)

go to my web Page - http://www.swl.net/orlandotrunking/

this should help you out - also there is a mailing list for discussing the
Orlando area which you can join thru my page.

Hope this Helps

Consider everything on the market:
Alinco DJ-X10
AOR AR8000, AR8200
iCOM IC-R10
Sony ICF-SC1 (no HF coverage)
Welz WS1000, WS2000
Yupiteru MVT-7100, MVT-7200, MVT-9000

I have reviews for most of these on my site listed below.

> I have been looking at the Icom IC R10. What's the story on
> this one and is $419 a good price new.

Solid radio with very good performance. Quirky to use and
very slow scan/search. That price is very good and should
be taken advantage of ASAP since iCOM's updated pricing
after the currently available rebate will be about $100
more.

Good luck!

Strong Signals,
Rich Wells N2MCA

I've returned three scanners to them over the years. I had less trouble with CEI than any other company, and they don't charge a restocking fee... At least not *yet*. I'm sure they'll start doing like all the other mail-order vendors pretty soon though.

(now, on my soapbox)

Scanner World, on the other hand, just plain SUCKS. My brand new Uniden TrunkTracker scanner was dead. Oh well, that can happen; no big deal, I'll just return it for one that works. I phoned Scammer World in good spirits, but the person I talked to got "attitude" the moment I said the word "return." He wanted to charge me a 25% restocking fee to return a NON-FUNCTIONAL SCANNER! Think about it... A restocking fee on a *dead* scanner? What the HELL is that for? So they can add it back to their stock, then turn around screw the next poor sucker that orders it?

I still can hardly believe it... I ended up sending a brand new dead scanner to Uniden to be repaired, and of course paid the shipping to send it there. But, unlike what CEI and Scammer World charge for S&H, it only cost me about $5. Go figure.

> >

I know about the part in PART 97. As I stated this has been redefined by the FCC to pertain ONLY to the ham bands. I was asking about a Blanket ruling that pertains to other frequencies. I don't think there will be one to be found. The FCC seems to have tried to make it clear that people are NOT to use just any radio to transmitt even under emergency conditions.

3959. How to expand post 1994 Pro-2026 scanner ?.

From my FAQ article SCANNER RADIO REVIEW BRIEFS:

PRO-51 and BC230XLT IFs are 10.8 and 0.45 MHz.

BC895XLT TrunkTracker(Uniden) IFs are
380.8 or 254.4, 10.85, and 0.45 MHz.

PRO-64 IFs are 257.5, 21.4, and 0.455 MHz.

Nor is it the way that they have ever interpreted it. 97.403
only waives Part 97 rules, not the rules of any other radio
service. When operating in another radio service, which
you would be if you operated on a police frequency, you
are subject to the rules for that radio service, amateur
rules, including 97.403, don't apply.

TED:
If you will READ completely the single rule 97.403 you quoted, it says:
"No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communications needs in connection with ... when normal communication systems are not available." Be sure you have a current version of Part 97, as the wording of this one changed in recent years. I just grabbed this one from the FCC web page.
Note the fourth and fifth words, "these rules". They refer to Part 97 Subpart E, which is entitled "Providing Emergency Communications", not to all of 47CFR. Other US Governmental rules, such as 47CFR2, which includes a requirement for radio type acceptance, and 47CFR90, which establishes eligibility requirements for public safety and other license applicants STILL DO APPLY! So does the remainder of Part 97, including the amateur frequency band definitions. Also note the last phrase of your quoted section, then read 97.401a and b which define the specific conditions under which such operations may be undertaken. It does NOT alow for the "I'm too far away from a pay-phone" or "My cellular phone was out of range" excuses.

>Please mail me ,thanks
>Radioman27@aol.com
Common misconception...there is no sepereate beacon.
The radar "Beam" itself is modulated.
Even if you could modify a "radar detector" to recieve radar freqs
(X=10.525 K=24.150[at least I think so..it hase been awhile])
You would still have trouble decoding it.
With an older bel Micro-eye, you can get at the 1200MHz "if" and
actually receive the signal. Of course you have to defeat the
LO sweeper (scans the radar bands about 50 time a sec) and rig a manual
tunning (73 magazine had a artical on converting a bel micro-eye for ham
x-band use). I used a ratshack scanner and a rice burner sw to
"listen" in to x-band door openers from several MILES away.
But it was very touchy tunning. not real pratical.

C-band runs from about 3600MHz to 4200MHz, Ku starts at about 11,000MHz
to 12,800MHz.(these are close but not exact freqs, I do not have the
refference books at hand).
Most modern equipments downcoversts both c and ku to 940-1450(again
close but maybe not exact).
So no, it is not likely that you can recieve sat-tv on your scanner.
Now try tunning to 137.5 and you should bea able to hear one of the
NOAA polar orbiter weather sats. As they go over they give a nice loud
signal.

3974. HELP NEEDED FROM RADIOLAND! RE: BEARCAT BC200XLT. PLEASE READ.

Newsgroup: rec.radio.scanner
Date: 1998-08-27 00:00:00 UTC
From: Bob Esacove <mebe1@ix.netcom.com>
Message-ID: <35E58C28.3A29@ix.netcom.com>
Source record: 146107

I recently found two BC 200xlt's that I placed in storage almost two years ago. To my amazement, the batteries held enough power to turn the units on any held the original freq. imputes.

Here is where it gets tricky.

(Item 1) I can not find the Uniden ac adapters/chargers(model AD-140U). Like most people, I had some unidentified transformers.I tried one that in fact charges the batteries. Uniden makes it sound like my scanner will go Postal or self distruct if I use anything other that their approved unit.

The charger I am using is marked " Direct plug, Class 2 transformer, I/P 120V, AC60HZ-10W, O/P9V DC600MA, model41-9-600D, EIR 172-944450D. Assuming that Uniden has gotten enough of my money, can I use this charger safely? Does someone have a couple (or one) AD-140U for sale? I also want to buy PS-001 car battery accessory.

Item 2.Is there a simple way to explain to me the correct (best) way in which to program the freq (s)? Do you enter all like channels ie PD, Fire in a blank 1,2,3, moving downward? Or do you enter like freq. (s) into seperate banks moving from 1, 21,41 etc? How do you allow space for additional freqs?

I know all this must sound a bit silly to you pros. Remember when you were first getting started.

Thank you in advance for any help.
Bob

(Thanks Cathy for your help yesterday).

If you have a C band system - you can run a split from the LNB (make sure u
use a splitter that will handle 900-1450 MHz and BLOCKS DC) - you can then
tune from 950-1450 MHz and get some SCPC stations that way in wide FM mode

READ MY LIPS: I HAVE UNDERSTOOD THE POINT AND AGREE WITH WHAT YOU SAY. I said: you can only criticise that the program won't allow the freeware version to be installed again, but nothing more. Not that he decides to make money from it. That is his decision entirely.

>I can think of a lot better things to do with my time than write programs
to
>give away. The fact that you want to do it is entirely your own business
and
>you should stop complaining that people aren't more appreciative.

In that case, you have nothing to say about those who do, so that you may entertain yourself illegaly intercepting pager calls. You may aswell complain that they just came out with a new money-forging machine that killed your old one, and hey, that's not ethical...
Besides, I think that with your attitude, freeware will not exist in the end, and then what will you do? Will you honestly pay $150 for Poc32? Gimme a break. You should be as appreciative as you can, so that we keep writing freeware.
Otherwise you will have to find another hobby, or another job that gives you more money.

>What Microsoft has to do with this, I have no idea. But if you ever get
around
>to creating something like Explorer or Outlook and then give it away like
>Microsoft does, let me know. Then I could take you seriously.

You just wait until they have bought EVERYBODY out, and they start charging top dollar for all these 'free' items. I bet that you are using the Unix version, right? (Opps, Unix is a free OS, so there is no Unix version of any MS software).
Otherwise, to use Outlook or IE, you need Windows, and that is a PAY program. I think you need Windoze for ALL of MS 'free' items...so there is a point here.

>Again, you have missed the point. You should devote as much time to developing
>your reading skills as you do your coding.

Read above. You should devote some time to coding, and then come back and tell me why we are so crazy as to not charge anything for so many hours work.

>You're right, I'm not in the software development business. That does not mean
>I don't know anything about it. I don't suppose you are in the TV business
>(whatever) but you must have some familiarity with how it works.

No, but if you are in the TV bussiness, you know how much, how long, and how many people it takes to build one. And you appreciate a lot more.

>Sorry, Mike, you want to develop freeware, that's your business. Stop
>complaining about the economics or find something else to do.

Well, and if you want to use, stop complaining too. Nobody is forcing you to download freeware or shareware. You could spend $10000 on a commercial pager monitoring system.

I used to work there in Albany, and ScannerWorld gave a discount to
local public safety personnel. I always appreciated that.

Since moving, I have purchased some items from them, and always been
happy.

I have heard reports that from time to time, a lady is rude on the
phone, but never had that happen to me.

Best of all, they do not artifically inflate their shipping and
handling charges, like some other national vendors, nor do
they make claims that they cannot backup about their
company.

Overall, I will order again from them.

Ryan,

I have done the research. I have checked with the FCC.
I have asked the communications law attorney that I use.

The interpetation that they use, and the one you use, are
completely different.

At one's disposal, in reference to the part 97 use, refers to any
HAM frequency. Not to any frequency.

If you're talking about SMRs, your best bet would be one of the frequency listings on CD ROM such as Spectrum or Mr. Scanner. More than likely, Nextel will be the big kahuna and there are usually 3 or 4 "mom & pop" SMRs in cities that size. Good luck trying to find out who uses what talkgroup on these SMRs, to date there is no Police Call-like directory that lists trunked SMR users. Trunked SMR monitoring is a real challenge and it's kinda' fun.

>Beg pardon? Telephone systems operate off battery, and most telephone
>companies have trailer generators just in case.

Sorry - you didn't get what I meant. What I meant was that if telephone
service is down (even if the power is active), there is no "backup"
telephone service.

>Most Cellular towers do not depend on a phone line at that site. They
>use microwave between towers, back to a MTSO. That is where the
>phone lines come in.

Exactly, and if those lines are not usable, phone calls cannot be made.

All of the scenarios I am presenting could very well happen in 2000, as many
power companies' computers use 2-digit date systems, and if it is "00" and
the billing date was "98" (IOW, the bill wasn't even sent out yet), it will
get confused, and their power would be shut off, usually automatically.

97.4 may be a "Standard PL", but on many radios this tone is missing.
It is not present on many older Icoms (like the H16/U16 portables) for
example.

I suspect that it was a late addition to the list many years ago....

Try again, I still have my freeware version running after evaluating the newer shareware version. Sometimes a little PC experience can prevent such events from happening. Alas most problems are user problems. Even so, I dont blame the developer, it is a quality piece of software, the new routines seem to work much better. As far as a virus, if you are not isolating programs you download from the internet to protect your system, then that is your problem. Even with Microsoft releases one has to be wary.

>What Microsoft has to do with this, I have no idea. But if you ever get

Microsoft has been doing this type of practice for many years. What do you think IE4 is? The only difference is that Microsoft hasnt been able to convert the "free" software over as fast as they would like. Win98 in many ways is an attempt to charge for IE4 and beyond.

4025. World of Outlaws Sprint Car Race Frequencies?

Newsgroup: rec.radio.scanner
Date: 1998-08-27 00:00:00 UTC
From: larryj@user2.teleport.com
Message-ID: <6s2q3q$6bs$1@user2.teleport.com>
Source record: 146175

After attending several World of Outlaws Sprint Car Races recently, we noticed that some of the travelling Outlaws' cars had UHF antennas just below the big top "wing" airfoil. These are hooked to a UHF handie-talkie (a separate antenna is used when they're broadcasting in-car live video on TNN, ESPN, etc.) and used to communicate with their pit crews.

Anyone have any frequencies that the teams might be using?

Thanks,

Larry

Language police alert. Just as the word "gay" today has a different meaning than when I was growing up, so to does the word "CW". Yes it is a "word" the way we use it today in ham jargon. If I was "happy" today I certainly wouldn't say I was "gay"!! Today saying "I work CW" or "I send CW" means I send or am sending Morse code. (Even though that might not have been correct 50 or a 100 years ago.) Everyone understands this so this is it's present meaning. I don't hear many guys on the bands saying "calling any ham....calling any ham...". That's because we all understand what the word "CQ" means and use it.

If memory serves, the ruling to which the catalog refers only applies
to satellite dishes; I don't think that scanner antennas are included in
the ruling. We hams have been looking for a way around those kind of
restrictions for years; we had high hopes this would be the one, but
alas it fell short. Of course, a little disguise antenna is better than
none at all....Mike ka3jjz@erols.com

4029. PLEASE opinion AR8200 vs AR8000

Hi,
I've read some good and also very bad news about the new AOR scanner
ar8200 (it should be worst then ar8k?). However this is confusing
and therefore any opinion and suggestion would be very appreciated.
There is also Icom IC R10 ? If I missed something please let me know.
Thank you very much for the help and any information.

4030. BC895 Disc. Tap Point (it's not IC3 P9)

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: gknox@mindspring.com
Message-ID: <35e710a1.648860@news.mindspring.com>
Source record: 145927
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I've seen numerous complaints from those who have had trouble getting applications working that need unfiltered base-band audio from the BC895 discriminator.

Most people are tapping the discriminator at pin 9 of IC3 and this seems to be the problem. IC3 P9 is NOT the right place to get at the discriminator signal. The signal at that point is actually the 3rd IF output with the base-band audio impressed on it (i.e. AM). What you actually have is the desired signal, but translated to the 3rd IF frequency (~450 KHz).

This is not going to work well with most applications that require the discriminator output.

The actual base-band discriminator tap point is found on the bottom of the circuit board and is MUCH easier to get at and solder to than IC3 P9 anyway.

The signal is ~1.5V P-P riding on a 2V DC bias.

To get at it, remove the bottom cover of the radio. Orient the radio so that the rectangular silver shielded box is at the top of the radio and the rotary VFO knob is at the lower right hand corner.

The tap point is a solder pad at the lower terminus of a vertical trace about an inch long. The pad is located at a point 3.6" from the top edge of the circuit board and 2.6" to the left of the right edge of the circuit board.

I use this tap point with TrunkTrac and it works very well. Hope this is useful. If you still have trouble locating the tap point I have some jpegs I could upload if anyone has a place to put them.

Hmmmm? What's wrong with that post? I'm looking for answers for a scanner project I'm working on. Specifically, there's three questions at the end that I'd appreciate help with. Would you happen to have any input on those three questions? Here's the post again. I'm pretty sure this is the right place to post it. (This *is* a radio scanner newsgroup, isn't it?)

REPOST*******

Here's the project thus far:

Gotta Pro-2032 that I'm ready to go in and get the discrimator tap set for the baseband audio feed. I hear that's a neat thing to do. I dunno what it is; somethin' to do with "decoding" stuff. I'll figure that out after I finish this scanner interface thingy I'm building.

I'm working off this article posted by Bill Cheek posted here:

So's I go into the Shack with the above schematic and start buying resisters and capaciter thingy's. I got a really cool project box. Beige with dark plastic panels fore and aft. Matches the computer perfectly.

I hear a lot of radio shack criticism, but this lady runs this store near me and I was pretty surprised with her help.

I mean, I really needed some help with this one. I built a few power supplies for different devices I have and do a little hardware work on my PC. But just because I gotta soldering iron, doesnt mean I know *exactly* what I'm soldering. I'm just following instructions.

So, I wasn't going to get very far if I got the young, part-time employee that everyone pictures at this store.

Nope, this lady knew her stuff. But I must be her least favority type of customer. I'm pestering her with "I'm looking for this 36 cent resister and you don't have it on your shelf. Could we order it?" I'm serious. I was there for over an hour and she was working her catalogue back and forth for every ding dang thingy I couldn't find on the shelf. Some of this stuff she had, but I was too stupid to find it. She had to work. Total sale: $20.37. (That includes the $3.11 for resistors and capacitors that she had to order.) I paid credit for the stuff she had, and paid cash for the stuff on order. She must hate idiots like me. But she handled it well; although I could tell she was pissed.

I got a good handle on the box; RCA jack from the scanner going in, and a 9 pin serial plug going out to my PC. (I might rig up some flashing lights on the front to make it look *cool*!, that way if it doesn't work, I can still keep it and it'll look bitch'in! "Hey, what's that thing there?" "Uh...it's a ...freqmodulator-fibulator...module, yeeeaaah!"

My question is three fold:

1) These polarized capacitors, they're barrel shaped and have one lead close to markings on the barrel that look like dashes (------) in a broad white stripe. Is this really the negative side? The lady at the 'Shack said it was.

2) I want a Win95 recommendation for decoding software. I hear Poc32 and Pocflex are real popular. Is Poc32 what I'm looking for? Is that 32 bit?

3) Anything else I should know before I build this device?

4033. Lots of Trunk tracking questions..

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: Michael <esoterix@geocities.com>
Message-ID: <35E6F8F5.A86E6A2D@geocities.com>
Source record: 145930

Hello,

I don't have a trunk tracking scanner yet, but have a few questions before I get one.. I am familiar with the fact that scanners with the ability to track trunked systems can only work with certain motorola systems.

Lately I have been monitoring some locally trunked systems to "hear" the difference and compare what I heard with what radios I saw the businesses using. I would appreciate if someone could verify my list below:

1. Each transmission is preceeded by beeps with different tones (similar to that of an old voice paging system,but faster). As the person talks, a high pitched ring is heard and remains until the user lets go of the PTT.
Is this an EF Johnson system? I didn't hear a data signal (I got all the freq's from the new Beta FCC database search)

2. Each transmission is preceeded with a low tinny sounding "buzz", and when the party has released the PTT, 4 high pitched rings beep out. If I were to compare those rings to morse code, it would be T E E T.
Would this be a GE system? (Data signal was present.. sounds like a generator through a tin can)

3. Each transmission is preceeded with a 'honk-beep' (beep is very fast high pitched), and sometimes the radios make three quick beeps just after the honk-beep. Data signal sounds like a loud generator, with noticeable change when someone presses the PTT.
I suspect this is a Motorola system, right?

Also, can Motorola radios be used on a system such as GE or Johnson (or other)? I've seen a few local businesses using MTX2000's from Motorola, and would like to hear these.

What's better.. the latest Radio Shack Trunk Tracker or the Uniden BC235XLT? I heard from a salesperson at the Shack that all their scanners are made by Uniden, so what's the difference? BTW, I have a BC2500XLT, and really hate the NiCd that comes with it. Which of these radios can use AA's? Which do you recommend more?

Finally, will there be a new model from either the Shack or Uniden Bearcat coming out anytime soon that is worth waiting for? I'd hate to throw out money on something if a new tracker comes out that can do other systems as well.

Thanks to anyone who can help me with these questions! I really appreciate it!!

-Michael

4034. Re: Buying from CEI or Scammer World

I just bought a new 235 from National Electronics. They were courteous on the phone and sent it promptly. It arrived in a large box with "popcorn" protecting it.

Good experience:
The sales rep said it would ship same day. When he inadvertently missed the UPS drop, he actually called me back and said, "oops, it'll be an additional day. sorry."

Message-ID: <35E70A65.1B228C30@mindspring.com>
Source record: 145934

Theoretically I'm sure its possible, the military does it all the time. But what sort of power requirements would be needed for an effective jammer? And do any of the current "jammers" available function as anything but eyecandy for teens with deep pockets? I have trouble beleiving that a plastic box with LED's blinking away while plugged into the cigarette lighter is going to be effective in jamming police radar. If anybody can find any published article stating that they work past the end of your hood, I would love to read it, but in the meantime I will remain skeptical.

You might want to check out the 2level device diagram I have on my
website, it works very well for what you want and uses a few less
parts...it's also a bit easier to look at a .gif then ascii
art..anyway poc32 is the only prog that works under win95
pocflex and pd-204 are dos only programs.

4046. Dumb Antenna Question

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: Kevin Kahl <kkahl@microsoft.com>
Message-ID: <6s78as$3s3@news.microsoft.com>
Source record: 145943

Okay, this must be a FAQ. If so, please refer me to the right spot.

I want to listen to 800MHz trunked system using my new BC235XLT at work.

The trouble is, as soon as I step into my building, there's too much static on the active data channel and the scanner won't recognize it.

Well, this building is really modern and sealed up, so there's no way I can run a cable from outside to my office, but I do have a window in my office (and I'm on the ground floor).

The first thought that occurred to me was to get a glass mount antenna. Then I noticed that the glass appears to be double-paned (with an air gap in the middle).

Questions:

1. Will I be able to use a glass mount antenna through double paned glass?
2. If so, I could use a recommendation. ScammerWorld has a glass mount scanner antenna that has Mot connector (I'd need BNC adapter). They also have a cell (800MHz) glass mount, but it has a TNC connector (and they don't sell a TNC->BNC converter). Any ideas or recommendations?

4047. Problem repairing AR-8000; I screwed up

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: Colleen Cirullo <ccirullo@home.com>
Message-ID: <uNFF1.1882$_c3.8193438@news.rdc1.nj.home.com>
Source record: 145944

I was trying to repair my AR-8000 and I screwed up. I have a couple of questions that I hope someone can answer.
I was trying to tighten the BNC connector which had come loose. I took the thing apart and was able to tighten the nut that holds it on; no problem yet.
As I was taking it apart, I broke the two connections to the BNC connector. I was able to resolder the connection to the shield but the connection to the center lead of the BNC is sheared apparently beyond repair. Soldered right onto the center connector is a small white tubular element that I thought was a capacitor. It is a small white tubular thing that connects the BNC to the input stage of the scanner. The lead coming from this is broken right at the element itself and there is nothing to resolder this to.
What is this element? I assumed it was a capacitor or inductor, but my DMM gives me no value for inductance, capacitance or resistance from this. Can I replace this with a bare wire? And if I do, how will reception suffer? Can I replace this with anoth capacitor/inductor/resistor? With what values?

Thanks,

PC

Kevin,

I currently use a glass mount cellular antenna (actually Radio Shack's scanner
antenna with a cellular whip) in my trunk and it works very well. However I suspect that if there is too much of a gap there may not be enough coupling between the antenna and the pickup on the other side of the glass. The good thing about using RS's antenna is that I can put the original whip back on for
listening to other bands.

For using the trunk-tracker around the house I made an 800Mhz ground plane that
fits on the scanner. You might try this or just getting a better antenna. I found
that the antenna that came with the scanner does not work very well for 800Mhz.

That could be a solution, too.

>Now YOU may be the one who is surprised to know what is available out
>there. The autopatches with which I am familiar (RC-850) allow
>programming of variable timeouts for different types of phone patches.
>This technology was implemented in my area at least 10 years ago.

No, not really surpirsed. My repeater has an RC-96 on it and has
several patch configurations. Another controller I have will autodial
a preset number if it gets 5 clicks of PTT.

>I understand EMD, but don't think it really applies to the typical
>passing motorist situation. You'd be crazy to give prearrival
>instructions to someone at the scene of an MVA (or a shooting) who may
>not have the equipment or capabilities to deal with the larger

>appropriate.

A passing motorist wouldn't be offered PAIs because he/ she is no
longer on the scene. If the scene is safe, why not? (Of course, the
determination would have to be made about scene safety)
.

I've been on these newsgroups only for a short time, but the first thing I've learned is not to get too upset about criticism. If we can come up with some concensus, we may have some workable solutions.

We've been cross-posting from "firefighters", "law enforcement" and "scanners." I am subscribed to the "firefighters" group and I'm sure we're boring the heck out of a lot of the group with this topic. I'll have to subscribe to amateur radio and just continue it there.

> Is this an EF Johnson system? I didn't hear a data signal (I got all
>the freq's from the new Beta FCC database search)

that is a General Electric MARC V system. there is no control channel.
all the logic functions are in the radios and they scan for available
channels and select an empty voice channel by themselves. the high pitch
tone is a connect tone (like SAT tone on cellular systems or PL tone)

>2. Each transmission is preceeded with a low tinny sounding "buzz", and
>when the party has released the PTT, 4 high pitched rings beep out. If I
>were to compare those rings to morse code, it would be T E E T.
> Would this be a GE system? (Data signal was present.. sounds like a
>generator through a tin can)

that is a Ericsson/GE EDACS system.

>3. Each transmission is preceeded with a 'honk-beep' (beep is very fast
>high pitched), and sometimes the radios make three quick beeps just
>after the honk-beep. Data signal sounds like a loud generator, with
>noticeable change when someone presses the PTT.
> I suspect this is a Motorola system, right?

right. the three (or more) beeps are actually picked up from the radio's
speaker. When you press the PTT button the radio beeps until the the
system switches it over to a voice channel.

> I looked at both of those, but decided against them because I would have to
> remove them before driving into the garage. So I went another direction
> completely.

I picked up a "splitter" from C Crane that uses the vehicle's antenna for both AM/FM and Scanner. Now it cuts down on the FM fringe signals, but the Scanner Performance is OK. The added advantage is being able to drive down the highway without anyone even suspecting that I have a scanner in the vehicle. I can hide my RS mobile scanner in the center console if I have to for security or other purposes.

Often times Phx PD will Pull the patch link to the UHF freq if they are working
a major incident. That may be the problem in this case.
I happen to live in a dead area for Chase1 UHF so i can only ever hear them on
the vhf side.

Sometimes it takes a day or so for them to remember to reestablish the patch

hope this helps!

serial (no@e.mail) wrote:
: as an aside....the ministry of health lifeflight chopper freqs would be appreciated as well

In eastern Ontario, the MoH helicopters use the provincial common frequency 150.1000. The ministry's dispatch centres are supposedly using 129.2750 and 132.5500 (I think), but I suspect they are mostly for fixed-wing operations, which are not common in eastern Ontario so I couldn't say for sure. In this area helicopters are not frequently used for emergency calls, and as such simply use local tower frequencies to navigate on patient transfer flights.

A dummy load and a watt meter? Better yet - a service monitor will simulate the real world quite well for testing power, modulation, etc.

I have two radios set up for "out of band" tx. A modified handheld makes a great piece of test equipment. Beats the heck out of lugging a service monitor around if all I need is a signal source for quick checks.

I think that if I was ever in a situation where I needed urgent assistance and I was not able to reach another amateur station, I would NOT try to find a public safety channel to make a call. While it may only work in coastal regions, my first alternate to amateur freqs would be 156.800 - an internatonal distress frequency for any mobile station. The people monitoring that frequency expect to here from "the public".

I carry my handheld with me on my boat. I don't sped much time "hamming" on the water so it often stays in storage, with my cellphone. But if my "real" marine VHF radio quit, I like knowing I have a backup if I really need help. The kinds of things that might make my regular marine VHF quit are the kind of things that might require a distress call. I don't use it for routine marine communications, I wouldn't hesitate for a second using it to send, or even relay, urgent or distress calls.

I'll also mention my experiences with emergencies... The only times (twice) I have ever been in a places where radio service was scarce and I had to call for help, amateur radio was only thing that DID work... and it was 440MHz that came through both times.

I have done this
underwent a police, state ag, and fcc investigation
there was no cell phone or OTHER phone avail
NO cb avail and was not inrange of a LOCAL REPEATER
and no one else on the hiway when i came upon a wreck
and it was on fire, after i got the people out
i used my ham ht and tuned in to local HIWAY patrol
freq (150 something) and called they answered and told me to clear
the freq until i told them they prob
they then dispathed a unit and a fire unit and a ambulance
took about 3 weeks for all investigations
and they concluded (all agencies) that i did the right thing

4058. Need advise on antenna installation

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: Bob Esacove <mebe1@ix.netcom.com>
Message-ID: <35E74215.4594@ix.netcom.com>
Source record: 145955

Just installed an Archer (Radio Shake) cat. no. 20-014 antennia on 40" mast. I am using a BC200XTL w/50' RG-58 coax cable. I worked my butt off and frankly I don't see a difference in the reception except that I am getting a lot more static.

Is this type of antennia directional? Is there a smart way to adjust or rotate for best performance? Will grounding help cut static? I thought an antenna was going to be a real plus but now I have my doughts.

Thank you Bob mebe@ix.netcom.com

4059. Need advise on antenna installation & performance

Yes and no. Most laser detectors have a very limited range and
require the goofy cop to act like a robot as he aims the device
somewhere along the body of your car. They are so dumb looking using
those radar "bread boxes" and "parascopes".
And most police depts cannot catch enough speeders to pay their bills
with these devices so the stick with the tried and true x and K band
microwave devices that give cops cancer!

> the car from road debris [stones] damage]

Oh, but there are ways! I have several articles on how to jam police
radar, and its not that hard to do since their units are very low
powered (but they still give cops testicular cancer!).
And, if your car is very sleek, the license plate may be the only thing
he will get a hit off of. Think in terms of stealth planes and how they
either absorb radar, or they deflect it back at angles which will not
allow the radar to return to the sender.
First thing you must do is (on a sleek car) put some washers behind the

top screws on your front license plate so that the angle of the plate is no longer flat and pointed straight ahead. The washers will point the plate more towards the ground. Use only a 2 to 4 on each of the two top screws and space the plate out from the car.
Next, look for surfaces on the body of the car that are flat and pointed forward. Those will reflect radar greatly. Do what you can to change those surfaces so that their angles are pointed down or up rather than to the side or forward. Get a great detector and when on the road, always always use at least a hand held cb.

Sure Bill, be glad to help,

First, I went to Radio Shack & picked up a 3/32 plug. I then soldered a wire to the center lug & did the math. 234/freq. in Mhz X 12 = length of wire in inches. eg...234/155.000=1.509X12=18.1 inches.

Don`t worry `bout getting too picky on length. Somewhere around 15" to 20" will pick up a TON of different frequency bands. The wire fits great under a belt.

Just one thing, if you get into a frequency "jungle", start snipping the wire shorter to pick up just the close-range freq`s.

Good Luck,
Charlie

This is just what I was going to say, If you just want the local
Police/fire/emerg stuff, the glass mount, would be fine (looks nicer too).
I tried them both and the mag did pull in many more week signals than the
glass mount. I put a splitter on my new Lumina, shares the car radios
antenna. Seems to work just as well as the mag mount in the 150 mhz range.

The antenna design is essentially a J pole type and I have had good luck with that antenna in the past. I used to bring it on VHF/UHF DXpeditions and used it with my 2006. I found it to be a good performer on VHF Low and was worse the higher in frequency I went.

The antenna is not really directional but if convenient you may try moving it around especially if you are close to a power line.

Although I am not sure about the 200XLT sometimes handheld scanners do not perform as well with a outdoor antenna, in fact they can be overloaded.

Grounding may help although I have none of the antennas in my antenna farm grounded and have no trouble. I have tried grounding with little or no difference in performance.

I have found the most durable and best performing directional antenna to be the Grove Scanner Beam. If you want an omin directional antenna the try the discone style, RS has one. Although the discone style tend to be very fragile. The Scanner beam has made it through 8 Minnesota winters and several nasty thunder storms etc. and has survived well. A discone rarely makes it through a winter without damage.

Date: 1998-08-28 00:00:00 UTC
From: Mike Derryberry <michael.derryberry@MCIONE.com>
Message-ID: <zFLF1.191$o62.91634@news.mci2000.com>
Source record: 145973

The main problem with this set-up is the cable being used. 50ft of RG-58 has a large amount of loss. Try using a good quality RG-6. RG-6 is 75ohm versus RG-58 being 50ohm but that is negledgable. Use good quality cable (satellite cable works good) with "F" connectors and the correct adaptors. You will be amazed with the difference.

I just changed out 50ft of RG-8 with 50ft of RG-6 and I now hear things on 800 & 900mhz that I couldn't hear before. It works, give it a try.

Good luck ...

Mike

Language police alert. Just as the word "gay" today has a different meaning than when I was growing up, so to does the word "CW". Yes it is a "word" the way we use it today in ham jargon. If I was "happy" today I certainly wouldn't say I was "gay"!! Today saying "I work CW" or "I send CW" means I send or am sending Morse code. (Even though that might not have been correct 50 or a 100 years ago.) Everyone understands this so this is it's present meaning. I don't hear many guys on the bands saying "calling any ham....calling any ham...". That's because we all understand what the word "CQ" means and use it.

>Does anyone know if radar jammers which you can buy actually work?

A couple of years ago a friend of mine brought me a "passive jammer" called a "Spirit". Seems it was supposed to transmit white noise in the radar spectrum to desense the police radar. He wanted me to reverse enginner it so "we"(me) could build some. The first thing I did was to try it out, he swore by it (works great he said). Well, as luck would have it my father is a deputy sheriff, and he was as curious as I to test this "great device". Well, to make a short story long, It didn't work. My Dads handheld Falcon K-band radar locked on to me instantly at various distantences and speeds. Haven't tried the Phazer, but if someone brings one I will. Hope that helps.

AR8000 comes with carrying case(not leather) only. $550

2006 w/OS456 is my pride and joy works fine. No box, just the radio and board. $500.

Take both for $900.

I love my radios, this a GREAT combo for computer-controlled scanning.

They gotta go.

The definition of "installed" seems to be left to the interpretation of the
judge. Some judges consider a handhled plugged into the cig. lighter installed.
Remember though, a police officer can cite you for having scanner, if it makes
it to court is another thing all together. You will still have to fight to get
your scanner back. Normally enforcment of this law is for idiots that show up
tocrime scenes and cause problems, or use the scanner to evade police in the
commision of a crime.>HTML>

Can DJY send me his message on Motorola radios directly?

Does anyone in VIC have a Motorola AP50 for CFA scanning? Do you think
they are good?

>>> In Florida it is legal to use a scanner in a car as long as it is not
>>> "installed," the definition being connected to both an external antenna
>and
>>the
>>> vehicle's electrical system.

This definition of "installed" was issued by the Florida Attorney General's Office after the Florida Press Association asked for clarification. At the time, the media was not exempt from the statute. That was corrected with an amendment the following year.

Has anyone tried using Ten-Tecs T-Kit Universal 455 KHz BFO on the 2006 for SSB reception? If so please post and let me know how it worked. It seems like it would and would be much simpler than using a SSB Short Wave receiver inline with the scanner. Just a thought. Please reply here. Thanks ahead of time. Dennis KB8SOJ.

MICROSOFT OUTLOOK EXPRESS

KNOWN ISSUES IN THIS RELEASE

TROUBLESHOOTING

TIPS AND TRICKS

SUPPORT FOR MICROSOFT OUTLOOK EXPRESS

MICROSOFT OUTLOOK EXPRESS
=========

Outlook Express Mail is an Internet standards based e-mail and news
reader.

To read e-mail with Outlook Express, you must be using a mail system that uses SMTP and POP3 or IMAP protocols. At this time, you cannot use Microsoft Outlook Express to access your e-mail account with any of the following services: MS Mail, cc:Mail, CompuServe, America Online (AOL), or Microsoft Exchange Server prior to version 5. If you don't know whether your system uses these services, contact your administrator or your Internet service provider and ask if they support SMTP/POP3 or IMAP mail clients.

You can also use Microsoft Outlook Express News to read bulletin-board discussion groups, such as the Usenet, using NNTP-based news servers. Contact your Internet service provider or network administrator for the name of the news server that you should use. Outlook Express News can also be used to receive support for a variety of Microsoft products on the news server msnews.microsoft.com.

KNOWN ISSUES IN THIS RELEASE
============================

- When receiving a message using a GeoCities mail account, you might be unable to view any of the original message, or you may see only the following information: Postage Paid by... [graphic].

- You will not be able to see embedded objects or images sent from people using Microsoft Outlook, Microsoft Exchange, or Windows Messaging. File attachments work fine, however.

- If you use HTML in your signature, and you send the message before any included images have finished drawing, the text you add to the message may be lost.

- Some mail clients send Cyrillic messages with tags indicating that they are in a western European character set. As a result, Outlook Express uses a western-European font to display the message, which then appears garbled. To work around this problem, click the View menu, click Language, and then choose a Russian character set, such as K0I8. The message should display properly using the Russian font.

- Inbox rules are not available for IMAP accounts.

- If you are using Outlook Express with a SUN Solstice, Netscape, or Innosoft IMAP server, it may cause your server to stop responding. Please contact the 3rd party provider for an update to the IMAP server software to correct this problem.

- Outlook Express S/MIME does not verify the status of digital IDs before sending encrypted or signed messages. This means that a digital ID that is revoked, expired, not trusted or that has an incorrect e-mail address will be used without providing any warning.

- To send signed messages and receive encrypted messages, you must have a digital ID. Currently, the only way to get a digital ID for use with Outlook Express is to use Internet Explorer 4.0 and go to the Verisign Web site, http://digitalid.verisign.com.

- While sending and retrieving messages, closing Outlook Express and restarting it will cause Outlook Express to crash.

- In Outlook Express News, if the option "Get 300 headers at a time" is turned on, the following commands: Get New Headers, Get New Messages, Get All Messages, and Get Marked Messages will retrieve only 300 (or the number that you specify) headers at a time. To prevent this, you should turn off this option.

- To cancel a news message, you must be using the same message encoding options as was used for the original message.

- If no folders are displayed for your IMAP server or if you want to refresh the list of IMAP folders you need to download the folder list from the server. To do this, select the IMAP server. If you connect to the server by using a modem, click the Tools menu, and then select Offline > Dial. If you connect to the IMAP server by using a LAN, you can skip this step. After you have connected to the server, click the File menu, click Folders, and then click Refresh Folder List.

- If you need to change any of the following settings for your IMAP account:

. IMAP server name or port number
. Account type (POP3 or IMAP)
. Any logon information

it is recommended that you delete the IMAP account and create a new account with the updated settings.

- Outlook Express is designed to work only with IMAP4 compliant servers. IMAP2bis servers are not supported in this release.

- If you rename a news server account name and then attempt to perform some action on it, for example copying messages from the server, you may receive an error message. To work around this problem, close OE and restart after the renaming of a server.

- If encrypting a message when there is not a certificate for one of the recipients, an error will display stating that there is not a certificate for that recipient as well as the sender.

- Certificates are now handled on a per account basis. You must reselect which certificate to use for each account from the Accounts menu. Select the account you want to configure for security features and check the box to use a certificate when sending secure messages. You must also click the Certificate button to select which to use.

- If you used Internet News for reading newsgroups, any messages in your "Posted Items" folder will be moved into the "Sent Items folder when you upgrade to Outlook Express.

- Outlook Express only shows subscribed IMAP folders in the folder list. It no longer shows all your folders (subscribed and unsubscribed). If you want to see all your folders in the folder list, you should subscribe to all your folders. Click on the "File" menu, then click "Folder >" and select "Subscribe All Folders" menu. If there are folders that you don't want to displayed in the folder list, you can unsubscribe the folder. Click on the File menu, click on Folder >, and select "Unsubscribe Folder".

- If you send a Rich Text (HTML) message which contains embedded pictures and the option to "Send pictures with message" is turned off, any pictures from a local computer or LAN will not be viewed when receiving and reading the message using Netscape's Messenger.

Note to French users

In order to comply with the French laws on the use of encryption material, S/MIME support in Outlook Express has been disabled when used in France. However, SSL 2.0 and SSL 3.0 support is authorized, and hence left enabled.

TROUBLESHOOTING
===

- If you run into a problem, try the troubleshooter in online Help or on the Microsoft Web site at http://www.microsoft.com/support/tshooters.htm. To start the online Help troubleshooters, carry out the following steps:

1. In Outlook Express, click the Help menu, and then click Help Topics.
2. Double-click the "Troubleshooting" topic on the Contents tab.

- Check your connection to your Internet service provider.

- If you are unable to send or receive mail, check the following:

- The TCP/IP protocol is installed on your computer.
- All cables are properly connected to your computer, modem, or LAN.
- You have a PPP or SLIP account with your Internet service provider.
- Your Internet service provider or LAN server supports POP3 or IMAP and SMTP.
- Your modem communication parameters (baud rate and type of protocol) are set correctly.

- Make sure that you use an account name and password for a news server only if it requires them. If you use an account name and password and they are not required, you will not be able to connect to the news server.

- To access the Microsoft peer product support newsgroups, carry out the following steps:

1. Click the Tools menu, and then click Accounts.
2. Click Add, and then click News on the drop-down menu.
3. Follow the directions on your screen.
4. When you are prompted for a server name, type
msnews.microsoft.com

If that name isn't found by your Internet service provider, you
can type 131.107.3.27 instead.

You do not need to log on to this news server.

TIPS AND TRICKS
==========

- You can change the sound that notifies you that you have received
new mail. To do this, double-click the Sounds icon in Control
Panel, and select New Mail Notification from the events list.

- Use the Check Names command, available on the Tools menu or on
the New Message toolbar, to look up a person's e-mail address
when sending mail. The name will be underlined when the
associated address is found.

- You can move the toolbar to a different edge of your screen by
right-clicking it and then choosing Left, Right, Bottom, or Top
from the Align menu.

- To send a mail message in Plain Text only (no HTML formatting),
click the Format menu, and then click on Plain Text. To make Plain
Text the default setting for new messages, replies, and forwarded
messages, click the Tools menu, click Options, click the Send
tab, and then select Plain Text under Mail sending format.
(News messages are sent in Plain Text by default, but similarly,
this setting can be changed under News sending format.)

- To customize the toolbar, right-click it, and use the menu commands
to perform the desired actions.

- You can resize the preview pane or the message list by dragging the
divider between the preview pane and the message list.

- You can change how the preview pane splits, or turn it off entirely,
by clicking the View menu, clicking Layout and changing the options
in the dialog box.

- You can specify that you want to see only unread news messages. To
do this, click a newsgroup, click the View menu, click Current
View, and then click Unread Messages.

- You can set messages to automatically download to the preview pane
by clicking the Tools menu, clicking Options, clicking the Read
tab, then selecting the Automatically Show Messages in the Preview
Pane check box.

- To view the e-mail address of someone who has sent you a message, double-click the message to open it, then double-click the author's name in the From field. You can also add this person to your Address Book by right-clicking the name, and then clicking Add To Address Book.

- To view responses to a particular message in a newsgroup, click the plus sign (+) next to the message. The responses appear indented below it.

- In mail, you can leave a copy of your messages on the server. To set this option, click the Tools menu, and then click Accounts. Select the mail account you want to modify, and then click Properties. Click the Advanced tab, and then select the Leave A Copy Of Messages On Server check box.

- You can search for newsgroups that contain specific words in their names. To do this:

1. Click the Tools menu, and then click Newsgroups.
2. In the Search box, enter the words separated by a space.

You can also search newsgroup descriptions. If you cannot see the descriptions, click the Tools menu, and then click Accounts. Select the news account you want to modify, click Properties, and then click the Advanced tab. Next, select the Use Newsgroup Descriptions check box.&#65533; Click the Tools menu, and then click Newsgroups.&#65533; In the Newsgroups window, click "Reset List."

- You can have your signature added to all messages, including those that you reply to or forward. To do this, click the Tools menu, and then click Stationery. On the Mail or News tab, select the following check box: Add Signature To The End Of All Outgoing messages.

- It is possible to use HTML files as signatures as well as plain text files.

- To reorder columns, you can drag and drop column headings. Columns can be resized by dragging the right edge of the column header.

- You can view all the headers for a news message. To do this, double-click the message to open it in a separate window, click the View menu, and then click Full Headers.

- If you are running Outlook Express on Windows NT and you need to add support for a different language, double-click the Keyboard icon in Control Panel, and then click Add. Follow the instructions on your screen. This installs the appropriate NLS (National Language Support) files. You do not have to use the associated keyboard layout.

SUPPORT FOR MICROSOFT OUTLOOK EXPRESS

It is against the LAW to modify any amateur transceiver to operate out of band unless you are a MARS or CAP member. Otherwise the radio is not FCC type accepted or approved to operate on the public service frequencies. You can only use the radio for amateur and MARS or CAP if licensed.

Also in a number of other posts you have agreed that operating out of band is against the LAW and you can be punished for that. Even in an emergency. Why now change your mind. That talk to the FCC engineer didn't get through you 15 year skull?

It is still against the law to use those modified radios on public service frequencies if they are not type accepted or approved. Why can't you get a commercial radio for those purposes. I have been able to get a Motorola 800 trunk radio for $175 so I can use it on our system. They are not expensive and would make you legal. Also the ones that are using these modified "HAM" radios are authorized to be on those frequencies and what we have been talking about with this thread is someone not authorized to do so....

Andre,

I recently went through the same process. I had been using a CB antenna for my scanner and decided to upgrade. I ended up getting a Hustler (magnetic mount) designed for scanners (mobile). I went with the Hustler because someone in this newsgroup recommended it over RS. Its performance is definitelty much better than the CB antenna that I was using. It costs the same $29.95 but the place I bought it charged me about $4-5 for shipping and another $4-5 for handling. If you want their URL let me know and I can look it up. I will tell you that I had a hard time trying to find a place on the internet that sold this antenna. Perhaps if you have access to a radio store it might be easier for you to get this antenna.

I have the Magmount and it works good for me over the last 2 years. It's never blown over and because it's a magmount, I can take it and put it in the trunk if I want too. The glass mount is more permanent and I've seen posting here in the past where they aren't as good.

John Habbinga wrote in message <6s58ao$1lg$1@news4.wt.net>...

First truly constructive idea on this thread yet. Seems like the ideal situation... emergency autopatch access, no CTSS, etc, no time out, 911 access and only 911 dialing, done automatically, etc.

I think we need some regulatory changes for this to be at it's greatest practicality, though. As it stands now, the repeater owner could be liable for hoaxes. Maybe we need a standard protocol for emergency repeaters, and those complying be held blameless for hoaxes, with sole responsibility resting on the originator of the call.

This would make clubs and individuals less reluctant to set up such a system, and ensure that everyone would know how to get help in a stressful situation in a hurry. When there are lives at stake is no time to be consulting the repeater directory. One or two frequencies per band, a standard shift, etc would enable manufacturers of transcievers to include a "911" button that automatically tries to key up any emergency repeater/autopatch and do whatever must be done under the protocol to connect to a landline 911 dispatcher. Simultaneous pressing of a FN or CTRL key with the 911 key could be a way of preventing accidental use of the system.

Given careful thought on the details, I think a workable universal system could be standardized and implemented that would answer the need for "no matter what" 911 access. Any other thoughts on this?

Hey... beats the hell out of arguing whether or not it is okay to call the sherrif on your HT!

Sorry... CW is not the same as spark... Spark and CW both normally use Morse Code, but CW does not refer to Morse or any other code,,, CW stands for Continuous Wave, a new-fangled mode that used up much less bandwidth than old fashioned Spark. CW and Spark are modes... Morse is just a code used for those modes. Like the difference between English and SSB, or Spanish and FM.

CW does not equal On-Off Keying. Yes, they are closely associated. No, they are not the same thing.

Wanna build a spark transmitter? hook a battery to a file and a piece of wire. scratch the wire across the file. Listen on a nearby radio. Now build a tank circuit and filtering, match this to an antenna, and listen. Check out how wide the signal is. It will be much wider than CW. That is why CW completely replaced Spark.

By the way, the above experiment is strictly illegal if you exceed part 15 power levels, about 100 mw unless I am mistaken, though I suppose you might use such a scheme for an emergency transmission with a car battery or something. Hope this clears the fog.

Please do not post binaries. It would have been better to place it on a
website and make a link to it.

I've learned *my* lesson the hard way, and I think you'll learn yours.

I can no longer pick up Phoenix Police channel 1 at 453.1. Did they move or is it my Pro-46? I don't seem to have trouble with any other freqs that have been programmed in for the last 3+ years.

Thanks
Al

CW does not mean morse code. CW *does* mean continuous wave -- a
narrowband, (nearly) sine-wave, carrier, as opposed to the broad hash of RF
generated by a spark set using damped waves.

You can modulate either CW or spark by morse code keying, but an unmodulated
CW carrier is still CW. In common ham usage today, CW is synonymous with
morse code, but common usage is sometimes kinda sloppy.

I use a glass-mount antenna out of necessity (except for the hood and rear quarter panels, the car body is made of composite materials). It works pretty decent, but I would bet that a good mag-mount would outperform it in weak-signal areas.

>
>Does anyone know if radar jammers which you can buy actually work?
>And are they legal? The most common one I have heard of is the
Phazer.
>
>Thanks.
>
>
I saw a demo once of a "jammer" that consisted of a surplus "real"
police radar rf unit. A guy feed white noise into the the voltage
refference (used a uA723) and tried to stop a cooperative police mans
radar from working. It just did not work. He then tried using
different tones (the shift is 3.4Hz/mph{i think} [for x-band/10.525]).
The goal was to lock the police unit to the louder tone from the x band
af modulated source. No effect. However when the police turned up
the audio (some, maybe all radars allow the office to listen to the
return audio) the white noise and tones simply screamed. There was no
way for the officer NOT to tell which vehicle was the source.
No I do not know how much power real radars run, but I suspect that
the run much more than the "phazer".
Car and driver ran an article on how to jam a LIDAR. Pretty much the
same story. All they could do was to reduce the distance at wich they
were clocked. There best methode invlolved WWII "snipescope" IR filters
over driving lights. Hardly worth the effort.
Of course there was that "stealth bra" from some dude out Colorado way
that "absorbed" radar. Made the news about 6 years ago, but I never
saw a review of how weel (if at all) it worked. [a "bra" for a sports
car is a plastic/cloth form fitting gismo that goes over the front of
the car [with cut outs for headlight/trunsignals text] to protect
the car from road debris [stones] damage]

Hi all,

Otto is now in it's version 1.2. There have been bug fixes and other
upgrades, like adding a toolbar and overall improvements.
Take a look at http://www.eurohubner.com/mike/soft_otto.html

Otto is a 32-bit download & data management tool for the Optoelectronics
Xplorer and Scout. And it's freeware.

Cheers,

Mike Puchol

I read a similar article about reducing the effectiveness of the Laser systems. If I remember correctly the three things they said were most effective were driving with your high beams on (creates more IR "noise"), attaching a special light green filter on your license plate(s) (absorbed or blocked IR light), and having a sloped composite nose on the car (ie. Firebird).

I had also found an article about radar "jammers". I don't remember the details of the article, but if it had been a positive review I would have bought one by now.

I only stated that amateurs have used radios since the 1800's. It's possible that the statement regarding their use of exclusive CW was incorrect.

HOWEVER, amateurs DID have radios at this time that DID transmit and receive Morse code, be it Spark, CW, or any other mode. This is what I meant, and what I should have said in the first place.

4132. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35e7068b.1204905@news.iaw.on.ca>
Source record: 146046

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

4133. Put our scanner banner on your site/Make $5 per sale

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <1998082801301100.VAA27444@ladder01.news.aol.com>
Source record: 146047

Here is how it works.

1. You place our banner on your web page. This
will consist of a banner gif Picture of our DS49 Speech Inversion
Descrambler and text advertising it.
Once you place this banner on your
page you are done. There is nothing else to do. You are
given a number that goes after the Descrambler model number
right on the banner.
ie... DS-10. When someone calls us to order
with a credit card or orders through the mail using
your number, you earn a $5.00 royalty for that sale.

2. Royalty checks will be mailed at the end of each quarter.
ie.. end of March/ June/ September/ December.

3. You can email us at any time for an update of your sales.

4. Sales will greatly depend on the amount of traffic your site
gets daily, so increasing your site traffic through search
engine registration and link exchanges will help us both.

5. For each sale where the customer does not remember the model
number, ie... DS-10 we will asign the sale to the next
name on our list of program participants. This way eventualy
you will get credit for a sale even if the customer cant
remember the model number.

That's all there is to it.

If you are interested in participating in the CTP
royalty program Email us with your name, mailing
address and web url and we will email you the banner.

Thanks for your time.

I have been told by one of the radio techs in the area that the new system they just installed uses the RDLAP 9.6 protocol with Motorola MDT-9100T terminals.

It sounds like MDC4800 to me, but I've never heard RDLAP before to compare. I would appreciate it if someone could send me some samples of both MDC4800 and RDLAP.

And... Are there any decoders available for RDLAP anywhere?

Thanks.

Forgive me if this is off-topic-

Does anyone know if radar jammers which you can buy actually work?
And are they legal? The most common one I have heard of is the Phazer.

Thanks.

4140. mobile scanner antenna

Newsgroup: rec.radio.scanner
Date: 1998-08-28 00:00:00 UTC
From: Andre Konstantinov <konstan@worldnet.att.net>
Message-ID: <6s54td$eed@bgtnsc01.worldnet.att.net>
Source record: 146054

I am thinking about buying a mobile antenna and am now trying to decide between two Radio Shack antennas -- one is a glass-mound and the other has a magnet mount and two coils in the middle, both are $29.95.

Two questions:

1. Are the glass-mount antennas any good, or should I go with the one that has 2 coils?

2. my car roof is vinyl, so I have to put the magnet antenna on the trunk -- would that affect my reception dramatically?

Thank you
Andre

4141. BC-3000xlt Mods...anyone?

I bought the 895 from national and had an absolutley clean transaction. This was my second internet transaction and I was worried. The first one some would be con artist tried to rip off a whole bunch of people on e-bay for $400 for a cd-rom burner. He shipped an $80 scanner to all of us. We were all lucky since this guys father was a sys admin at the ISP the e-mail was sent from. That and the fact he accepted checks and money orders sent through the post office constituted mail fraud. He was sh-ting that we got him so quick. Half of us made our livings with computer networks. I got my scanner at 8AM and his father was contacted by another guy from our group at 1 o'clock in the afternoon.

Sorry about the spiel...it's the first I've recanted this experience and it felt good..... we really had the guy scared.

Anyway ..National was a very pleasant experience for me....I can't say much about the speed of UPS or the accuracy of their tracking system, but UPS showed that they recieved my order the evening that I put it in. Their inaccuracy came when they said it was still in a depot 35 miles away (as opposed to the one 2 miles away) and my roomate had already signed for it.

Good luck

Roy

PS. I consider CEI's shipping rates insulting and wouldn't use them even if I could save a few bucks on the transaction. They offer free earphones with some scanners, but charge 12 to ship them. One individual said they were pretty cheap earphones.

This is probably a stupid question, but what would happen if
someone were to travel through all the States and they weren't
familiar with the laws in each? (E.g. if I were to travel down
there.) Would I have to somehow know all the different laws in
every single state? If I didn't, would I be fined for not
knowing them? -- Alleycat

So's I go into the Shack with the above schematic and start buying resisters and capaciter thingy's. I got a really cool project box. Beige with dark plastic panels fore and aft. Matches the computer perfectly.

I hear a lot of radio shack criticism, but this lady runs this store near me and I was pretty surprised with her help.

I mean, I really needed some help with this one. I built a few power supplies for different devices I have and do a little hardware work on my PC. But just because I gotta soldering iron, doesnt mean I know *exactly* what I'm soldering. I'm just following instructions.

So, I wasn't going to get very far if I got the young, part-time employee that everyone pictures at this store.

Nope, this lady knew her stuff. But I must be her least favority type of customer. I'm pestering her with "I'm looking for this 36 cent resister and you don't have it on your shelf. Could we order it?" I'm serious. I was there for over an hour and she was working her catalogue

back and forth for every ding dang thingy I couldn't find on the shelf. Some of this stuff she had, but I was too stupid to find it. She had to work. Total sale: $20.37. (That includes the $3.11 for resistors and capacitors that she had to order.) I paid credit for the stuff she had, and paid cash for the stuff on order. She must hate idiots like me. But she handled it well; although I could tell she was pissed.

I got a good handle on the box; RCA jack from the scanner going in, and a 9 pin serial plug going out to my PC. (I might rig up some flashing lights on the front to make it look *cool*!, that way if it doesn't work, I can still keep it and it'll look bitch'in! "Hey, what's that thing there?" "Uh...it's a ...freqmodulator-fibulator...module, yeeeaaah!"

My question is three fold:

1) These polarized capacitors, they're barrel shaped and have one lead close to markings on the barrel that look like dashes (------) in a broad white stripe. Is this really the negative side? The lady at the 'Shack said it was.

2) I want a Win95 recommendation for decoding software. I hear Poc32 and Pocflex are real popular. Is Poc32 what I'm looking for? Is that 32 bit?

3) Anything else I should know before I build this device?

A radar jammer may work on standard radar, but not the new laser radars. In order for the radar detector/jammer to work they need a steady signal. Most radar officers are trained to use the radar only when they have spotted a speeder. They have to make a speed estimation and then they turn the radar on. By the time the radar detector picks up the signal you have been clocked.
As for the new laser radars, they are almost impossible to detect. The beam is so fine and it has to be aimed directly at the detector for it to work. Again the officers are being trained to aim it at lower portions of the car, such as the license plate.
Your best bet is to learn the common hot spots for speed patrols. Also watch the side of the road when you are driving, you may be able to see the police car before he sees you.
Hope this helped.

This is great! Excercising your right to trash a bad company...or what
sounds like a bad co. I've never had dealings with them.
It's great to see pressure brought to bear on these less than honest
companies.
Next time you're on the phone with them (if ever) tell them you will be
posting all over the Internet your experience with them...It's not libelous
as it is YOUR account of what happened.

Good luck....

You only note one thing but say you noticed a few things. Just out
of curiosity, what were the other things you noticed. Whatever they
were, I hope they didn't take your attention off that awesome antenna
for too long. Keith

Hosehead's got the official WoO frequencies and some of the drivers:

http://www.epix.net/~hosehead/pagez.html

If you're not familiar with this page, it's run by Allan Holland, out of Hazelton, PA, and is *the* place for sprint car info and news on the web. Look at the links section near the bottom of the main page for his frequency stuff.

Today, at least around here, the store manager can basically run his/her store as they see fit. Training and knowledge levels do vary widely (a few stores I know of that are run by hams do real well in both knowledge and customer satisfaction). For the most part, managers can hire who they want. The real problem is that Tandy is not willing to pay any real money to either the salespeople or the manager - they all work for pitifully little money. The manager has no authority to decide what to pay, and the district managers have no authority to decide what to pay the managers.
Anyone who does well at RS - or knows the electronics business - doesn't stay long because they can make far more money elsewhere. One thing that Tandy definitely never has learned is that in order to get and keep good people, you have to treat them decently and pay them what they're worth.
